Good Chance At Sweepstakes

Spearman High School's Music department again gathered the top honors at the Tri-State Music Festival in Enid, Okla., Wednesday through Saturday.

Both the High School Choir and Band earned I's, Superior ratings, in all major events.

High School Principal Frank Cockrell said Saturday morning that the Sweepstakes award will not be made until the Tri-State Concert Saturday night.

Cockrell said with all the I's the organizations and individuals have earned, the school has a good chance to get the Sweepstakes Trophy.

This sweepstakes trophy goes to the school whose entire music department compiles the most points in all events.

In 1962 the Lynx Band retired one sweepstakes trophy after winning it three years in a row. The band earned the top award without the assistance of avocal music department.

In 1963 the band missed the top award, but last year it and the newly organized choir far outdistanced the competition.

The Choir has not had a rating below a I since it was organized last year. It has been the outstanding choir at PAMC both years and has earned I's at Enid both years.

Cockrell had only a partial list of the individual and ensemble winners. In vocal music the boys quartet of Ronald McDonald, Mike Morris, Don Archer and Jim Steve Ownbey, earned a I. The girls' ensemble of Donna Seymour, Debra Brock Lynn Garnett, Helen Collard, Carla Archer, Sue Bradford and accompanist Susan Uptergrove earned a I.

Late Saturday afternoon it was learned that band students earned seven I's in solo instrument competition and three II's.

Band ensembles earned one I and six II's.

Vocal soloist Debra Brock got a II rating and the Swing Stage Band received a II.

There have been over 200 Spearman musicians in Enid competing since Wednesday. The band was in the Marching contest Wednesday night.

Choir members not in the band went to Enid Thursday. Part of the choir returned Friday night.

All band students, except Tri-State members returned Saturday afternoon.

Tri-State choir and band members are returning today.

Texas motorists paid for many miles of new highways last year. But they never were built.

Governor Connally emphasized this point today in accepting the first of a quarter-million litter bags given to the Texas Highway Department by the Galveston Chamber of Commerce and the Galveston Convention and Tourist Bureau.

The bags will be distributed to motorists at each of the eight Tourist Information Centers located at points of entry on key highways of the State and in the Capitol rotunda.

"The Texas Highway Department is charged with the construction and maintenance of the State's superb 66,000-mile highway system," Governor Connally said. He added:

"But the truth is that more than \$1.5 million of taxes levied on highway users is wasted each year to pick up litter thrown along the right of way by careless motorists. This money could better be used to build more miles of new highways, and to protect the taxpayers' \$4 billion investment in our existing system."

The bags were donated by the Galveston Chamber of Commerce to encourage litter control among out-of-state visitors. They also bear a message of invitation to visit the Galveston Island resort area.

D. C. Greer, State Highway Engineer, pointed out that approximately 12 million visitors come to Texas each year.

"These visitors represent an industry of more than one-half billion dollars a year," Greer said. "We hope that Texans will become conscious of our litter

problem and help us present a 'clean house' for our paying guests."

The Texas Highway Department has distributed litter bags through the Tourist Information Centers for many years. However, this is the first instance that any organization has donated such a large number of bags for free distribution.

Some 400 thousand tourists visited the Information Centers last year. Besides litter bags, nearly two million pieces of travel-oriented literature were handed out. In addition, Information Center personnel encouraged tourists to extend their trips to visit other Texas scenic and historical attractions.

Conservation Group Visits Gifford-Hill Western

Mr. Jim Burk, District Sales Manager for Gifford-Hill-Western and Vice President of the Goldenspread Chapter of the Soil Conservation Society of America, made arrangements for some 35 to 40 Society members to tour the Gifford-Hill American Pipe Manufacturing Plant in Amarillo. The group saw the manufacturing of reinforced concrete pipe with sizes ranging up to 72 inches in diameter. This pipe is used in the aqueduct system between Lake Meridith and Amarillo.

Mr. Burk also arranged a tour through the Gifford-Hill Panhandle Plant, east of Amarillo, where the group observed the manufacturing of 15 inch rubber gasket concrete pipe, which is being used more extensively in irrigation systems by farmers in the Panhandle and South Plains.

Construction of the Sanford Dam was observed. Mr. P.R. Kensley, Resident Engineer; Dale Powell, Chief Surveyor; and Phil Larsen, Safety Engineer for Zachry Company, provided a guided tour of the phases of construction. Mr. Kensley stated this would be the next to the last group to tour the dam while under construction. The work has be-

come so concentrated that visitors slow down work and increase probabilities of accidents. The contractor is scheduled to complete the dam in June. Mr. Kensley explained the operations of the tower which can select the area to withdraw the best quality water. He explained the functions of the flood gates, the emergency spillway and the stilling basin. A discussion was given on the set up for pumping water to Amarillo and the other member cities to the south. A separate pumping system will be used to provide water to Borger and Pampa. Mr. Kensley reported on the development of several recreational areas around Lake Meridith. It was pointed out that these recreational facilities will be turned over to the National Parks Service for further development and operation.

Bob Crawford, society member from Spearman attended the tour.

When you are beating egg whites for Baked Alaska, make sure the whites double their volume; then beat in the sugar called for until it dissolves.

When you are coating a metal mold with caramelized sugar, it's a good idea to heat the mold before coating because the sugar hardens quickly.

You'll need a fine-meshed strainer if you are planning to sieve frozen thawed raspberries for use as a sauce. The fine mesh will restrain the seeds!

HOLLYWOOD TO BROADWAY

Seaton, veteran film director, makes his Broadway staging debut this spring as the man in charge of "About William," a drama by Henry Denker.

The assignment, according to Seaton, involves no moviemaking tie-in. Prior to going to Hollywood in 1942, Seaton did some writing for the stage.

From an old cook book: When you roast turkey rub the bird with butter and place it on a rack in a dripping pan with the breast turned down so that the butter and juices will run downward to moisten the delicate white meat. When the breast has browned nicely, turn the bird on its back. Baste often!

TORQUE

... puts the guts in the CASE Row Crop 930

This tractor is long on staying power. Torque. The plain, ordinary guts it takes to rip heavy sod with six bottoms . . . lug through the tougher spots non-stop.

What makes the big difference? Basic Case engine design. Big pistons. Large radius crankshaft. Long connecting rods. All operating together to produce maximum leverage at relatively low engine speeds. On your books, this means more workpower with less wear.

All drive-train gears, bearings and shafts are matched to the high torque of the engine. They're big enough and tough enough to soak up any shock loads or strains continuous heavy tillage can deal out. It's a working transmission—five of the eight forward speeds are in the heavy tillage range.

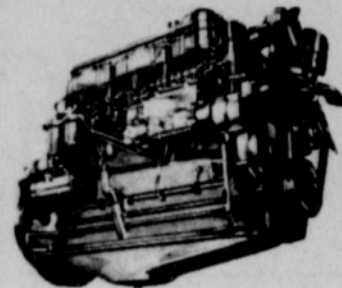

Power, strength, speed. And comfort—to make your day in the field a lot less tiring: Power steering; simple, fast hydraulics; Draft-o-matic® implement control; nine square feet of platform space; an "armchair" seat and "control-tower" visibility. A 48-gallon fuel tank to eliminate refueling stops.

But first the 930 stands for high torque power—big equipment guts that makes you money through more work capacity and less maintenance. See your Case dealer. J. I. Case Co., Racine, Wisconsin.

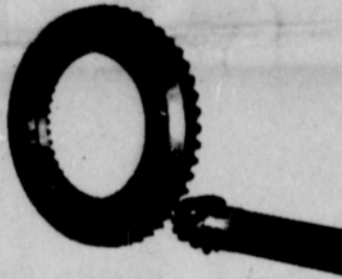

CASE

See Your Case Dealer for Quality Gold Seal Used Equipment

Massive engine—Brawny, 6 cylinder moderate speed engine has heavily ribbed block, multiple cylinder heads. Seven bearing crankshaft. 15-inch clutch. Diesel engine is 401 cubic inch; gasoline and LP-gas are 377 cubic inch.

Engine-matched power train—Big power needs big gears, shafts, bearings. The 930 transmission and final drive are designed right from the keyways to handle all of the guts in the engine. Dual-range, eight speeds.

High-torque lugging power—The 930 not only peaks higher than any tractor in its class, but also maintains higher torque over a broader range of rpms. Tremendous ability to lug and last!

Power-matched draft control—set the Draft-o-matic® lever and get power-boosting traction automatically—with minimum depth variation. Smooth! Senses, compensates for load changes up to 600 times a minute. Category II three-point hitch.
