# Why we support a Hospital District!

These are changing times and the people who live in smaller communities are faced with grave problems to retain protection for themselves and their families. Nowhere has the change been any greater than in the medical profession. For more than 70 years Motley County has had the services of from one to five doctors. They were general practitioners who usually called at homes. They were capable, dedicated men who served this area with skill and pride in their profession. Most of us over 40 years of age were born in the homes of our parents, with the services of a good doctor.

We accepted with a greater feeling of security, the hospitals that serve our area. We are grateful for them and the capable doctors who head them. We wish very much that we could retain the present situation. If we vote a Motley County Hospital District, it is because we are preparing for an eventuality when retirement or other causes may leave us without medical protection.

We much prefer that private investment own and maintain hospital facilities. We know, however, that doctors are reluctant to come to smaller communities unless they have some assurance that they will be successful, and that they would prefer not to have the responsibility of a hospital. We do not blame the doctors. They have spent long, expensive years learning a great profession. They have every right to secure the most possible returns from their productive years.

On the other hand, we want available hospital service for our families. If we are old, we know that we will need a doctor's service more frequently and if we are young and have children, we need a doctor's protection more desperately. We are not certain a hospital district will bring us security, but it is all we know to do as we meet the problem. Certainly it will aid our chances in the future.

Some contend that hospital districts are failures. This is true in some cases and it is also true that many private businesses fail. Many small hospital districts have been entirely successful.

The problem is a serious one and concerns everyone who has children or grandchildren. It concerns young and old who have homes in the area. It concerns the future security of those nearest to us and their progeny.

A hospital district will cost in taxes, but it can return more value than you have ever received for a tax dollar.

Here is an example: If for instance, you have a \$15,000 county valuation, you are now paying \$171.00 county taxes. At the estimated 30c per \$100 valuation, you would pay an additional \$45 in taxes.

If you have a \$2000.00 county valuation, your present taxes are \$22.80 and the estimated 30c cost of the hospital district would add \$6 to your present county taxes.

If you have a \$100,000 county valuation, you are presently paying \$1,140 in county taxes and the district would increase your cost \$300.

The estimated 30c tax would raise over \$24,000 per year.
