

**RAIL DUST**

By DOUGLAS MEADOR  
 In the unhurried approach of dawn it is possible to see the journey of time enter the precinct of a new day, serene, meditative, and with a sense of companionship.

Analysis of truth would be its fiber as being important to the combined strength of the structure.  
 The devil is experienced in the matter of lures, knowing full well that he can often land the lesser with the poorest of bait.  
 It was originally intended as a finger to freedom is not enforced, not as a rope around the neck to enforce thralldom.  
 Fishermen find it cheap by fish at the market, but the knowledge as a safety net to be used in the case of emergency, on the way to the bank.

**School Shows Low Bond Indebtedness**

Bonded indebtedness of the Matador Independent School District has reached possibly an all time low according to a report submitted to the Board of Trustees by Superintendent Bert Ezzell.  
 According to the report the bonded indebtedness now amounts to \$20,000.00 which is probably the lowest of any school district in the area.  
 The high point of the debt was probably reached in 1946 when it reached \$114,000.00. The entire indebtedness will be paid by 1967.

**Dickens County Bond Assumption Election Called**

The Spur and Patton Springs Independent School Districts have called a bond assumption election on Saturday, July 23, for the purpose of each of these districts assuming the inherited bonded indebtedness from their part of the old Dickens School District.  
 Patton Springs received 33 per cent of the territory of the old Dickens District; Spur received 56 per cent and McAdoo got 9 per cent. Each of these schools must assume its proportionate share of the \$51,000 outstanding bonded indebtedness on the Dickens District.  
 A joint statement prepared by Patton Springs Superintendent C. W. Giesecke and Spur Superintendent J. B. Settle follows:  
 "Each of our school districts is required by law to be responsible for the payment of its share of the bonded indebtedness of the Dickens District which was annexed to it. This bond assumption election merely spreads the assumed bonded indebtedness over the whole extended territory of each of the districts with NO ADDITIONAL TAXES to be assessed the taxpayers. This involves no change in tax rate or evaluations. It is just a legal procedure involved when a school district acquires more territory upon which there is outstanding bonded indebtedness."  
 Qualified Spur voters will vote in the Dickens County Electric building and Patton Springs voters will vote in the Ag building on the school campus.

**Graphic Slides Show Irrigation Hope of Farmers in India**

Irrigation is the hope of India farmers, most of whom never owned a pair of shoes, according to George Knerim, Agricultural Advisor, Water Use, with the U.S. International Cooperation Administration, who showed slides and discussed his work during the Sunday evening service period at the First Methodist Church.  
 Mr. Knerim, who once taught school in the Folley community in north Motley County, has been in the Far East for five years and currently is spending his leave back in the states during the monsoon season in India.  
 Mr. Knerim, with his wife and younger son, Larry, 9, visited here during the week end with his sister and family, Mr. and Mrs. Frank Pohl, after a visit in Bronte with his parents, Mr. and Mrs. C. L. Knerim, former Floyd County residents.  
 Following their visit here they will proceed to Boulder, Colo., for a visit with their oldest son, Willis, 20, who is taking summer courses at the University of Colorado, following his freshman work in Linfield College at McMinnville, Oregon. He is majoring in political sciences. While with his family in India, he attended Woodstock Mission School in Missori, the residence of the Dalai Lama during his exile from Tibet.  
 Graphic colored slides shown Sunday night by Mr. Knerim were of the area in which he is working, and of the type of farmer whose income is approximately 43¢ per day.  
 Next week the Tribune will publish a factual account of his work, including pictures of oxen in the fields where irrigation is being introduced from water supplied by one of India's seven new dams.

**Rainfall Is Over '59 Total**

SURPRISING data on the 1960 rainfall furnished by pharmacist Bob Stanley who keeps accurate records of the precipitation as registered in his rain gauge. As of Tuesday night the rainfall of 1959 was .07 above the total for 1960.  
 Total rainfall to this date in 1959 was 17.53 inches while to date this year the total is 17.46.  
 The difference is when it fell. The rain fell in May and June last year, 7.64 inches in June and 6.63 inches in May. By comparison this year 3.85 fell in June and only 2.70 in May.  
 To date this month, including 52-inch late Sunday, the rainfall total is 6.79 inches. Last year only 1.01 inches of moisture fell in the entire month of July and the largest rain during the month was .28-inch.  
 Rain has fallen for the past four Wednesdays, and yesterday was no exception. A series of showers put the 1960 total to this date over the total for the same date in 1959.

**Lions Making Plans for Cleanup of City**

MATADOR LIONS are planning effective strategy against the weeds to prevent complete occupation of alleys, vacant lots and border areas. Continued rainfall through the usual dry month of July has brought about a jungle-type of vegetation that is providing a haven for swarms of mosquitoes, flies, bugs and other insects.  
 The Lions at the regular luncheon meeting held Tuesday in the Methodist Church basement, announced that Tuesday, July 26, has been designated as general cleanup day. Action downtown will begin at about 6:30 o'clock when the fire alarm will sound to warn out workers. Hoes, rakes, power mowers, yos, and everything else to cut grass and weeds will be needed.  
 As a traditional practice, places of business operated by Lions are asked to remain closed until the downtown area cleanup is completed.  
 To add further emphasis to the project, the drive is under the supervision of Lion Bill Seale, who not only is Tail Twister, but is also Mayor. He is chairman of the cleanup committee composed of himself and the following members: J. R. Whitworth, Clyde Gilbert, Ward Rattan and Pat Sheridan.  
 Cooperation of the residents of Matador is also sought to make the cleanup citywide. Rubbish, weeds and trash should be placed in containers to be hauled away by the city's cleanup truck. It is pointed out that continued rains create health menace that affects the entire citizenship.

### Bogota's Clouds Follow Resident Home and Dump Torrents of Rain on Texas

By Pina Sturdivant  
Uncle Tom Levelland picked me up and brought me in. As we came through Matador at about 10:30 p.m. I had the feeling I'd only been gone a day—nothing at all was changed—even the chugholes in the road were the same.  
**Would Welcome Sandstorm**  
Now, I had said the first thing I wanted to see was the West Texas sun and a good sandstorm. It was raining a year ago when I arrived in Bogota; it rained every day in between. Well, Bogota's clouds are quite vain and vindictive, and their feelings were hurt at that statement, so they tagged along after me, and rained all over West Texas just for spite.  
That's where all the unseasonal floods of the past week came from, I'm afraid.

### NOTED TEXAS AUTHOR DIES

In 1945 he returned to the Globe-News and for five years conducted a column entitled

### LAWS PROHIBIT CATTLE ON ROADS

The Texas Department of Public Safety reminds Texas cattle owners that a new law went into effect July 1 aimed at controlling livestock on designated U.S. and state highways.  
The new law makes it illegal for a person knowingly to permit his domestic livestock to roam at large and unattended on state and federal highways. It applies regardless of whether or not the highway right-of-way is fenced. Maximum fine for such violation is \$200, and each day the violation occurs may be considered a separate offense.  
Farm to market roads are excepted from the law. The new law also gives law enforcement officers the authority to have such livestock picked up, when unable to locate the owner, and turned over to the sheriff or constable in the county.  
The law does not prohibit the driving or herding of livestock across or along highways. It gives peace officers the authority to enforce provisions of the act without a warrant.  
Col. Homer Garrison, Jr., director of the Texas Department of Public Safety, said state patrolmen will enforce provisions of the law in an effort to reduce the traffic hazard caused by animals on designated state and U.S. highways. He said that during the year 1959 a total of 1406 rural traffic accidents occurred in Texas involving animals of all types. In these accidents 216 persons were injured and 4 persons were killed.

### Little-Known Plant Good For Home Use

When Mrs. Lois Burns of Harlingen visited here recently with her sister, Mrs. Clyde Gilbert, she brought along a plant that is native to the Valley, but is very little known.  
It probably should be grown in every yard throughout this area because of its highly desirable medicinal qualities; and in future years because of its economic potential.  
The plant is known as Aloe Vera, and is now being grown in large quantities in the Valley area and may become one of our commercial producing crops, according to agricultural authorities.  
Frank Brunnehan of San Benito, according to a newspaper clipping from the Harlingen Press, "can cite many home uses for this plant. Among them, he says is its pain-killing and healing power when used for such things as insect stings, burns and sunburn and small cuts."  
It is also, Brunnehan says, highly regarded by our Armed Forces medical sections for use in connection with atomic radiation or burns, should that happen here.  
**Like Century Plant**  
"The Aloe Vera looks very much the Century Plants, although somewhat smaller. When the long spires, or leaves are snapped off and peeled, a jelly-like substance is found. It is this jelly that has proved so effective."  
Brunnehan says the effect of the jelly on the human body, as best he has been able to determine in his own research, is to heal and revitalize body-cells. He found that by taking this Aloe Vera jelly, adding a small amount of water and bringing it to a near-boil, it could be cooled and refrigerated without losing its qualities. It is effective in this form or fresh, he says.  
According to Brunnehan, who recently retired as former Cameron County Agricultural Agent, the plant is easily grown. New plants can be started from pieces of roots or from small new leaves on the old plant.

### Friends Attend Clements Rites

Several from Flomot attended funeral services for A. L. Clements, former resident of the community, who died Wednesday morning, July 13 after an illness of about nine months. Services were held at 2 p.m. at the First Baptist Church.

Mr. and Mrs. Clements moved to Flomot in 1912, from New Mexico, and in addition to his farming, Mr. Clements was the town barber for 30 years. He and his wife were charter members of the Flomot Baptist Church, organized in 1914, and gave the land on which the church now stands. Mr. Clements was chairman of the building committee when the church was built in 1916. He held the office of Sunday School superintendent and church clerk and treasurer during his 31 years here.

Their two children, Glen A. (Scotty) and Lou Ruth Thomas attended school here and were present at the School Homecoming July 3. The family moved to Childress in 1943 and Mr. Clements continued his profession as barber. The Clements home is 1503 Ave. H. NW.

in severe attacks, the stems are so penetrated that they cause the plants to fall over and die. Cold wet soils cause the disease to be more prevalent, and hot dry weather is the best treatment for recovery. Seed treatments normally used do not prevent the disease.

### CURLY TOP DISEASE DAMAGING TOMATOES

Curly top disease of tomatoes is primarily a problem in irrigated areas of West and South Texas. In northwest Texas up to 33 percent damage is not uncommon in some fields. The virus disease starts appearing in South Texas during April and May. It may be expected in northern areas of the state during June, July, and August.

Affected leaves first turn grayish green. Soon leaves become crisp, brittle and roll upward. Leaves turn light green to yellow with purple veins on the lower sides. Plants stop growing, fail to ripen fruit and die within a few weeks.

The virus disease is carried by the very small beetle leafhopper. The disease is controlled in commercial fields by preventing its spread by regular spraying or dusting with insecticides.

### BAGWORM CONTROL TIME IS STRESSED

Bagworms are active in all parts of the state. The time to obtain good control of these pests is when they are young, as chemicals applied after the worms are grown gives no control, according to James Hawkins, assistant extension entomologist.

After hatching, the larvae immediately start to feed on the foliage of ornamental plants. The young worms spin a silken bag about themselves and as they feed attach bits of foliage to this bag. The worms carry this bag with them as they move about. When the worms are grown, this bag is one and a half to two inches long and affords the worm almost complete protection.

In September the female worm deposits her eggs in the bag and then dies. The bags should be picked from infested plants and burned because the eggs for next season's worms go through the winter inside the bags.

Hawkins recommends 10 percent toxaphene or 4 percent malathion dust as a control.

MUSHROOM ROOT ROT is one of the most common root rot

diseases of shade trees and shrubs. Peach and plum orchards are frequently destroyed by the disease which occurs in all areas of Texas. Infected trees or shrubs usually die from April through July.

SEED FROM TASCOSA, a new hard red winter wheat variety which produces excellent yields of outstanding quality, will be available from producers of certified seed after the 1950 harvest.

Tascosa differs considerably from the present commercial varieties grown in Texas. The plants are shorter in stature and the straw is strong, which aid in resisting lodging.

FAMILY PUTS 2,000 MILES A MONTH ON CORVAIR THINKS IT'S MARVELOUS GAS MILEAGE 'OUT OF THIS WORLD' Mr. and Mrs. Richard Kabela of Plant City, Florida, couldn't be happier with the way their new Corvaire worked out as a combination family and business car. On their newspaper distribution route alone they travel more than 400 miles a week over all kinds of roads. Little wonder they're so pleased with the gas mileage they've been getting - "at least twenty-three miles to the gallon with an automatic transmission . . . and we've had no trouble with our Corvaire." The Kabelas have equally good things to say about Corvaire's easy-going comfort and unique convenience features. They especially like the way the fold-down seat doubles as a built-in baby sitter. DRIVE A CHEVY CORVAIR FOR ECONOMICAL TRANSPORTATION If you haven't driven it yet, you don't know what a delight driving can be. Its steering, response, traction and roadability are unique because it's a unique car - the only U.S. car with an air-cooled airplane-type rear engine, transaxle and independent suspension at all four wheels.
