A thought, timely for Texas

The Kennedy administration's vay of getting the nation moving by espousing long walks that are killing off a lot of tenler feet in the process should bring out an important point. The time to start getting in trim physically is when you are very young - so why not start a 'walk-to-school" program - or, rather, revive the custom, for walking to school was customary until free school buses became the pattern. As one educator pointed out recently, "The children are picked up and delivered at the school, where costly gymnasiums provide exercise facilities.'

mn, "Reactions"

Not many parents who drive their children to school, but remember the many miles they themselves walked, and not always on sidewalks, to reach the halls of learning. Often the trek was down a long, hot dusty road, or in cold, wintry blasts, according to the season.

The Center of the Southwest is our service area.

It is called the Center of the Southwest because it is in the very heart of one of the Nation's fastest growing regions.

For many months we have been engaged in an extensive expansion program throughout our service area, enlarging both generating capacity and distribution facilities.

It is a far-sighted, long-range program based on one simple fact. We are convinced that the Center of the Southwest faces GROWTH UNLIMITED.

Current conditions confirm the belief. Population is increasing, more businesses are moving in, new industry is coming our way, natural resources are being developed, bank deposits, spendable income and business construction all are on the way up.

That is why we are investing millions to meet the present growth of the Center of the Southwest, and to be prepared for its continued development in the months and years
