Last American killed before cease-fire encouraged reconstruction; first GI to die after cease-fire enlisted because he wanted to fly

SAIGON (AP) — The last American killed before the Vietnam cease-fire was the father of five children, an Army officer who had lived through the siege of An Loc and was passionately dedicated to rebuilding the devastated city.

Ironically, Lt. Col. William Nolde of Mount Pleasant, Mich., was killed in An Loc by a direct artillery round hit just as he finished conferring with his Vietnamese counterpart on how to get the economy rolling again.

The official end of the war was only

"Bill was a very compassionate person," said Robert Walkinshaw, the pacification chief for the 3rd Military Region and a close personal friend. "He drove all over Binh Long Province in his jeep encouraging the people to go back and put the pieces of their city together again."

Nolde, 43, was assigned to An Loc, the capital of Binh Long Provinne, in early May as senior adviser, just as the city was midway in its four and a half month siege by Communist command troops and heavy guns.

Once a lovely city surrounded by rubber plantations, An Loc after its relief was little more than a moonscape of rubble and dust.

"But Bill loved that place," Walkinshaw continued. "He was always getting together with the Catholic priest on who to rebuild the church and hardly a week went by that he didn't run over to refugee camps at Phu Van in the neighboring province to see how the people were making out whom the war had driven from their homes."

Nolde's obsession with the dream that

fire in Vietnam.

An Loc would rise again had given him a street corner fluency in Vietnamese.

"More than enough to carry on a conversation on getting things going again," said another American friend.

At the height of siege, when 7,000 rockets, mortars and artillery shells a day were falling on An Loc, Nolde made his headquarters in neighboring Binh Duong Province.

The enemy wanted the town 60 miles north of Saigon as the showpiece of their spring invasion and perhaps as a provisional capital for the Viet Cong government.

More than 10,000 North Vietnamese troops were killed trying to take the city. Friends say it was then that Nolde made up his mind to help rebuild what

the helicopter pilots who circled the town described as a red dust bowl made up of clay and blood.

George Jacobson, the chief of staff for pacification in Vietnam and Nolde's top boss, said, "while I realize someone has got to be the last one killed in the official part of the war, I regret exceedingly it had to be Bill. He was a first class officer and a first class person. The Vietnamese people loved him."

"He was a fine gentlemen," said a South Vietnamese officer who knew him

Nolde was killed about 10 p.m. on the last day of the war. While the rest of the country was witnessing a marked upsurge in fighting, the town on Highway 13 was relatively quiet.

"That night, the town wasn't taking that much fire," said Walkinshaw. "Bill was just leaving the ranger compound, after saying good night to the province chief, when the round came in."

Tech photographer's solarized nude

Or official turn of the head, perhaps?

Nude modeling gets administrators' nod

Special Reporter

Nude modeling plays an important role in Tech's art department while administrators view the situation with either a nod of approval or an official turn of the head.

Several art courses, such as life drawing and creative photography, utilize nude models as the basis of their

Hugh Gibbons, assistant art professor and instructor of life drawing, said there is rarely any problem of embarrassing a student or offending anyone's morals

"Years ago, there was a problem. One student suggested that we segregate the male and female students by putting each group on a different side of a board. Then the students would draw the figure by looking through holes in the board. And he was really serious," Gibbons

Sue Daniels, a social welfare major and a former model for the art department, said no one ever said anything lewd or nasty to her. "In fact," she said, "no one even asked me for a date."

Daniels, who modeled at Tech for two and a half years, quoted Dr. Bill Lockhart, chairman of the art department, as saying she wouldn't last when he hired her. She said Lockhart thought she looked too innocent.

She said she applied for the job because she needed the money. Tech students are paid \$2 an hour and non-students are paid \$2.50 an hour.

The reason for this discrepancy, Daniels said, is that several years ago students could not model in the nude. Therefore, student models were paid less than those more valuable non-student models who could pose nude.

Daniels said she felt the pay scale should be changed now that students are allowed to model nude also.

Gibbons said there was no set criteria by which the department hires models. He said, "We use what we can get.

However, we do try to vary the sexes. We don't use the sexes simultaneously

Creative photography instructor James Hanna refused to comment on the use of nude models in his course, except to say there is "no official policy" on using nudes and that "it is quite essential to art that we use nude models."

Gibbons said the department never has had any trouble with the administration concerning the use of nudes.

Vice President for Academic Affairs S. M. Kennedy said the university does not have a formal written policy on the

He said, however, "I'm aware that the art department has been using nude models for several years."

The professor has the responsibility for insuring good taste and the efficient use of the model as an instructional device, Kennedy said.

Kennedy also said the class could not be held out in the open. "There are state regulations concerning various states of undress. However, I'm not familiar enough with them to discuss them."

Gibbons added that the courses using nude models must be in closed rooms to avoid distracting other students.

Modeling is very strenuous work, Daniels said. "Once my leg went to sleep and fell off the stand," she said.

Although she was scared at first, Daniels said she finally realized that she was enabling the students to learn to draw the human body.

A male model, presently employed by the art department, said, "I enjoy seeing the students finally relax. At first, they play like there's nothing standing in front of them. But finally, they realize there is a body there."

Daniels said she was not at all embarrassed or ashamed of being a nude

"When I'm applying for another job, though, I don't usually tell them what I did at the university. You know, some people could handle it and some couldn'-

SANTA BARBARA, Calif. (AP) — The first American killed in Vietnam after the cease-fire took effect called his family last week to tell them he was involved in dangerous work that probably would keep him there after most other U.S. troops were withdrawn.

Army helicopter pilot Anthony Dal Pozzo Jr., wounded one hour and 45 minutes after cease-fire was supposed to begin, died Monday.

He had been injured by small-arms ground fire while flying a courier mission 10 miles southwest of Can Tho, capital of the Mekong Delta, the U.S. Command

Dal Pozzo, 21, a native of this coastal city 100 miles north of Los Angeles, graduated from helicopter school last November and had been in Vietnam less than seven weeks.

His mother, Betty, said the family received a call from him last Tuesday, the day President Nixon announced the cease-fire agreement.

"He said it was pretty bad where he was," Mrs. Dal Pozzo said. "He knew that he might not be able to come home with the other troops because of the work he was doing.

'Ft. Worth Five' turn selves in

FORT WORTH, Tex. (AP) - The Irish sympathizers known as the "Fort Worth Five" surrendered to the U.S. marshal Monday and returned to Tarrant County

The five New Yorkers spent more than 12 weeks in jail here previously for refusing to tell a federal grand jury what they know about an alleged plot to run guns to Northern Ireland.

The U.S. Supreme Court last week refused to hear their appeal in the case. The five flew into Dallas about noon Monday and appeared at the U.S. marshal's office with an attorney at 2

"They do not plan to testify. Because of that, I can't really say how long they may be incarcerated this time," said Frank Durkan, one of the New Yorkers' defense

The five are Kenneth Tierney, 45; Paschal Morahan, 25; Mathias Reilly, 31; Daniel Crawford, 45; and Thomas Laffey, 32.

They refused to testify even after being granted immunity from U.S. prosecution because they said they fear prosecution by Great Britain.

In June, U.S. District Court Judge Leo Brewster held the men in contempt of court and ordered them to jail without

Some 'known' **POWs absent** from lists

WASHINGTON (AP) - Fifty-six Americans known to have been prisoners of war in Southeast Asia remain unaccounted for by North Vietnam, the Pentagon said Monday.

Defense Department spokesman Jerry W. Friedheim said an initial name-byname analysis indicates there were "56 men that we had previously carried on our list of prisoners of war that are not on either list" received from the North Vietnamese.

Officials said these men were known to have been alive in Communist prison camps at some point during the war.

Two lists turned over to U.S. officials in Paris Saturday by the Communists identify 555 U.S. fighting men captured in North and South Vietnam and 55 others who died.

There also are no clues to the whereabouts of 1,269 men listed as missing in Southwest Asia, including more than 300 lost in Laos during air strikes against enemy supply routes.

"We don't have any further information about them at this point,"

"He couldn't tell us what it was, but it had been indicated to him that they'd probably be staying.

"I just wish he hadn't tried to be such a hero," she added without elaboration.

She said her son, a warrant officer, graduated first in his class out of helicopter school and had received a Bronze Star and an Air Medal while in

He had been shot down once before. Anthony enlisted in the Army.

"He always wanted to fly," his mother said. "He got his pilot's license at 17 and figured this was a good way to get his flying in."

He had accepted combat as the price he had to pay for the schooling he received, she added.

The Dal Pozzo family — there is a brother and three sisters - received a telegram Sunday night telling them Anthony had been seriously wounded.

An Army representative came to the door Monday morning to tell them of his

POW's kin: 'Can't help but hope'

(AP) - Muriel Egan of Mountainside, N.J., had been waiting since Jan. 21, 1966 to learn the fate of her son James Jr., a Marine captain who was ambushed at Quang Tri in Vietnam.

Saturday night she was informed by a Pentagon representative that her son's name wasn't on the prisoner of war list released by Hanoi.

"After seven years of waiting, this is the worst day of our lives," Ms. Egan said Sunday.

"It has been almost three years and there was really no reason to hope," said Elaine Murphy, 27, of Gainesville, Ga., whose husband Larron, an Army captain and helicopter pilot, was shot down on April 23, 1970.

But Larron's mother, Ms. Lawrence Murphy of Dalton, Ga., said she wasn't giving up.

"I'm still expecting my son's name to come up," she said. "I'm not going to give up hope. I'm going to keep faith in our government that they're going to keep checking on all these who are missing until all have been accounted for."

"As long as you don't know, you can't help but hope," said Joyce Treece of Fitzgerald, Ga., whose husband James, an Air Force major, was shot down over South Vietnam on Oct. 7, 1966.

The Treeces have four children. aged 9 to 14.

"I think they were prepared for this," Ms. Treece said. "I just told them the truth."

Kurt C. McDonald, an Air Force major whose plane was shot down on Dec. 31, 1964, has been missing longer than any other Air Force officer.

His mother, Ms. Craig Mc-Donald of San Mateo, Calif., said a representative from Hamilton Air Force Base called to tell her that Kurt's name was not on the POW list.

"You just keep hoping, that's all," she said.

Nina and Herbert Crosby of Donaldsville, Ga., had been married only three days when he returned to combat. An Army captain, Crosby has been missing since Jan. 10, 1970 and is still unaccounted for.

Ms. Crosby said the news that her husband's name was not on the POW list came as no surprise.

"He was a helicopter pilot," she recalled. "There were three others in the helicopter and.. hey never found any of them."

Walter Fitts, of Abingto Mass., whose son Richard, ar. Army staff sergeant, has been missing since 1968, said, "we're very disappointed...We'll just keep waiting and praying. There's always hope."

and Rep. Kay Bailey of Houston, labored so long." Mayor's aide criticizes senate's lack of action

Legislators honor Nixon

By JEFF LUCKY Special Reporter

Lack of action on the part of the Tech Student Senate is depriving students of a representative voice at Lubbock City Council meetings, according to Larry Adams, an administrative assistant to the council and a recent Tech graduate.

"Mayor (Morris) Turner told the Tech Senate that he hoped to include a student representative at council meetings," said Adams. "They heard that proposal last spring and to my knowledge have not acted on it yet."

"The student representative idea was originally delayed because of some confusion as to whether the senate itself or the executive branch of student government should make the appointment," said Arts and Sciences Senator Debi Martin, also chairman of the Government Operations Committee.

"After waiting, I sponsored the appropriate legislation at the last November meeting of the senate," she

"Since then Robert Grinsfelder, another senator on the committee, and I have tried to contact the mayor by phone two or three times but he has been unavailable.

"I planned to go to last week's scheduled council meeting but because it was on Thursday (the official day of mourning for ex-President Johnson) I thought it had been cancelled."

Martin explained that no permanent representative has been appointed but that the Government Operations Committee has been empowered to designate a representative from week to week. Adams directed Turner's campaign on

campus and is a former president of the Inter-fraternity Council and was once active in student politics. He also discussed a number of council proposals, past and present, that he feels

"The city has been trying for some time to secure 14 feet of right of way west of University Avenue from 4th street to

deserve student interest and con-

19th to widen University.

"Anybody who has traveled that street knows the need for widening it but the city has not been able to get the necessary footage from Tech.

"I realize that these decisions are not up to the student body or the senate but a little action on their part, in concert with the city, might loosen up the board of regents." At a meeting last April the board

way for later consideration, according to Freda Pierce, board secretary. Adams commented that Tech students would probably reap the greatest benefit

deferred the city's request for right of

from such an improvement. "Who knows, with the street widened it might even be possible to make a left turn from the southbound lanes," he

Possible restrictions of parking on the Tech Freeway near the Coliseum and Jones Stadium and plans to extend Indiana Street from 19th to the Tech Freeway across University land were other upcoming city council problems that Adams cited as requiring the attention of a student representative.

"Councilwoman Barbara Jordan is now attempting to place the Tech Freeway parking situation on the city council agenda," Adams said. "Very obviously this involves Tech commuter parking and more importantly the dangers of allowing students, or anyone

else, to park on such a busy street." According to the 22-year-old former business major, last year's senate failed to deliver to the council a resolution it passed which condemned the council's handling of last year's sanitation

workers strike. "If they can't get a resolution to us through the mail then I'm not going to worry about them," Adams added.

"Personally, I also hold the University Daily to blame for failing to give Tech students adequate opportunity to be informed about activities of the city council and in Lubbock itself."

European troop cuts BRUSSELS, Belgium (AP) -

U.S., allies to consider

Representatives of the United States, the Soviet Union and 17 of their allies have agreed to meet Wednesday in Vienna to try to work out a basis for cutting the armed forces of the East and West facing each other in the heart of Europe.

The meeting may help focus the attention of President Nixon's administration on Europe, now that a cease-fire agreement has been signed in With the United States, which has over

300,000 men in Europe, will come

Canada, Britain, West Germany,

Belgium, the Netherlands, Luxembourg, Italy, Turkey and Greece. The Soviets are bringing East Germany, Poland, Hungary, Czechoslovakia, Bulgaria and Romania, which often takes an independent line from Moscow. France will not be there.

But President Georges Pompidou, after some urging by Soviet leaders, has said he may change his mind. The fact that Western countries will

not affect events. At meetings like this, each participant has a virtual veto.

outnumber the Communists, 12 to 7, will

A conference might be organized in the fall at which the lines of the negotiation would be laid out, but it would probably take years to reach concrete

Friedheim told newsmen.

-'Going over the president's head'-

or How the regents should move the 'do nothing' administration

An open letter to the board of regents:

Grover Murray does not intend to honestly investigate a change in the controversial Memorial Circle policy. Not now. Maybe never.

Murray, his pride stung by student rallies and the cancelled Carol of Lights, is showing the students how this university is managed — by the whims of a president.

During the past two months Murray and his legal side-kick, Carlton Dodson, have disregarded your Dec. 3 decision to "look for a way out" of the circle controversy.

Evidently, Murray interprets "a way out" to mean "stalling" a decision.

Last week Murray told the UD: "I do not know when I will take a recommendation to the board. People got too emotional, too unobjective."

Earlier Dodson said he was "too busy with other things" to comply with the Dec. 3 decision by seeking a legal alternative.

Students deserve better treatment than this "no comment, no hurry" approach to investigating a valid complaint.

Students have worked too hard to accept less than an open investigation by an objective at-

Student leaders asked YOU for a change in the policy. They even offered an alternative. You expressed sympathy and instructed the administration to find "that way out." Murray smiled. And did nothing.

Two hundred students "spontaneously" caroled at Memorial Circle Dec. 5 in 17 degree weather. Murray viewed HIS campus lights from the comfort of his car.

Three hundred and fifty students rallied two nights later at one of YOUR alternate sites. believing the administration would act on your Dec. 3 decision. Murray did nothing.

Student leaders have petitioned the administration for progress reports. There was no progress to report.

Students are tired of reading about Memorial Circle. They are frustrated with the bureaucracy's insensible actions (or lack of

action).

We at the UD are tired too.

But the UD is NOT petitioning your help because we are unsatisfied with an administrative decision. We are seeking ANY honest decision.

I am personally petitioning Chairman Bill Collins for the right to address the regents in executive session. There are administrative statements and actions — the details of which I cannot print — but of which you should be aware before making a rational decision. Hopefully, to move the administration from its self-righteous position of "do nothing."

The East Wing will view my petition, and my other conversations with board members, as "going over the president's head."

Or perhaps my actions will be considered a "challenge to Dodson's integrity."

Accept my petition, instead, as a frustrated student's attempt to open an unbiased investigation into a campus problem.

Again.

Editorial

An honest peace?

President Nixon has declared a cease fire in Vietnam and claims America has succeeded in obtaining an "honorable peace" to the longest war in the nation's history.

But how can you have peace while U.S. bombs still fall? How can you have peace when children are still casualties of this so called honorable peace?

How can you have peace with the largest U.S. build up of supplies in South Vietnam this country has ever seen?

Americans have long dreamed of a true peace, not a ficticious peace consisting of U.S. military involvement and continued killing. It is time to show the political machine that Americans can no longer be duped by facetious words and political maneuvers. If you are really concerned in ending the war, utilize your individual power by cutting out and mailing a copy of the following poem to: President Nixon

Care of White House Washington, D.C. 20500

Dick Nixon I Am Lt. John Stulett, U.S. Army, 1st Cav. Div.

Written Feb. 15, 1971

We'll end the war with honor, you say, Dick? Dying while we stand in line to leave is just like dying for no reason at all.

How much longer? Every life's worth more than the death of the second it takes to die! What does it mean?

We have nothing new to tell you, Dick? What new way is there to save lives but

to stop the killing? A soldier dies in the puddle as I write this line, a hiding child convulses as you read it. The Killing is our wound-up clock!!

tick tick, tick tick; Trickling away blood, beautiful arms, my drunk buddies and beautiful slant eyes. What does it mean? Stop and give you time, Dick? If bullets catch up with that time we give,

we've murdered lives that die in the time.

We can't let go of the bullets until they fall short! Go after death-seekers and men who blow out eyes by being slow!

melt on elephant grass And a wrinkled man scratches his back up and down on a shrivelled hut -

On this wet hot rainy afternoon, slant eyes

He doesn't have any arms left. What does it mean? I'm afraid to know.

John Stulett died April 12, 1971 Poem from "Student Lawyer," Sept. 1972

Raiders carry perfect 4-0 SWC record into 7:30 p.m. meeting

By MILLER BONNER Sports Editor

The "friendly" cadets of Texas A&M open their arms to Tech's basketball team tonight as the league leading Red Raiders carry their perfect Southwest Conference record into G. Rollie White Coliseum for an

important SWC encounter. Coach Gerald Myers has managed to beat the Aggies only once, however, in the last four tries. The last time Tech beat A&M in basketball was the 1971 season, Myers' maiden year at the helm of the Raiders.

A&M stands 2-2 in league wars following wins over Texas and Baylor and losing to Rice and Arkansas. A&M is 10-6 for the year compared to the Raiders' 11-5 season slate.

The Tech-A&M series dates back to 1941, and the Aggies have carved a 19-15 advantage. At home the Ags have been nearly unbeatable, losing only five of 19 attempts to

The A&M game is the first of two key consecutive road games Myers' gang will play before returning to Lubbock. Following the Aggie game tonight, The Techsans head for Waco with a Saturday date with Baylor.

MYERS WILL SEND 6-3 guards Richard Little and Don Moore against the Aggie backcourt duo of 6-3 Mario Brown and 5-11 Mike Floyd while the matchup at center involves Raider frosh Rick Bullock against Ag sophomore Cedric Joseph. Bullock, at 6-9, 235, will have a one-inch height advantage over Joseph plus a 25-pound weight bulge. At forwards, Tech will have 6-10 Ron Richardson and 6-4 Ed Wakefield, the man that propelled

the Raiders past Texas Saturday night with a 10-point overtime performance. The Aggies will send their two top scorers, 6-7 Jeff Overhouse and 6-6 Randy Knowles up against the league leading Raiders.

RICHARDSON IS THE leading Tech scorer going into tonight's contest. The senior forward is sporting an 18.7 scoring average in SWC play plus the team's leading rebounding mark—a 12.7 mean. Following Richardson in the scoring column is Little with a 13.5 norm and Bullock's 12.0. Wakefield is second only to Richardson in rebounding with a 9.2 average while scoring at an 8.5 clip per SWC game.

A&M officials are expecting their third consecutive capacity crowd for tonight's encounter. Baylor and Texas, the last two Ag home opponents, drew 8,120 and 7,674, respectively. G. Rollie White Coliseum's capacity is listed as 7,500

Tonight's game will begin at 7:30 p.m. and can be heard over KFYO radio, 790, with Jack Dale and Bob Nash handling the commentary duties.

OTHER KEY SWC tilts tonight include the battle for the SWC's number two spot in Dallas between Arkansas (3-1) and SMU (3-1). Should the Raiders falter in Aggieland, the winner of the Arkansas-SMU game would move into a tie for the league lead. Baylor (2-2) travels to TCU (0-4) while Rice (2-2) heads to Austin for a meeting with the winless Texas Longhorns (0-4).

Should Tech treat the Aggie cadets rudely tonight, the Raiders would rise to a 5-0 SWC record and stand head and shoulders above the rest of the league - for awhile at least.

Dallas gets number 20

Survey reveals marijuana use high on Tech campus

By CASS RAY

Almost 48 per cent of Tech students have at least tried marijuana, according to a random sample telephone survey conducted last week by the UD.

A similar Gallup poll, also conducted last week, revealed that some 52 per cent of all United States college students have at least tried marijuana.

The Tech survey also revealed that 12 per cent of Tech students have tried at least one of the socalled "heavier" drugs-LSD, mescaline, "speed," opium, heroin and methadone.

Approximately 18 per cent of college students across the nation have tried LSD, "or other hallucinogen", according to the Gallup poll.

The telephone numbers used in the Tech survey were chosen at random from the Tech telephone directory. One hundred and ninety-five students were surveyed. This represents a representative sample of the Tech campus with a possible margin of only five per cent.

THE UD SURVEYORS explained to survey respondents that the surveyors did not have the names of the respondents and that the respondents' answers were not being separately recorded but were actually being charted anonymously in appropriate columns with other corresponding responses. Survey respondents were thus able to remain anonymous and to supply honest responses without fear of legal consequences.

The Tech survey also revealed that 23 per cent of Tech students are currently using marijuana. Frequency of use ranges from once a year to "at least every night" to "only at parties or on weekends," although most Tech users smoke marijuana two or three times a week.

Almost 25 per cent of Tech students have tried marijuana but are no longer using it. Most said they stopped because marijuana seemed to have no effect on them, because they were afraid of being "busted" or because they were pressured by friends and associates to stop. One ex-user said he stopped

because he was "tired of smoking all the time."

The majority of ex-users stopped smoking marijuana after only one use although others smoked as long as two years before stopping.

TECH EX-USERS smoked marijuana for basically the same reasons as Tech users smoke marijuana-relaxation, "enjoyment," escape, mind expansion and "insight." One user said he smokes marijuana "for the same reasons cowboys drink beer." An ex-user said he considered smoking marijuana "a form of entertainment." Several respondents said they smoked "because of status."

The majority of the 52 per cent of Tech students who said they had not tried marijuana claimed fear of the law and of the medical uncertainties of marijuana use as the reasons they have not tried the drug. Several said they had no need for the drug. Others said they probably would have tried marijuana if they had been given the chance.

Of the Tech students surveyed who had not tried marijuana, none had tried any of the "heavier"

Thirty-four per cent of the current users surveved and twenty-one per cent of the ex-users surveyed said they had tried at least one of the "heavier" drugs.

The majority of marijuana users, ex-users and non-users surveyed said it was not difficult to obtain marijuana in Lubbock. Several said buying marijuana in Lubbock "is as easy as buying booze" and several others said the drug is easier to obtain in certain "seasons" than in others. One respondent said marijuana "is only a phone call away."

The Texas Uniform Narcotic Drug Act defines the penalty for conviction for first possession of marijuana as no more than \$3000 and-or a jail sentence of not less than 30 days and not more than two years. The majority of marijuana users, exusers and non-users said they considered this penalty too harsh.

Although several ex-users and non-users said

they considered the penalty "just right" or too lenient, 100 per cent of the current users considered it too harsh.

The majority of marijuana users suggested that marijuana use be legalized or that first possession be considered a misdemeanor, rather than as a

THE MAJORITY OF NON-USERS said first possession conviction cases should be made misdemeanors. One non-user said the penalty "should be harsh enough to make the user stop and think about what he's doing." Another non-user said the penalty should be doubled.

The majority of ex-users suggested legalization of marijuana use. Several ex-users said they thought the police should "crack down on the pushers."

"If you ever got caught with marijuana you could kill the policeman and get off with a lighter sentence than if you were convicted on a possession charge. The laws need to be changed," said one

THE MAJORITY of marijuana users, ex-users and non-users said they had felt no pressure from friends and associates to begin smoking marijuana.

The majority of non-users said less than 10 per cent of their friends and associates had tried

The majority of ex-users said at least 50 per cent of their friends and associates had tried marijuana while the majority of current users said at least 75 per cent of their friends and associates had tried marijuana.

The majority of non-users said only one to five per cent of their friends and associates had tried at least one of the "heavier" drugs.

The majority of the ex-users said less than 25 per cent of their friends and associates had tried at least one of the "heavier" drugs.

The majority of users said more than 25 per cent of their friends and associates had tried at least one of the "heavier" drugs.

The Critique

"No great advance has ever been made in science, politics, or religion, without controversy."

-Lyman Beecher

THE CRITIQUE is the first of its kind ever published by a University Daily staff. This special magazine-style supplement contains many issues, questions and personalities not normally covered in The University Daily.

The controversial questions of abortion, veneral disease, birth control, pollution and drugs are becoming strong issues in today's nation and are basic issues of which The University Daily staff feel the Tech community should be aware. Other articles in this section covering Tech administrators and the bicycle problems, while not controversial, are other areas in which Tech people should be informed.

It is not the editorial opinion of The University Daily staff that our readers should either agree or disagree with the contents within the articles in this special section. Our position is merely that of informing the public of questions fast coming to the surface in today's public light.

A bust and a hit

Lubbock narcotics officers study the contents of a bust victim's pockets as a long-hair on the right goes unnoticed by officers as he takes a "hit" from his small hand-rolled cigarette.

'Getting busted is stupid'

(EDITOR'S NOTE: The following article is by a local student arranged, narrated to, and edited by a Critique staff member.)

By HAL BROWN

"Getting busted is stupid because the laws are stupid. Somebody should do something about changing the laws so more things like this don't happen."

The speaker is a former Tech student under indictment for possession of marijuana. The following is a slightly edited account of his experiences, as told to this reporter.

"I got busted in my car. I was driving down the street. The police came up behind me but I didn't know who they were until it was too late. I got out of the car and handed the police my driver's license. They looked at me a minute, then asked the people I was with to get out of the

"A cop got in the car and found some 'roaches' in the ash tray. I was holding a 'joint' that I had hidden in a cigarette package, but they found that too.

"The police handcuffed us but they didn't have enough sets of handcuffs for all of us so they wired a coat hanger around the hands of one of the guys in the car with me. They wired it together in the middle, but they wired it too tight and it cut off the circulation in his hands. When we got to the station his hands were blue. That's about the only other bad thing that happened when we got busted though.

"When we got to the station they booked us and searched us again. They made us take everything off except our underwear, then they made us shake our underwear.

"Jail isn't really very nice. It's kind of cold. There was only one bunk for three of us. I really don't have any feelings about jail except what I just said. When we first got there we were still pretty stoned and we made jokes about it. When we came down later, it wasn't so damn funny.

"I spent the night in jail. The next morning about five, my father came to bail me out and I went home. I guess I spent about eight hours in jail in all.

"When I got busted I moved back home to the house but I moved out after a while. There really wasn't any hassle there. My parents were pretty good about the whole thing but I think we both feel better when we don't have to see each other every day and be reminded. There wasn't any trouble but there might have been some sort of tension there if I had stayed.

"My mother was in the hospital when I got busted and she took it pretty hard so I felt pretty bad about that but my father was pretty good. He didn't say much.

"Since I came home I've enrolled in the local junior

college and I was waiting to find out what was going to happen. I found out a couple of days ago that I got indicted, but the guys with me got their indictments passed over. I guess they want to get me on the stand and say something that will incriminate the other guys.

"I guess the officers that busted me and the others were all right. There wasn't any police brutality or anything like that. That sort of stuff happens though — I saw some big busts in Houston where pigs were beating

guys up and throwing them in the trunks of cars then just shutting the lid of the car and leaving them there.

"There's pigs and there's policemen. The policemen are just doing their job. I guess pigs just enjoy it or something.

"I think the marijuana laws in this country and especially Texas are stupid. Society is trying to protect itself from something that really isn't going to hurt it. I don't have any animosity toward the cops that busted me or anyone else. They're just doing their job. But I think the

laws should be changed so they don't have to do some of the things they do now.

"I don't know a 'doper' that got busted that's quit smoking, so I guess the laws aren't even doing an effective job of making the people they catch stop what they're doing,

"I used to do a lot more shit than I do now. All I do now is smoke but I've done everything from snorting 'coke' to dropping acid and mescaline. I guess pot could be habitually addictive. It's kind of like TV — you want to watch television so you walk over to the set and turn it on. Same way with dope except you turn yourself on.

"I smoke dope because it's a pleasure. I've never felt worse after I smoked dope. I never had any bad trips on acid or anything like that either. I came kinda close a couple of times when I dropped acid that was stronger than I expected it to be though.

"There's sort of a saying that goes, 'It's not the drug that makes the person, it's the person that makes the drug.' A lot of people can do dope and go on as if nothing happened, but it really affects a lot of people (who do a lot of dope) — their grades drop and some get to where they really don't feel like doing anything at all and just blow everything off.

"When I was doing a lot of dope, most of my friends were doing as much or more than I was. When I really got into dope I don't think I had many good friends or close friends who didn't smoke dope. I have friends now who don't smoke dope but they're mostly guys I went to school with who went to other schools or something like that.

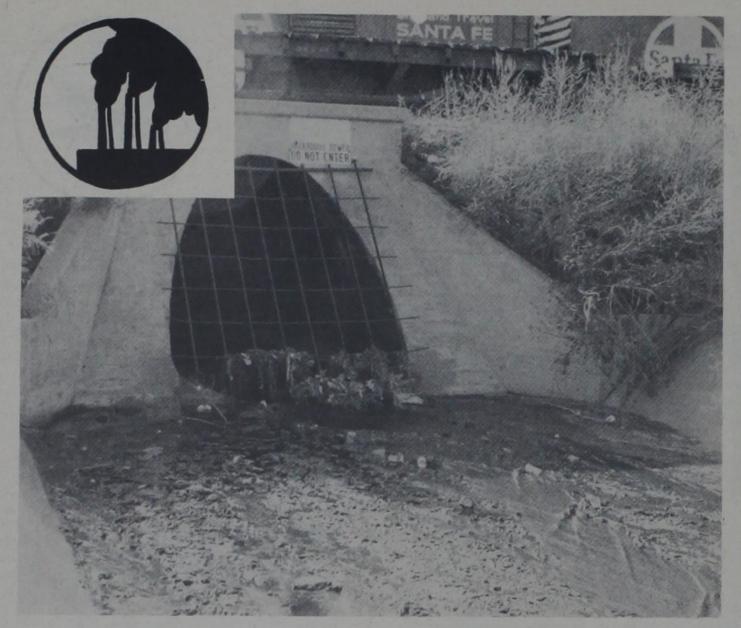

"I guess I started doing dope because pretty many of the people I was running with were smoking dope. It was kind of a crowd thing. Smoking dope was exciting — and illegal — and it was fun to try it. It was just kind of a crowd scene that I got started in. When I started smoking I only smoked with other people. Now a lot of times I'll sit at home and smoke by myself because I enjoy it.

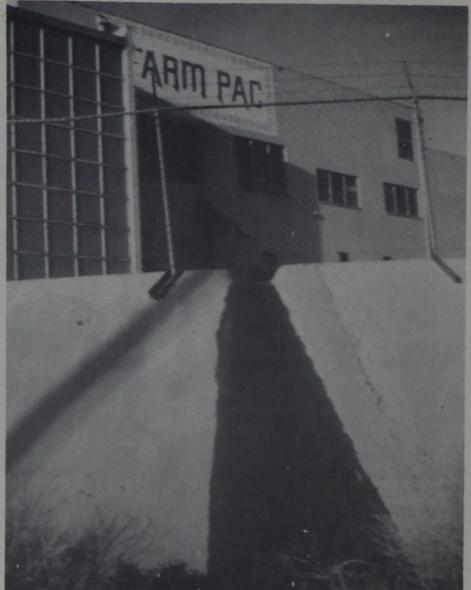

"Getting busted hasn't really changed my political attitudes. I never really was too politically oriented. I'm not a radical and I'm not a conservative — I'm somewhere in between. I really don't think about it too much.

"Some people might call me a radical because I want to legalize marijuana but I'm not. I don't want to destroy the system just because I got busted. I want to change it.

"If I was going to legalize pot I'd make the laws the same as they are for liquor with an age limit around 18 or 21. I don't think young kids who are just getting oriented should do dope, particularly acid and heavier stuff like that. That's bad shit for a lot of young kids."

The Critique, Page 3

Municipal runoff

The 26th Street underdrain (left) and runoff from industries located on the rim of Yellowhouse Canyon (right) have been ter-

med by water officials as some of the main problems concerning pollution of the proposed site of the Canyon Lakes.

Pollutants may condemn new lakes

By DON RICHARDS

In a 1970 bond election Lubbock voters approved \$2.8 million in funds to create recreational facilities in the form of a chain of six lakes through Yellowhouse Canyon.

Today, water officials and even city officials have doubts if the lakes will be clean enough for their designated purpose.

The lakes, stretching inside the city limits from just southwest of Loop 289 and north University Ave. to a little southeast of 19th and Quirt, are intended to be suitable for secondary contact activities such as boating and fishing, according to a report issued by a study firm hired by the city. However, the firm-Freese, Nichols, and Endressalso reported it is unlikely these lakes would be suitable for primary contact activities such as swimming and wading.

THE MAIN PROBLEM with the lakes project now seems to be concerning the water sources. The 1969 feasibility report by the study firm stated that after the lakes were formed, the water level would be kept up primarily by treated city sewage water, releases of municipal cooling systems and runoff from the city's storm drainage system. All three sources have been questioned as to their quality.

"The main portion of the water will come from the Gray farm," said Dr. Dan Wells, professor and director of the Water Resources Center at Tech. "This is the treated water from the city sewage. It is to be taken from the ground by wells and pumped back into the lakes.

"The treated water is clean and clear and bacteria-free, but it is extremely high in nitrates," he said. "The problem there is that

high nitrates tend to promote high algae growth."

THE FEASIBILITY study indicated the nitrates in the water would be no problem if the adding of phosphorus is controlled.

Phosphorus must be present with the nitrates in order to promote any algae growth.

"The catch there is that there will probably be enough phosphorus in the city runoff water to mix with the nitrate and promote algae growth," Wells said. "It doesn't take much phosphourus to get algae growth.

"In tests of the runoff water conducted by the study firm, a high indication of pollution was shown," Wells said. "The water that runs into the canyons is just not too good."

Recently a group of Tech students also studied the water sources for the canyon lakes and concluded that the urban runoff water for the lakes "is highly polluted," but that if a secondary supply of water is of good quality the lakes would be suitable for the purposes proposed.

The present proposed secondary supply of water for the lakes is the treated city sewage water from the Gray farm.

The eight-member student team was headed by faculty consultant Dr. Goerge O. Elle.

"The project took about 10 months," Elle said. "The students took samples of water at different places where runoff water entered the canyon."

In analysing the runoff water the group found that the farther south downstream in the canyon the worse water quality. The water tested upstream showed the least pollution and the water south near the 26th Street underdrain had the greatest pollution.

The group concluded that four of the six lakes, if filled solely with urban runoff, will have a high level of mercury pollution. Also, the group decided that if filled only with urban runoff, all six lakes would need to be diluted with a secondary water source because the runoff would be excessively high in pollution of phosphorus, nitrates and organic solids.

This backs Wells theory of there being enough phosphorus in urban runoff to join the high nitrates in the treated sewer water to initiate algae growth.

The Tech team, however, was unable to determine the sources of the urban runoff pollution and recommended to the city that further study be made to reduce pollution.

"We suspected there might be some raw sewage going through the storm sewers we checked," said Jot Smyth, one of the students in the group, "but we didn't have time to check into it to locate the source."

A LATER STUDY (in 1971 by the same firm) of the makeup of the water for the Canyon Lakes Project also observed that if

> A Critique Interpretive

phosphorus and soluble organic carbon are controlled, the growth of algae will be limited. However, the firm pointed out that this study was based on the addumption that there will be effective control of pollution sources on the contributing watershed.

Robert David Bowersock, former Tech biology graduate, did his thesis last year on the sewage effluent as a water source, and concluded that the no drainage into the canyon from

water, in spite of high nitrates, could be used effectively.

Bowersock said recycled water had been tried before in two California cases and, although not as successful as anticipated, provided pleasant recreational facilities. In one of the cases, however, Bowersock reported that fish kills had been experienced.

"Buffalo Springs Lake has high eutrophication (algae growth) effects and high bacterial counts due to urban runoff and previous agricultural releases into the canyon," Bowersock reported. "Because of the high nitrate content...it is strongly recommended as much urban runoff as economically possible prevented from entering the lake system."

"I've thought that the nitrate needs to be removed before being pumped into the lakes," Wells said. "But perhaps the city's plan of pumping it in and seeing if a problem develops first might be feasible. If the nitrate is too high the problem could be corrected later with the rest of the lakes."

WELLS SAID he felt the worst problem was the storm sewer drainage and general polluting and dumping into the canyon. Water and city officials agree.

"The 26th Street storm sewer drainage is the main cause of the pollution problem into the lakes area," he said. "Much cottonseed oil waste has been dumped through this sewer and for all practical purposes has already ruined Mae Simmons Park Lake.

"The lake is completely ruined for future purposes," Wells said. "Dumpings into the canyon and storm sewers must be stopped if the lakes are to be any good."

THE 1969 feasibility study also recommended that there must be the cattle feed lots or the dumping of undesirable chemical wastes from local industrial plants.

Max Robertson, assistant Canyon Lakes Project coordinazor for the City of Lubbock, also said water from the storm sewers and dumpings into the canyon were the main concerns.

"We are in the process of forming the tools to enforce the laws to stop the dumpings into the sewers and into the canyon," Roberstson said. "We don't have the manpower to stop all of the chemical dumping by some of the industries located just above the canyon rim. In the next city budget we hope to get the needed manpower."

The city currently has one man who collects water smaples and watches for illegal dumpings.

"Algae could be a real problem in the lakes," Robertson said. "If so, this (algae) could also be a real problem to fish and to all recreational facilities.

"We will have to do a lot of cleaning in the canyon before we begin on the lakes," Robertson

"What it may finally entail is the 'slapping' of a few faces of local industries," Robertson said. "We can legally stop the direct dumping of waste into the storm sewers. It is the general street runoff that is the real problem."

THE CANYON currently is filled with much dumped trash, remains of dead cats, dogs and pigs. The water from the 26th Street underdrain runs around, through and over the diseased carcases and into the Mae "immons Park, which is located just above the site for Lake Six.

"We are having to be vigilant about stopping the dumping into

Bikes keep on rollin'...

...smogless

"For men
May come
And men
May go
But we roll on
Forever."

—World Cycles, Inc., ArnoldSchwinn and Co.

By GARRY MANGUM

Rarely is a great invention the child of a single brain. Almost invariably it is the culmination of thinking, of trial and error, of knowledge and experience accumulated over many generations. So it is with the bicycle.

The identity of the first person who thought of balancing himself on a bar supported at each end by uprights from the hubs of two wheels in tandem, is shrouded in a cloak as concealing as that which hides the identity of the first man to make a wheel.

BICYCLES HAVE been part of man's life for nearly 200 years, the first one appearing in 1795. It is a far cry from the streamlined racers of today. Looking somewhat like a kiddie cart, it was pushed along by the rider's feet.

During the next 90 years bicycles went through various stages of metamorphosis. Improvements were added, like brakes, peddles and wheels of the same size.

From 1889 until 1900 the bicycle had its greatest use in United States. Men and women rode them to work. Children rode them to school. Everyone rode them for fun. In 1896 four million persons rode bicycles regularly.

Today, according to bicycle manufacturers across the nation, more than 50 million Americans own one or more bicycles. One factory in Little Rock, Ark., turns out 3,000 two wheelers each day.

BUT AMERICANS are not alone in their enthusiasm for bicycling. Bikes are common sights throughout Europe and in such areas as Nicaragua, Indonesia, Japan and North Africa.

Europeans enjoy the sport of bicycle racing. The most famous bicycle race in the world is the Tour de France. The grueling 2,700-mile course takes 22 days to complete.

Bicycles are also very numerous in Bermuda because private automobiles were forbidden by law on the island until 1948.

A new bicycle "mania" has taken hold on many Americans. Bike shops have recorded record sales and have had waiting lists for as long as three months.

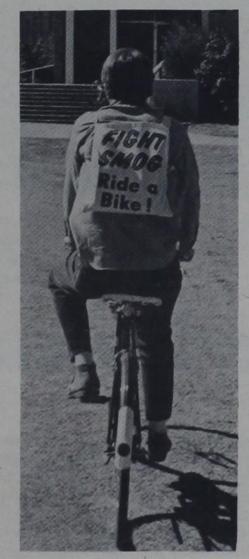

Why?
People are beginning to realize
the value of the bicycle as one of
the most widely known and used
forms of transportation in the
world today. It is also a great
health and recreation asset as
well.

Just as there are cars for every type of person and pocketbook, the same is true of bicycles. All sizes, shapes, colors and lengths of bicycles exist for sale.

PRICES WILL RANGE from the expensive professional racing speed bikes, costing around \$375-500, down to the good three speed, costing around \$35-\$45.

But if you find yourself without the ready cash, or if you live in a city known for bike thieves; if you think to ride over a couple of miles when a car is available is crazy; then get any bike, the cheapest you can find and forget about caring, feeding and worrying for an expensive model.

If some of the above applies to you get a cheap new three speed (\$35-\$45). This kind deserves

minimum care: keep air in the tires, oil on the moving parts, and avoid contact with objects like moving cars, trees or fences.

If you are not poor and just want to get into bicycling for bicycling, you have a choice. If you stay in the city, you can get a really good 3-speed lightweight bike.

Compared to the cheaper bike, it'll be lighter, which isn't really important. It will also be stronger (always important), quieter, and generally easier to ride.

It should be cared for as with the cheaper bikes, although perhaps more thorough, and with more love. This is also the point where bikes start to look good to professional thieves—get a good chain, the strongest you're willing to tote, and use it. THE DISCOUNT house 10speed is another choice. If it
weren't for the 10-speed's dropped handlebars, an absolute
necessity of any serious cycling,
I'd rather have a 3-speed. But the
10-speed is a reasonal compromise in many areas. It is
really a cheap "English racer"
frame type bike.

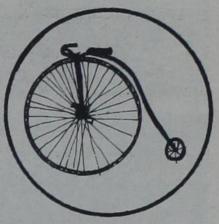

There are also bikes designed for one thing: serious bicycling. Many times you'll see a greenhorn on one of these. They don't really enjoy it all that much. They just want the status of owning it. There is a shortage of good bikes around because of this practice. The ones available command premium prices and serious cyclists deserve not to get ripped off by unscrupulous bike stores.

There are essentially three classes of 10 or 15 speed bikes. (A 15-speed is only necessary if you live in the Alps or Rockies. They are absolutely unnecessary except for going up mountains.)

The low-priced 10-speeds (\$85-\$100) have the same components usually as the discount house brands, but with bigger frames, 27-inch wheels and instead of side-pull handbrakes perhaps the center-pull variety.

THE NEXT CLASS will cost \$25 to \$60 more, but with components like quick-release hubs allowing wheel removal without tools, better center-pull brakes, better gears with wider range, a better seat and better peddles, it is worth recommending the intermediate price 10-speed.

In this price range you have a right to demand Reynolds 531 tubing for the frame. This is absolutely the best frame material you can buy. It is strong, light, rigid when it must be, and resilient where it should be to cushion bumps.

The intermediately priced 10speed is as good as most any cyclist needs. In every area, it gives at least the bare minimum of a really good bike—it is stronger, lighter, smoother than anything cheaper, and a good investment if it isn't stolen.

Unfortunately, this kind of bike appeals to amateurs, and professional thieves alike. If you must have a bike in this class or above, try to make sure it is included in a homeowner's or renter's insurance policy, which covers about \$5,000 worth of stuff or about \$25-\$50 per year. You can afford the insurance as well as you can afford to replace the bike if it is stolen.

ABOVE \$150, you're paying for frills, but if you appreciate fine machinery, you might be willing to pay for it. Again the bike will be lighter, through the use of aluminum alloys wherever possible instead of steel. It's also more delicate due to its tubular tires. More precision goes in the bearings, making the bike feel friction free.

Such a bike is beautiful, but really very few people need them.

The slogan I began with is surely prophetic of bicycles and cycling. The bicycle will always remain man's cheapest and simplest means of individual mechanical transportation, and its value for health and recreation in a world of too much sedentary living is beginning to be better understood and appreciated.

You are ready now, so make your choice and be happy. Take care of your bike and you'll have transportation that won't run out of gas, and can only make you healthier.

Lakes may be condemned by pollutants

From Page 4

the canyon," said Gordon Willis, head of Lubbock's Water Treatment Plant. "We have had reports of dumpings of septic tanks and oil tankers into the canyon and storm sewers. They are supposed to be dumping into the sanitary sewer and not the storm sewer."

Willis said the cottonseed oil mill just above the 26th Street sewer had been contacted about the dumpings.

"They (the cottonseed oil mill) had a line into the storm sewer where they dumped their wastes," Willis said, "but I got a letter from them saying this line

had been sealed off."

Willis said the city had contacted dairies, steam cleaners, garages, car washes, service stations and other businesses about city ordinances concerning illegal dumping.

"OUR PEOPLE are watching and turning in reports every time they see a dumping in the sewer or canyon," Willis said. "We have one man that regularly works on the problem, but all street crews and city servicemen have been notified to report license numbers and addresses of any dumping vehicle.

"We haven't had any problems with cattle feed lot wastes in the

area," Willis said. "The Water Quality Board has the feedlots pretty well in control."

The Texas Water Quality Control Board, however, is skeptical of the entire project.

"There is absolutely no way to control the many outlets of runoff water into the lakes as they are proposed," said Joe Teller, deputy director of the Texas Water Quality Control Board in Austin. "Because of the completely uncontrolled runoff water, we questioned if the project should even proceed," Teller said. "The quality of water will not be near as high as we think it should be for contact sports.

"We talked with city officials ahead of time and told them that by the very nature of the lakes the water will not be of very high quality," Teller added. "We cannot endorse this water for any type of contact sports.

"YOU HAVE to be realistic," said Teller, who is also a Tech graduate. "If people are going to be in contact at all with this water then they are going to get so much of it in them. For this reason we feel it should almost be as good as regular drinking water.

"The normal municipal runoff will be enough alone to get the lakes in bad shape," Teller said.

THE CANYON, because of uncontrolled dumpings into storm sewers and directly into the canyon, and general municipal runoff, is already in "bad shape". If the canyon lakes, which should be filled by late 1974, Lubbock city officials must take some environmental steps immediately to correct a long-overlooked problem.

If Lubbock citizens are to get the quality of recreational facilities they are expecting from the \$2.8 million project, the city must provide the needed manpower study, resources and enforcement needed to stop the obvious pollution of the lake site.

Unless it's already too late.

The Critique, Page 5

"I'm the only one that can look at the University as a whole..." — Dr. Grover E. Murray

"I once received a technical as coach in a basketball game for telling my players to yell that the other players' shoes were untied." — Dr. Glenn Barnett

A little closer look at Tech's...

Dr. Grover E. Murray

By LAYLAN COPELIN

Getting a close personal look at a university president (there are fewer than 200 of them in the U.S.) is not always easy, even though many of these men have reluctantly been put in the public eye recently due to campus unrest.

What are these high-salaried, harried administrators really like?

Texas Tech President Grover Murray, though separated from the average student by \$40,000 yearly salary, a university-furnished home on 19th Street, football seats in the VIP pressbox, and a growing number of "middle men," donated seven hours from his schedule to explore a common myth: university presidents are beady-eyed men who continually glance at their watches, waiting for an appropriate time to jet off somewhere else.

This is the man: a bow tie addict because it has become his personal identity symbol, a geologist because he wanted to make a good living doing something he liked, and a teacher because he wanted to escape the administrative work in the business world. (Ironically, he once resigned the chairmanship of Louisiana State University (LSU) Geology Department, tired of those administrative duties, only to come to Texas Tech later and assume the heavier administrative duties as university president.) "I came because I felt I had something to contribute to this institution (Tech)," said Murray.

At first Murray could not point out one project or moment in his six years as Tech president that exemplified a personal success or failure above all others. "Except for Dr. (Glenn) Barnett, I'm the only one who can look at the university as a whole." Finally, he cited the "quality of people (administrators and faculty) I attracted to Tech" as his personal achievement. His modesty notably arose out of his diplomacy, not wanting to alienate any group by mentioning another as his personal achievement.

The road to the presidency and his self-confidence in his ability to handle the job took Murray 25 years of university experience as a student, faculty member and chairman. He started at the bottom, washing dishes in the cafeteria to pay for his undergraduate schooling at the University of North Carolina. (He received his B.S. in Geology in 1937.) Graduating with five other geology majors during the depression, he was unemployed, and as many students are doing today, decided to further his education. Murray had the choice of three scholarships. He took the most lucrative—\$37.50 a month at LSU.

Murray's love of travel continues today. He has collected art objects and photographs from his 16 jaunts around the world to 70 countries.

There are lighter moments to being president of a university. Even the Murrays have had parking problems at Tech. The driveway to their house, adjacent to busy 19th St., is only one-lane wide, so Mrs. Murray cannot have "come as you please" teas. "When one person wants to leave, everyone parked behind her has to move," she said.

As Tech president, Murray lives with other nuisances not so dramatic. Several times taxis have been called to his home by some anonymous caller. This did not bother Murray very much, but when he opened the door one night to see an ambulance, stretcher unloaded, in front of the house, he did not appreciate the humor of the prankster. At other times in the past, during controversial issues about the university, Mrs. Murray said they would receive anonymous phone calls "with heavy breathing."

Murray's parking problem is more similar to students; he had his university-furnished Cadillac towed away by campus police. His daughter had parked in someone else's reserved parking space.

Murray seldom drives to work since walking is one of the few activities he can still pursue. He once enjoyed jogging, but eye surgery ended that pasttime. Besides walking, he spends free evenings reading or watching sports on television. The bookshelves are filled with nonfiction mainly, with Murray's latest fictonal accomplishment being "The Sensuous Woman." His only comment was, jokingly, "Some points were interesting."

No longer a stranger to West Texas or Tech, Murray estimates he knows 20 to 25 students personally as friends, hoping to break down any impersonality Tech students might see in their university. "Any student can get to know me. All he has to do is make an appointment with my assistant, Mrs. Jean Baker. I see at least 200 students a year." Murray admits his schedule will not allow him to "drink a beer with the students" (though he said that didn't mean he would not enjoy it) but he welcomes all students for a visit.

(Excerpts reprinted from The Exordium)

Dr. Glenn Barnett By LAYLAN COPELIN

Having worked in education for 35 years in all levels from elementary to university, Executive Vice President Glenn Barnett admits he never intended to be a teacher and his father only approved of Barnett's professional choice a few years ago.

"He finally decided I would be a success," said Barnett, who makes \$36,000 a year as Tech's number two administrator.

Had it not been for the depression, Barnett might now be a civil engineer as his father always hoped he would be.

"I had not really considered any profession after high school. I wanted to go away to school, but there just wasn't money.

"Finally, after looking around Kansas City (his hometown) for a job but having no luck, I saw a girl from my high school. She suggested that I attend KC Teacher's College because the tuition was only \$12.50 a semester and I could live at home," said Barnett.

When asked by the president of the college if he wanted to be a teacher, Barnett mustered a "maybe" and thus began his academic career.

Barnett was in school for only a year when he had to drop out for financial reasons.

Working that year at Sears and Roebuck, Barnett

received his "best administrative training." He was in charge of the transfer cage, where the parts shipped from many plants were assembled by him in one package.

"I have spent more money for cars, and have driven more cars," he said.

His first car, a 1932 Model-B Ford purchased when he was 17, was wrecked the day Barnett was driving home to show his new possession to his mother.

Because the gears were hard to shift in the car, Barnett said he was driving too fast, trying to make it up a steep hill without shifting. He lost control of the car a block from his home and wrecked the left fender, costing a week's salary to repair the damage.

Later, as an associate professor at University of California at Berkeley, Barnett bought an Austin A-40, a vellow convertible with red seats.

When his dean asked "why the hell did you buy that car," Barnett, a father of two weeks, said, "It was the first thing my bov asked for."

But Barnett's son was soon the end of the yellow convertible. Mrs. Barnett, unable to carry the baby to the doctor in the open car (due to California fog and wet weather), sold the vehicle while Barnett was out of town.

Asked if that upset him, Barnett said, "Of course not, that is the kind of relationship we have. It keeps things exciting."

Today Barnett drives two conventional Thunderbirds and a 1966 Lincoln.

But Barnett almost had to leave school again for stuffing ballot boxes. "My group put up a slate of officers to oppose another campus group. As it turned out, both groups were stuffing the ballot boxes. But our group knew to take out 50 ballots for every 50 ballots of our own. The other group didn't, so the election total came out higher than the enrollment of the college," said Barnett.

"The president threatened to kick all of us out; but instead we were expelled from campus politics," he added.

After graudation, he taught in elementary and secondary schools. As a history and English major, Barnett was also called upon to coach basketball, teach math and drama, and sponsor the newspaper.

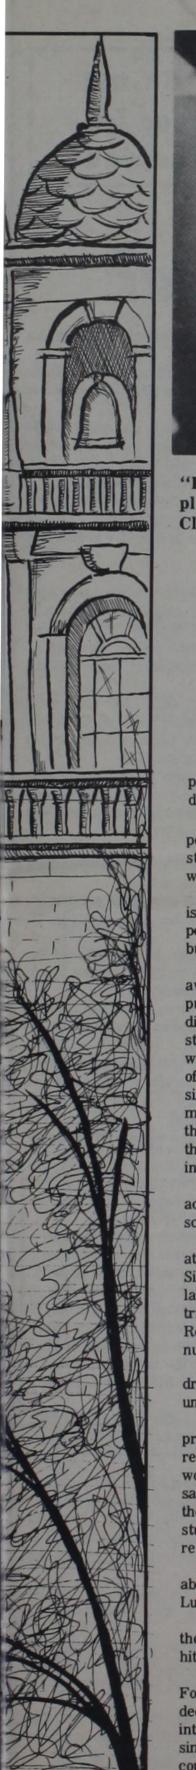

"I hated coaching because I could never sleep after a game whether we won or lost," he said.

Barnett once received a technical in a ballgame for telling his players to yell that the other players' shoes were untied. Later, Barnett's former coach came to his defense with the referee, saying, "I coached him (Barnett) that way."

Barnett received his doctrate, his draft notice, and his commission in the Navy all the same day, in 1943.

"I was a 90-day wonder, and played in the drum and bugle corp so I wouldn't have to drill," he said.

Later during the war, Barnett was assigned to the Chief of Naval Operations. His assignment is secret to this day, with Barnett only saying that he had to learn to speak Russian while in the Navy.

"I partially financed my studies at Tech by playing the clarinet and saxophone in a Cotton Club band." — Dr. Owen Caskey

"I once hitchhiked in a gasoline truck — to Fort Worth from Lubbock — with a birddog." — Dr. S. M. Kennedy

... top four administrators

Dr. S.M. Kennedy By JIM BUSBY

It's hard to forget you're talking to the vice president for academic affairs even when he does look like a good-hearted golf pro.

Also, there seems to be an unwritten law, perhaps a natural law, that administrators and students must follow only the rules of civility while waging their contest with one another.

This is understandable. To the student, there is the despicable, heart-of-no-shame villain: a politician lost in cushioned chambers of the Ad building. Snidely Whiplash with a briefcase...

The administrator sees the young, self-aware (if not arrogant) boy or girl, intent in purpose—the purpose usually being illegal or distasteful. Especially repugnant, possibly, are student journalists. These young muckrakers wield the mighty, though sometimes clumsy, pen of freedom predestined to upturn and expose sin—whether it exists or not. Someone, the administrator must think, is going to be impaled by that idealistic ballpoint. He must know, too, that this Fourth Estate Viper can muckrake himself into dismay.

Dr. S. M. Kennedy, vice president of academic affairs, came to Tech as a freshman scholarship student in 1938. He was 15 years old.

He had been high school valedictorian, and at Tech he joined the government honorary, Phi Sigma Alpha. Kennedy said he was in the prelaw club and was defense counsel for mock trials. He was president of the International Relations Club at Tech and "fairly active in a number of other clubs."

As an undergraduate, Kennedy said, dropping out of school and going to work was a unique experience common to students.

"When I hear problems of students at the present tme, I'm not without some ability to relate. Like most other students of that time, I worked the bulk of my way through," he said. He said as an undergraduate he graded papers for the government department and worked for the student activities program, the summer school recreation program and local cafes.

In those days, Kennedy said, there were about 3500 students at Tech. The population of Lubbock was about 30,000.

"All the students, when they went home—if they had no cars and no money—hitchhiked. I've hitchhiked all over the western part of Texas.

"I once hitchhiked in a gasoline truck—to Fort Worth from Lubbock—with a birddog. I decided at the end of that trip that I had no real interest ever in trying to hitchhike with dogs, so I simply gave the birddog to the driver for his courtesy. I felt like I got the better part of the deal."

Considering students then and now, Kennedy said, "Student bodies came from a society. They don't make a society... and when attitudes within society in 1940—before World War II, coming on the heels of a big depression—was reflected in the student body.

"Universities are not islands. They're part of the world around them, and they probably tend to reflect the world more than they do to condition it."

He described administration as a "source of great personal satisfaction."

"When you see someone you haven't seen for five years or a decade or so, and they tell you what kind of impact you've made in their lives—either with an administrative decision or a professorial role—this buoys you up more than almost anything.

"I think an administrator has to have the ability to give his full attention to a problem when it's before him and make the most humane and effective decision that his judgment, the facts and the resources make possible.

When I'm absolutely fed up with the problems of the day, I go out into my workshop and make a gallon of sawdust."

Claiming survival and his family to be two major personal triumphs, Kennedy described himself as an optimist with self confidence and a feeling that "things can get done."

Rejected recommendations and "students who could, but don't do well" are personal defeats, he said, but one must not "brood about what might have been."

Dr. Owen L. Caskey

By MARSHA NASH

Few members of the Tech community would guess that in the late 1930 s the Associate Vice President of Academic Affairs partially financed his studies at Tech by playing the clarinet and saxophone in a Cotton Club band.

Today when he is not in his office, Dr. Owen L. Caskey is a very casual man who finds his greatest pleasure outdoors where his favorite sport is "just sitting and rocking."

Caskey owns a lake cabin at White River Lake, and whenever he has a day off, he goes there. "I'm not much of a fisherman," he said. "I just do it to get out. I like to fish, but I refuse to work at it."

Before coming to Tech the Caskeys lived in Colorado for about 10 years. While living there, he became attached to the high country and wilderness areas. When time permits, he takes his family to the Grand Mesa and Poudre River areas. He said the last time he and his family had an opportunity to vacation there was three years ago.

When he lived in Colorado, he enjoyed

lapidary work and had a rather extensive gem stone collection.

"The fun of that was being in the mountain area where I could get the stones and do my own cutting and polishing."

He has since sold his lapidary equipment because "it is no fun to purchase stones or polish someone else's."

Caskey was raised in Mineloa, a small town in East Texas. Later his family moved to Lubbock where he finished his last two years of high school.

He claims his early life was the same as everyone else's. "Life styles didn't differ much in those days." he said. "I worked 40 hours a week at Hanna-Pope—a competitor of Hemphill-Wells, played two nights a week in a dance band and took a 16-18 hour course load. I had to do that to stay in school and everyone who went to school in those days did the same."

When he came to Lubbock, Caskey met his high school sweetheart, whom he married after they came to Tech.

educational psychology professor. He became vice president for student affairs in 1968, and in 1970 he was appointed to his present position—associate vice president for academic affairs.

Caskey is responsible for admissions, counseling and advising, student studies and planning, financial aids, registration and the office of the Registrar and continuing education and orientation. He is also responsible for the student Health Center, the Placement Center, the University Center, Student Publications, the Office of the Dean of Students and student recreation.

These administrative responsibilities leave him with little free time. He has a two-week vacation in the summer, and usually conflicts force him to take each week separately.

He is closely aligned to students by Leigh, his daughter who is a junior anthropology major at Tech. He has another daughter, Debbie, who is a junior at Monterrey High School.

Caskey views the modern student as a product of changing life styles.

"Students are changing in many ways, some subtle, some drastic, but in almost every way the changes are desirable. They are more capable and concerned, they participate and produce more and all of us will be all the better for this

"The university has had difficulty adjusting to the growing interest, increased concern and changing life style of these students. Our changes for the most part are gradual.

"Higher education has responded to the student of the '70 s —perhaps in not as many ways or as rapidly as the students wished, but more rapidly than I thought possible when reviewing education in the last century."

"Do not be too moral. You may cheat yourself out of much life so. Aim

above morality. Be not simply good; be good for something." —Thoreau

Abortion-moral or legal issue?

By BETSY JARMON

When a woman wants to end an unwanted pregnancy, her only solution is abortion.

Despite the moral problems abortion poses for some and legal restrictions in some states, abortion is the most widely used method of birth control.

One out of every five pregnancies in the U.S. ends in abortion, according to figures compiled by Martin Ebon, editor of "Every Woman's Guide to Abortion."

GWEN VAIL, abortion counselor at Lubbock Planned Parenthood, says she gets an average of ten calls per day from women who want abortions.

Mrs. Vail said all abortion referrals are strictly confidential. She said a woman even can call her on the telephone and make arrangements to have an abortion without giving her name.

Mrs. Vail said she prefers to refer women to Los Angeles because abortions are cheaper there and arrangements including meals and lodging are responsibly made by a group in Houston.

Abortions in Los Angeles are "perfectly legal," said Mrs. Vail.

COST OF ABORTION in Los Angeles until the woman is 14 weeks pregnant is \$210, said Mrs. Vail. Round trip youth air fare is \$98, and the woman also needs a maximum of \$20 spending money, she said.

From the 14th to the 15th week of pregnancy, the cost of a Los Angeles abortion is \$380. From the 16th to the 20th week, the cost is \$490. In California, abortion is illegal after the 20th week of pregnancy.

Abortion is also legal in New Mexico. Although New Mexico is closer than California, abortion is actually more expensive there, said Mrs. Vail.

Until the 8th week of pregnancy, the cost of a New Mexico abortion is \$281. But from the 8th to the 12th week, the cost is \$410.

Other disadvantages of a New Mexico abortion besides cost are that the woman must make all arrangements herself and the abortion operation is not

A CASE AGAINST ABORTION

"The unborn child is a human being in the same degree and by the same title as its mother. Moreover, every human being, even the child in its mother's womb, receives its life DIRECTLY from God, not from its parents, nor from any society or authority...Innocent human life, in whatsoever condition it is found, is immune from the very first moment of its existence, to any deliberate attack...The life of an innocent human being is invioble, and any direct assault or aggression on it violates one of those fundamental laws without which it is impossible for human beings to live safely in society."

-Pope Pius XII

performed during the weekend.

IN LOS ANGELES, abortions are done on weekends. If a woman is less than 12 weeks pregnant, she can have a relatively simple abortion during the weekend in Los Angeles.

There are three widely used methods of abortion: dilatation and curettage, vacuum aspiration and amniocentesis or "salting out."

Dilatation and curettage (D & C) and vacuum aspiration are less painful and easier to perform than the "salting out" process. These two methods are used in the earliest stages of pregnancy (before 12 weeks).

In a D & C operation, the doctor inserts a small, smooth spoon-shaped instrument through the dilated opening to the woman's cervix. He scrapes the fetal matter from the woman's uterine walls.

A D & C only takes from ten to 15 minutes.

The newest method of abortion is the vacuum

aspiration method.

FOR A VACUUM aspiration the opening to the womb is enlarged slightly and a small hollow tube is inserted into the uterus. Fetal matter is removed by negative pressure or suction applied by a special vacuum pump attached to the tube.

The entire operation takes five minutes or less.

Both the D & C and vacuum aspiration methods are painless. A local anesthetic is used.

Late abortions are usually done by "salting out." A woman usually must wait until the 16th week of pregnancy to have this operation when there is enough amniotic fluid in the womb to perform the operation.

The amniotic fluid in the woman's uterus is withdrawn, and replaced by a saline or salt solution. The saline solution induces labor. From 12 to 48 hours later, a nonliving fetus is expelled from the womb.

ILLEGITIMATE PREGNANCY

"One girl out of six who is now 13 will, according to present statistics, become illegitimately pregnant before she is 20 — two and one-half times the incidence of 20 years ago."—Dr. Rollo May in LOVE AND WILL (p.66)

WOMEN'S LIB ON ABORTION

Repeal of restrictive abortion laws "is the number one problem facing women in this country—not the common cold or any of those things that Jerry Lewis has telethons for. Women are dying from butchered abortions in this country faster than men are dying in Vietnam."—Gloria Steinem, in a speech at SMU Thurs., Feb. 3

"Salting out" takes longer and is more painful than a D & C or aspiration.

Mrs. Vail stresses that abortion is much more difficult and more expensive than any form of birth control used to prevent conception.

However, if a girl gets pregnant, she urges her to decide as soon as possible whether she wants to have an abortion, since operations performed before the 12th week are easier, cheaper and safer than those done later.

Mrs. Vail said funds for those who want an abortion but cannot afford one are sometimes available. She said she will try to help anyone who lacks funds for an abortion find the money.

ABORTION REFERRAL agencies are sometimes advertised in newspapers and magazines. Sometimes these agencies are rackets, Mrs. Vail said. "If a referral agency wants money, go somewhere else," she said.

Referral at Planned Parenthood is made without charge.

According to statistics, abortion is a safe way to end pregnancy. Dr. Hale Harvey, director of an abortion clinic in New York, reports there have been no deaths and a complication rate of 0.6 per cent at the clinic.

In 1964, only two deaths from 358,000 therapeutic abortions were reported in Hungary. In the U.S. the death rate from childbirth and complications of childbirth was 24 per 100,000.

EMOTIONAL PROBLEMS for those who have abortions have been described as minimal.

"There are emotional problems with pregnancy, period," said Donald Coleman, abortion counselor in Lubbock.

Coleman said of the 50 women he has referred for abortions, only two have had emotional difficulties. Those two had emotional problems anyway, he said.

Most who have abortions experience a feeling of relief and freedom to continue life without an unwanted child, he said.

Dr. Robert W. Laidlaw, a New York psychiatrist, said, "The escape from the burden of an unwanted pregnancy in many cases serves as a catalyst toward further psychotherapeutic advance."

For many people, abortion is a moral rather than a legal or medical question.

A CASE FOR ABORTION

"I believe the basic obligation we have to a new human being is that it be wanted. We will never all be created equal, but we will be able to come closest to that ideal when we are all born wanted. It is, therefore, logical that I accept abortion. The only ethical and moral position I can take is to allow any woman who does not want to be pregnant to be aborted – with dignity, by the physician of her choice, at a price compatible with other medical services."

-Dr. Seling Neubardt
-A Concept of Contraception

WHEN DOES a fetus stop being a fetus and become a human being? In California that point is defined as after 20 weeks of pregnancy, and in New York 22 weeks. In Maryland, a legal abortion to protect the life or mental or physical health of the mother can be performed through the 26th week of pregnancy.

Author Garrett Hardin says a woman who cannot have a legal abortion is forced into "compulsory servitude."

"The unborn child is a human being in the same degree and by the same title as its mother," said Pope Pius XII. "The life of an innocent human being is inviolable ..."

Who should decide whether an abortion is right—the mother or the state? That debate will continue for a long time

But safe, legal abortions are now available for those who desire them.

Tech coed tells of abortion

(EDITOR'S NOTE: The following article was written after a telephone conversation with an anonymous Tech coed. The contact was arranged especially for The Critique by a Lubbock abortion counselor.)

She is young, and a Tech student.

Last spring she had an abortion.

"The baby's father and I were going to get married," she said.

But they decided not to.

"I thought about it a lot," she said. She said she thought she was too young to have the responsibility of a baby then.

"IT TOOK ME a long time" to make the decision, she said. She said she thought about "whether or not I could have the child-it's a 25hour job" and the money involved in having an abortion.

"If I had had a child, I wouldn't be going to school now," she said.

She said she had thoughts of going off somewhere and starting a new life with the baby, or telling her parents about her pregnancy and coming home to have the baby.

Giving up her baby for adoption was never an option, she said.

"I know about adoption institutions and I don't like them.

"I made the final decision by myself and then told the father.

"I didn't tell my parents. No one knows about it but the father because I did it on my own."

SHE SAID SHE went to Albuquerque to have the abortion. She stressed the importance of having

an early abortion because they are easier and less

Her own abortion was performed by vacuum aspiration, a relatively simple and painless operation.

"The actual thing didn't take long. There was hardly any pain-it feels about like bad cramps."

She said there were girls and older women at the hospital who were having abortions too, and it helped to talk with them and know she was not the only one going through the operation.

What is her advice to others who are faced with an unwanted pregnancy? "Don't feel as if you're being selfish, but go on your own morals."

She said a girl should not have an abortion because she has been pressured into it by the father of her baby. "He's not going through anything. It should be her privilege to get rid of it."

Although it is hard to make the decision to have an abortion "you have to do it all by yourself," she

"Sometimes you have to take into consideration the emotional problems of pregnancies. Abortion is the lesser of two evils sometimes," she said. It may be worse to be single and pregnant or to have to get married, she explained.

"To me abortion is not evil," she said. "Those people who say abortion is evil and they would never have an abortion say it because they've never been faced with the problem."

ABOUT HER OWN abortion she says, "I think it was for the best. Sure I made a mistake, but why should I have to pay for it all my life?"

Dangers of illegal abortions

There currently exist only four methods of abortion which can be considered safe - and only under clinical conditions. Competent, medically trained abortionists, whether they are acting legally or not, NEVER use methods described below. These methods involve extreme pain and can lead to permanent disability, infection, or death:

ORAL MEANS

Ergot compounds - overdose in poison - can cause fatal kidney damage

Quinine Sulphate-can cause deformities in fetus, or death to mother.

Estrogen-useless in the vast majority of cases. Castor Oil - useless

No drug or compound has been yet developed which can be taken orally to cause abortion without also causing death or serious injury to the mother

SOLIDS INSERTED INTO UTERUS:

Knitting Needles Coat Hangers Slippery Elm Bark Chopsticks Ballpoint Pen Paste Catheters Gauze (packing)

Artists Paint Brushes Curtain Rods Telephone Wire

objects into the uterus include perforation of womb and or bladder; death from infection or hemorrhage is probable.

FLUIDS INSERTED INTO UTERUS:

Soap Suds

Alcohol

Potassium Permanganate

Lye

Lysol

Pine Oil

Severe burning of internal tissues, accompanied by hemorrhage, shock and death generally occurs.

AIR PUMPED INTO UTERUS:

Collapse from gas emboli in the blood stream. Sudden, violent death.

INJECTIONS INTO **UTERINE WALL:**

Ergot Pitocin Sodium Pentothal

OTHER MEANS

Vacuum cleaner connected to uterus - not to be The most common danger in insertion of solid confused with vacuum aspiration — is fatal almost immediately: this method inadverdently extracts uterus from pelvic cavity.

Physical exertion (ie. lifting heavy objects, running, etcetera): useless

Falling down stairs: severe injury to mother is most likely, but generally no abortion occurs.

Horseback riding: good exercise. Riding may build up those muscles necessary for childbirth; unfortunately, successful abortion does not occur.

BUTCHER ABORTIONS ARE DEADLY.

Only doctors or other specially trained personnel can safely use one of the four methods of abortions in common practice (dilatation and curettage - D&C -, vacuum curettage, Intramniotic hypertonic saline injection-"salting-out"-, or Prostaglandins)-all other methods can cause death, but rarely induce

If you have used on yourself or have allowed to be used any of the above "methods of abortion," go to the nearest hospital or free clinic IMMEDIATELY.

entitle of a stand

New age, new awareness

Birth rate can be limited

By MARSHA NASH

Restraint, a quarter-between-the-knees and the chastity belt are very effective methods of birth control, but most couples prefer a more conventional method.

Some magazines—"Playboy" and "Cosmopolitan," more specifically—claim the pill permits unlimited and unrestricted sex. Whether the familiarity linked with sex in movies, magazines and other media has created an increase in premarital sex is questionable. However this openness or frankness has created an awareness in the use and need for birth control.

TEN YEARS AGO, posters were not printed of the Pope pointing his finger and proclaiming, "The pill is a no, no!"

The pill works in several ways. First, it makes the woman "pseudo pregnant." This occurs because the pill contains synthetic progesterone which instructs the pituitary gland to stop secreting the hormones that cause ovulation.

The pill also causes a thickening of the mucus surrounding the cervix (or opening to the uterus) so that it becomes unreceptive to sperm; they cannot penetrate. Should an egg somehow be produced and fertilized, the pill changes the lining of the uterus in such a way that the fertilized egg cannot become implanted in the uterine wall and start to develop. Sometimes the pill is prescribed to regulate painful menses and to control heavy bleeding. The progesterone in the pill prevents the uterine lining from becoming overgrown.

THE PILL IS NOT the only means of contraception. Before the advent of the pill, the diaphragm was the method most often recommended for birth control. It is made of soft rubber and is shaped like a bowl with a spring made of flexible steel or highly tensile coil at the outer edge.

The diaphragm is inserted into the uterus so that the dome forms a mechanical barrier that prevents the sperm from swimming toward the cervix. It must be used with a spermacidal jelly which will kill any sperm that move past the rim. It is recommended that the diaphragm and

jelly be inserted not more than three hours before intercourse. first drops of semen contain the highest concentration of sperm, Coitus Interruptus demands a great deal of

ANOTHER RELIABLE contraceptive is the intrauterine device (I.U.D.). With the I.U.D. there is nothing to do before, during or after sexual relations. Since it has no effect on the natural hormone balance, it does not cause nausea, headache, depression, weight gain or fluid retention. However, the chance of pregnancy exists, as well as side effects—bleeding, infection and "fall out."

The pill, diaphragm and I.U.D. must be prescribed by a doctor after a complete examination. Only a doctor can fit a woman properly or prescribe the brand of the pill that will be most effective for the individual.

There are methods of birth control that do not require a doctor's prescription. However with the use of these methods is a high pregnancy risk.

THE SO-CALLED "rhythm method" is based on the theory that a woman's fertile period can be detected by charting fluctuations in daily body temperature. This is the only birth control technique approved the Roman Catholic Church. The rhythm method is one of the least reliable methods; some experts say that no more than six out of ten women can use rhythm effectively.

Before employing the rhythm method, a woman should keep a careful record of her menstrual cycles for several months. A doctor's supervision is considered absolutely necessary.

One of the most frequently used devices for birth control is the condom, better known as the "rubber" or prophylactic. The condom functions by preventing the sperm from entering the vagina and moving through the womb and Fallopian tubes to fertilize the egg. It is made of thin rubber and shaped like the finger of a glove. The condom can be purchased at most any drugstore.

Coitus Interruptus is a less preferable form of contraception. It is the withdrawal of the penis from the vagina immediately prior to ejaculation so that semen is deposited outside the woman's genital tract. Because the first drops of semen contain the highest concentration of sperm, Coitus Interruptus demands a great deal of precision and self control on the part of the male. Besides being unreliable in preventing conception, withdrawal often limits the woman who may be slow in reaching orgasm.

Any couple who engages in sexual intercourse should take some precautionary measure to prevent pregnancy, but which contraception they chooses depends on their individual circumstance.

STILL IN THE planning stages, with some public use through a doctor's supervision, is the "morning after" pill. However, the pill made up of estrogen may entail side effects.

For instance, if you happen to be an alcoholic or a drug addict and have suffered hepatitis, blood clots or migrane headaches, you may experience vomiting and nausea, as a small price to pay. The pill has been tested at Yale University and proved almost 100 per cent effective.

It should not be used as a contraceptive, because of the large amounts of estrogen, but mainly as a back up in case something went wrong "the night before." Your physician can also prescribe pills that will combat the nausea.

Total cost of about five "morning afters" is about \$3.

ONE OF THE surest means of birth control is the vasectomy. Vasectomy is a minor operation performed on the male and generally takes about 30 minutes. The object of the operation is to clip the ducts which carry the sperm. This, however, does not interfere with the seminal fluid duct, but instead, stops the source of egg-fertilizing sperm.

The simple operation can be performed by most surgical doctors and the cost is relatively inexpensive. A normal vasectomy, with no complications, costs anywhere from \$50 to \$100 depending upon the surgeon. Normal surgical soreness lasts three to four days, but patients who have the operation on a Friday are generally back to work by Monday.

METHOD	EFFECTIVENESS (number of likely pregnancies among 106 women using this method for One year)	POSSIBLE SIDE EFFECTS	DOCTOR'S VISIT REQUIRED	COST
STERILIZATION	0.003	None	Operation performed by physician	Cost of operation
THE PILL	0.3	Weight gain, nausea usually ending after several months	Must be prescribed by physician (periodic check-up advised by most physicians)	\$1.75 — \$2.50 a month (plus physicians fee)
INTRAUTERINE DEVICES	5	Irregular bleeding, discomfort in beginning	Must be inserted by physician or trained technician	Minimal (physicians fee generally includes device)
DIAPHRAGM OR CERVICAL CAP (with jelly)	12	Jelly may cause minor irritation	Must be fitted by physician (a return visit may be required)	\$3.00 — \$5.00 (plus physicians fee; plus cost of jelly; \$1.00 a month or more)
CONDOM	(increased effectiveness if used with chemical contraceptive)	None	No	\$.10 — \$.75 Each
WITHDRAWAL	18	Psychological effects	No	None
CHEMICAL BARRIERS	20 (aerosol foam considered most effective)	Minor irritation	No	\$1.00 — \$3.50 a month
THE RHYTHM METHOD	24 (use of thermometer greatly increases effectiviveness)	None	Physician may assist in determining ''safe days''	None (unless thermometer and₁ or physician are used)
DOUCHE	31	None	No	\$3.00 — \$5.00

Lubbock ranks in top eight in Texas in VD statistics

By LAYLAN COPELIN

"...You have the good luck to be having a sex life at a time when medical science is able to knock out the venereal disease in rapid order...If you do get a sore or a discharge or the feeling that something is wrong...run to your gynecologist and get fixed up."

(The Sensous Woman, by "J")
Thus claims the recent bestseller. However, public health
officials and rising VD statistics
question how many people are
getting "fixed up."

In fact, 80 per cent of the women and 10 per cent of the men who contact gonorrhea, a kind of VD, show no attention-drawing symptoms, said David Brown, public health investigator in Lubbock

GONORRHEA, commonly called "the clap," "gleet," or "the drip," is caused by a germ called gonococcus. It is rarely a killer, but it is a severe crippler and shortener of life-span. It occurs 10 or more times frequently than syphilis, according to national public health records.

Gonorrhea cases, according to Newsweek, Jan. 24, have increased 100 per cent in this decade, totaling more than 600,000 cases.

There are 25,000 cases of syphilis reported, but for every case of VD (gonorrhea or syphilis) reported, four more go unreported.

During the week of Feb. 21, U.S. Sen. John Tower cited public health records that put Texas "as the third highest reported state case rate for primary and secondary syphilis, more than double the national average." In a compilation of syphilis cases for 160 cities, Tower said Austin and Lubbock were among the top eight. He also said the public records showed Texas with the sixth highest gonorrhea rate.

ACCORDING to Newsweek story, some public health officials cite the root causes of VD as the "three P's—the Pill, promiscuity, and permissiveness." By virtually removing the fear of pregnancy, the Pill has encouraged greater sexual activity. It also has reduced the use of condoms, one barrier to the transmission of the disease.

SYPHILIS is caused by a

spirochete. It thrives on moist environment of mucous membranes lining the genital tract, rectum and mouth, but expires outside the human host.

Often there are no immediate signs of primary syphilis, the first stage of the disease. The first noticeable sign is usually a sore which takes from 10 to 90 days to develop after contact with the infected person.

According to Brown, a sore or blister may be hidden within the body and go unnoticed or the infected person may pass it off as some kind of skin problem.

The secondary stage may also go unnoticed. Symptoms that do appear may start six weeks to six months after the sore (all these figures may have a wider variation).

Lasting from a few days to a few months, the symptoms usually appear as painless rashes or sores on any part of the body—sores in the mouth, persistent sore throats, falling hair in patches, fever or headaches. These symptoms will go away without treatment.

"Many people could go by this stage without realizing it, because syphilis is not that painful," said Brown.

SERIOUS DAMAGE has usually not occurred in the first two stages that last about two years but sometimes up to four or more. These stages are highly infectious.

During this time syphilis can be passed to others through intimate personal contact, though actual intercourse may not have taken place, according to "The Silent Epidemic" by Donald Schroeder.

Untreated, the disease goes into a non-infectious latent stage that causes damage to the body — blindness, heart failure, crippling of limbs, or insanity.

According to Schroeder's article, 80 per cent of syphilis victims may "luck out" and never go into the latent, destructive stage, though researchers do not understand why.

Brown said syphilis is cureable at any stage but any damage done remains.

ANOTHER DANGER of syphilis is congenital syphilis, an infection of the fetus. An infant may show injury at birth or may appear normal at birth, then develop lesions in a few months. The individual may appear normal into adolescence when deformity, blindness, insanity, or early syphilis symptons may strike.

According to public health records, one half or more of all infants born alive to syphilitic mothers will have congenital syphilis in some form.

The usual symptoms of early gonorrhea is a copious pus-like discharge from the genitals that occurs from a few days to three weeks after infection. In men, urination usually becomes painful.

The symptoms will disappear in females without treatment, said Brown, but the victim is usually infectious for many years.

The disease may remain dormant (but sexually infectious) until some time in the future when the germs may extent into the glands, joints or other organs causing arthritis, heart complications, blindness, brain damage, or other chronic conditions such as sterility.

Brown said symptoms of gonorrhea will return in most males if untreated, though about 10 per cent of the infected males never have the symptoms the first time.

STUDENTS contracting VD have three places for treatment: private physician, Tech Health Center, or the Lubbock City-County Health Department at 1202 Jarvis Street. Records of treatment at all three are confidential.

The Lubbock City-County Health Department provides diagnosis and treatment free of charge. The health department and the health center do not report minors treated to their parents.

The blood test is the main method of detecting syphilis, said Brown. In gonorrhea, a sample of the pus-like discharge from the male is used in a smear test.

A sample of the mucous from the vagina is placed in a cultural atmosphere to test females, he said.

The main cure for syphilis and gonorrhea is penicillin. "We use 4.8 million units of penicillin for syphilis, which is four shots taken in two days," said Brown. There are 3 days between the series of shots.

FOR GONORRHEA, males are given 2.4 million units and females receive twice as much because "we usually detect the disease at a later stage in females," he said.

For anyone allergic to penicillin, there are other substitute drugs available.

Physicians are required by law to report any VD cases to the public health department; however, Brown said few do because "they feel it is a breach of confidential information or they doubt the professionalism of the health department."

The Health Department maintains a follow-up program which consists of interviewing the patient to identify his or her sexual contacts. "Most physicians do not have the time to do the follow-up, which would help prevent the spread of the disease," he said.

THERE ARE no laws forcing a contacted person to come to the health department, however by law he can be quarantined until he is diagnosed, Brown said.
