

Students go to polls today to select senators, officers

By TONY BATT
UD Reporter

Another big turnout is expected today in the Student Senate elections and the SA executive runoffs as Tech students go to the polls for the second consecutive week.

Last Wednesday, 3,613 students voted in the SA executive elections, the largest number since the spring of 1971 when only 5,000 students went to the ballots. With the Senate seats and SA executive posts to be voted upon this week, an even larger turnout than last week's is anticipated by election officials.

The polls will open at 8:30 a.m. today in the University Center, the Business Administration Building, the Social Sciences Building, the Civil and

Mechanical Engineering Building and the Law School. All polling places will close at 7 p.m.

One hundred candidates have filed for the 44-senate positions. Fifteen incumbents are running for reelection.

In the runoffs, it appears there is a good chance the office of SA president will not be decided in today's balloting. Three candidates, Bill Allen, Shad Brooks and Keith Williams are still in contention. Brooks, who polled the plurality vote last week with a total of 1,092, garnered only 31 per cent of the total ballot.

Both Williams and Allen, in an incredible coincidence, tallied 946 votes exactly for 27 per cent of the vote. All three candidates expect another runoff

although each one has expressed the hope that this will be the last election.

Anne Moseley and Shannon McWilliams will be running for the post of vice president for internal affairs. Moseley rates as favorite going into the runoff after collecting more votes (1694-48 per cent) than any other executive candidate last week.

The race between Tom Carr and Debbie Lansford for vice president for external affairs is expected to be close. Carr gained the plurality last week with 1,159 ballots, a 41 per cent total. However, Lansford, the only executive candidate who is not a senator, received 33 per cent of the ballot and has staged a strong campaign throughout the elections.

Vote today

These posters are just a few of the many posters displayed around campus promoting the various candidates for Senate and Student Association executive positions. (These are not necessarily endorsements of the University Daily.) Voting boxes will be open from 8:30 a.m. until 7 p.m. at the University Center, Business Administration Building, the Social Sciences Building, Civil and Mechanical Engineering Building and the Law School.

Advisory board may recommend restructuring of UC program system

By GAIL ROBERTSON
UD Reporter

University Center committees and programs always seem to be under attack from the students they are designed to serve.

As a result of this criticism and as a result of dissatisfaction within the committees, the Program Council, composed of the chairman and assistant chairman of each committee, formed another committee in January to restructure the system. If the Advisory Board approves the recommendations, the changes will be implemented as soon as possible, according to Pat Oakerson, assistant director of activities.

Oakerson said some of the recommendations were presented to the board last week, but because of a weak presentation, there seemed to be a lack of communication. She said another presentation will be made soon, probably within the week.

"Right now, I'm not sure about the board's position. I think they will approve the changes, but of course, I can't be sure until it happens," she said.

Money has been a sore spot in center programming this year, said Oakerson. In theory, campus organizations could obtain UC monies for projects if one of the UC committees cosponsored the event. However, Oakerson said this cosponsorship was usually token and amounted in practice to the committee's name being on the program.

Under the proposed revision, Oakerson said more work will go into getting the co-sponsoring committees to really help with the events. "The purpose in the first place was to build stronger relationships between the UC and other campus groups. If the co-sponsorship is only on paper for the purpose of getting additional funds, that purpose is defeated," she said.

Funds set aside for these joint ventures, will also be available to the committees if two or more get together to put on a program. There is a stipulation that money taken from this campuswide account cannot be used for programs in the UC building.

A change in the time schedule used in selection of the committees has also been proposed. In the past, committee chairmen and assistant chairmen have been chosen in the

spring and committee members were not selected until the fall.

The proposal calls for spring selection of committee members so they can begin work during the summer, said Oakerson. A few openings would be available in the fall for transfer and freshmen students, she said. Plans are being made to begin interviews this spring. Oakerson said she does not know what will be done about the interviews if the board does not approve the change.

Plans are also in the making to combine the Art and Design Committee with the Fine Arts Committee under the latter's name. As it is now, Art and Design Committee members are mainly just work horses for the other committees and Fine Arts has a problem of a low budget and competition from Cultural Affairs, according to Oakerson.

The new committee will continue with low-cost cultural events, but will hopefully expand and explore the possibilities of bringing in various kinds of exhibits, said Oakerson. She said she would also like to see this committee develop into an arts and crafts type committee, sponsoring crafts workshops.

Another committee change proposes restructuring the Hospitality Committee into a recreation committee. Oakerson said the new committee would not compete with intramurals, but would offer different kinds of recreation.

"We should be able to make use of the game room in the UC basement and the outing club has offered to help this committee. Some student centers even have camping equipment students can rent. While we're a long way from this, it could be a possibility in the future," said Oakerson.

Bridge and billiards were two forms of recreation Oakerson specifically mentioned as possible areas the new committee might explore.

A personnel change which will probably be different next concerns the executive officers. This year there are three: president, vice president and secretary. The proposal by the program council committee suggests only one executive.

Oakerson appeared confident the changes will be approved, as illustrated by the initiation of the selection of committee members. However, she emphasized that she will not be certain "until it happens."

Med School, engineers plan course on clinical applications of electronics

By JAN McDERMOTT
UD Reporter

Recognizing the fact that it is no longer possible for a doctor to do his work without electrical instruments, the College of Engineering and the School of Medicine are planning a short course in Clinical Applications of Medical Electronics.

The course, scheduled Aug. 24, will be an engineering course for doctors. Enrollment will be limited to 50 participants, and only practicing physicians will be eligible.

DR. WILLIAM M. Portnoy, professor of electrical engineering and biomedical engineering, stressed that "the need for this course established by the medical community." Dr. C. David Campbell, a family practitioner in Corsicana, came to Tech specifically asking for a course to acquaint doctors with electronic developments important in the field of medicine.

Dr. Lee J. Phillips, director of continuing engineering education, said that Dr. Campbell is serving as a consultant in the planning for the course. "He is making sure the course is taught on a level understandable to the doctors," Phillips said.

Teachers for the course will assume the doctors have no previous knowledge of engineering, said Dr. Blair A. Rowley, associate professor of biomedical

engineering and electrical engineering. The intent of the course will be to acquaint the doctors with the basics of medical electronics rather than to make them experts in the field.

The course will begin with an explanation of basic principles and terminology of electronics. Next, applications of electronics to the practice of medicine will be discussed. The third segment of the course will be devoted to electrical hazards in medicine. Finally, advanced technology and future possibilities will be explored.

THE MATERIAL WHICH will be covered in the short course is not currently taught in medical schools, Dr. Rowley said. Approximately 10 to 20 per cent of the schools cover the electrical hazards, but otherwise the field of biomedical engineering is ignored in medical curriculum, he said.

Dr. Rowley further explained that medicine is taught as an art. Techniques are passed from one physician to the next. There is a resultant reluctance to accept new things which has caused a five to ten-year lag in the application of electronic advances.

Electronic advances have come rapidly over the last ten years, Rowley said, and doctors have just not been able to keep pace with it. The short course is acceptable for 24 hours of prescribed credit by the American Academy of

Family Physicians. The academy requires physicians to complete 150 hours of prescribed and elective credit each two years, said Dr. Orene W. Peddicord, coordinator of continuing medical education.

This is probably the first time that such an engineering course has been offered for doctors, Dr. Phillips said. The unique thing that Tech offers is a college of engineering and a medical school in the same geographical location, he said. Usually the only person available to talk to a doctor about electronic equipment is a salesman, but this course will take an objective approach. The people from the engineering department have taken the time to learn enough about the medical profession to interact with the doctors to provide a service to the medical community, Phillips said.

INFORMATION ON the course has been sent out to 5,000 physicians in Texas, New Mexico, Oklahoma, Arkansas and Louisiana. Dr. Phillips expects to have a waiting list of people interested in taking the course. Since only 50 doctors will be able to participate, it is likely the course will be offered regularly in the future if it is successful.

Teachers for the short course will be Dr. Portnoy, Dr. Rowley, Dr. Darrell L. Vines, associate professor of electrical engineering, and Lex A. Akers, instructor of engineering technology.

Convention gives governor power to fire appointees

AUSTIN (AP) — After two days of turbulent arguments, the Constitutional Convention agreed Tuesday to let Texas governors fire appointed state officials, if a majority of the Senate agrees.

The provision of the proposed new constitution will be a powerful new addition to the powers of the state's chief executives, if finally approved by Texas voters.

TENSION RAN STRONG, throughout the heated arguments and close votes.

Twice Tuesday Speaker Price Daniel Jr. stopped proceedings and lectured delegates about burst of hissing, apparently from those who oppose strong powers for the governor.

"Those who engage in hissing are not becoming in the eyes of those in Texas who are closely watching this convention," Daniel said.

Time and time again, Daniel warned legislator-delegates to stay in their seats and to not vote any delegate's machine except their own.

The controversial removal provision, as amended and accepted by the convention reads:

"The governor shall have authority to remove for cause all officers who were appointed by any governor and who were confirmed by the Senate. Prior to removal, the governor shall provide the Senate a proposal of removal containing the cause for the recommended action. The Senate may refuse the removal by vote of a majority of the membership within 30 days of submission."

EFFORTS TO CHANGE the removal provision generally were defeated except for one compromise that allowed a majority of the Senate, instead of two-thirds, to refuse a governor's request.

"You are just setting it up so some Republican governor can come in and with the help of 11 state senators could clean house of all those who opposed him in the election," said Sen. H. J. Blanchard, D-Lubbock, in opposition.

"The removal power is new and will have a great effect in the future of state government," Rep. Joe Wyatt Jr., D-Bloomington, said.

Others claimed it would allow new governors to remove agency heads appointed by previous governors who might be obstructionists to the new governor's administration.

THE HOTTEST DEBATE Tuesday afternoon became an amendment by Rep. Jim Nugent, D-Kerrville, that would have gubernatorial appointments

considered by the legislature as a whole, not just the Senate.

The delegates at first refused 66-94 to kill Nugent's plan then had second thoughts and then voted against it 85-75.

Another Nugent amendment proposed that if a governor did not fill any vacant appointment within 180 days, the choice of an appointee would go to the lieutenant governor.

"This will stop governors from sitting on appoints," Nugent said. The amendment failed by a wide margin.

THE CONVENTION VOTED 88-67 to table an amendment by Rep. Bob Davis, R-Dallas, that would require a person to be a qualified voter and to have never been convicted of a felony, unless pardoned, to be eligible to be governor.

"If a man has paid his debt to society, if a woman has paid her debt to society, why shouldn't they be able to run?" asked Rep. Nick Nichols, D-Houston.

Davis said he thought only people with exemplary characters should be able to be governor.

Rep. Jim Kaster, D-El Paso, said Davis' amendment would keep a man who could run for president from running for governor.

The convention added the lieutenant governor, who is now paid the same as senators and representatives, to the list of executive department officials and specified his salary would be that set by the legislature.

AN EFFORT TO limit any increase in pay for executive branch officials is the prevailing national cost of living average failed 143-12.

Also tabled was an amendment that would have removed the 30-day limit for a special legislative session called by the governor.

The convention recessed until 9:30 a.m. today.

Rep. Blanchard criticizes wasteful burning of gas

By SANDY MARTIN
UD Reporter

While the federal Energy Office in Washington studies what Sen. H. J. "Doc" Blanchard terms a "critical situation," plants throughout West Texas are reportedly flaring (burning) precious gallons of liquefied petroleum gas (LPG).

Although federal regulations have limited the sale of LPG, continued production has caused supplies to back up in storage facilities throughout the state. Companies unable to distribute their fuel are faced with either stopping production or burning the excess fuel into the atmosphere through flaring, Blanchard said.

Sen. Blanchard, concerned with the "wasteful burning of fuel that Texans need now," contacted Gov. Dolph Briscoe early last week in Washington, D.C. Briscoe took the problem to the Federal Energy Office, and is now awaiting a decision.

Blanchard said, "Right now Washington is calling wholesalers, retailers and producers to see exactly what the situation is. We're hoping that in the next few days the federal regulations can be changed and we can get some of

this fuel to consumers."

Propane and butane, the components of LPG, are used extensively throughout the state. Blanchard said Texans could use the fuel right now to run irrigation pumps.

Blanchard said almost all LPG plants are currently at capacity or near capacity storage levels. Dealers have estimated that there will be 900 million barrels of liquefied petroleum gas in storage before summer.

Several companies contacted by the University Daily refused to comment on their storage and production of fuel. Blanchard said the companies "have not called me up to say they're glad we've pointed out the problem."

When asked if a lack of storage facilities was a major cause of the problem, Blanchard said no. "All throughout history we've had an open market and there has always been plenty of storage space. Federal regulations have fouled up the whole program."

Blanchard said he is wanting action within the next few days, but he is not too optimistic. "Once a federal regulation is set up, it's hell to get it changed," he said.

Editorial

...Another opportunity

The much maligned Texas Tech Student Senate must today face another election year, another opportunity to inject fresh ideas and progressive programs — another opportunity, but little likelihood of action.

So why even vote?

Perhaps the motivation in voting in student elections — especially student senate elections — lies in the opportunities a strong student government provides and not past trade records. Opportunities to effect strong student input in all areas of the University — not just in the area of innocuous student affairs, but in areas student input has traditionally been slighted ... academics (more than mere teacher evaluation), student life (more than residence halls meetings, foosball tables for dorms and king-size Cokes), and student monies (more than financing of student rodeos, and appreciation banquets for student leaders).

There's more, much more to student government than has presently been accomplished or is likely to be accomplished in any short lifetime. Lack of accomplishment cannot wholly be blamed on the efforts or lack of effort on the part of the senate — the blame lies squarely on the shoulders of Texas Tech; its administrators, its Regents, and portions of its faculty.

Attempts by students and student government to seek a greater voice in the spending of millions in student fees has met stiff resistance in the past as encroachments on the pious powers of the Tech administration. As a result, hundreds of thousands of dollars are squandered on "student services" that students have little or no say-so in.

We're here to pay our money, not to take part in its allocation.

Attempts by students and student government to secure a voice in the hiring, retention and tenure of faculty has met with resounding opposition from the Tech faculty. As a result, students receive, at most, only token representation on faculty councils curriculum committees, and tenure review committees.

We're here to receive an education, not to take part in it.

Attempts by students and student government to propose meaningful change in policies that affect the daily lives of students has met with deaf ears, intolerable detachment and arbitrary reaction from the Tech Board of Regents — past and present.

We're here to follow rules, not change them.

So why even vote?

The beginning of effective student government is in its support from the student body — support exhibited in votes. Votes are by no means a measure of good government — after all, Richard Nixon received millions. But, votes provide a power base from which to build or stagnate. Texas Tech can ill afford another stagnant year in attempts by student government to secure a voice in University affairs — a voice for you.

Up until now, it was easy for the administrators, the regents and the faculty to ignore that voice — a voice too weak to effect change. When that voice gains strength it will no longer be so easy to ignore. A sleeping lamb alarms no one, but only a fool ignores a roaring lion.

'HER MAJESTY IS OUT OF THE COUNTRY—WHICH MAKES HER SMARTER THAN EITHER OF US!

WASHINGTON merry-go-round

by Jack Anderson

Nixon scrutinized 1970 tax return

WASHINGTON — President Nixon checked over his controversial 1969 tax return, page by page, before signing it on April 10, 1970.

The event was witnessed by his personal lawyer, Herbert Kalmbach, and his tax lawyer, Frank DeMarco, who also carefully explained the tax figures to him.

Their testimony could determine whether the President was a party to claiming a \$576,000 tax deduction after the legal deadline had passed. The claim was based upon a back-dated deed, which granted to the government one-third of his vice presidential papers.

Tax authorities have told us that the backdating of the document appears to be fraudulent and could lay the President open to charges of income tax evasion.

White House spokesmen have insisted that the President left the preparation of his tax returns to his lawyers and that he was too preoccupied with the presidency to bother about the details.

This has been disputed, however, by the statements and documents DeMarco has given to the Joint Congressional Committee on Internal Revenue Taxation, which is investigating the President's tax liabilities at his invitation.

The documents show that the President took a personal interest in taking every possible tax deduction. For example, a June 16, 1969, memo from his aide and confidante, John Ehrlichman, states:

"The President holds the view that a public man does very little of a personal nature. Virtually all of his entertainment and activity is related to his 'business.' He wants to be sure that his business deductions include all allowable items. For instance, wedding gifts to Congressmen's daughters, flowers at funerals, etc..."

Even more damning were DeMarco's confessions behind closed doors to the committee staff. As he recounted the crucial April 10, 1970, meeting with the president, the two attorneys spent about 30 minutes explaining the tax return to the President. He carefully checked each page before signing the return.

Then DeMarco and Kalmbach proceeded upstairs to the White House living quarters and explained the tax return to Mrs. Nixon, who added her signature. She served them coffee and cookies.

DeMarco would not relate the substance of his discussion with the President about taxes, claiming attorney-client privilege. This leaves up in the air whether DeMarco told the President that the \$576,000 deduction was based upon a back-dated deed.

But significantly, DeMarco admitted he had notarized the deed at the White House when he came to discuss the tax

return with the President on April 10, 1970. The notarization falsely stated the deed had been signed in California a year earlier.

The two crack lawyers whom Nixon has called in to handle his tax problems, H. Chapman Rose of Cleveland and Kenneth Gemmill of Philadelphia, have made anxious inquiries about the April 10 meeting in the oval office. They have expressed concern that DeMarco or Kalmbach might testify about what was said.

Committee sources have told us there are no tapes of this important meeting, because the automatic tape system hadn't yet been installed. The sources also say that notes and memos dealing with the President's conversations with DeMarco and Kalmbach have been held up by the White House as "privileged communications" between a client and his attorneys.

This is disputed by White House press secretary Gerald Warren who told us no information has been withheld. "We are fully cooperating with the joint committee," he said. "Information has been supplied as soon as it could be put together."

Sen. Russell Long, D-La., the committee chairman, has dismissed the possibility of presidential tax fraud, calling the controversy over Nixon's taxes an "honest difference of opinion."

But Long, whose father was hounded by investigators, has always championed people under investigation. He led the fight, for example, against the censure of the late Sen. Thomas Dodd, D-Conn. The Senate, nevertheless, voted to censure him by a 94-to-5 vote.

More ominous for the President is the attitude of Rep. Wilbur Mills, D-Ark., the former chairman, who started the investigation. After studying the preliminary findings, he offered to introduce legislation granting the President immunity from prosecution if he would resign. The offer implied that prosecution is a possibility.

We have also learned that the Internal Revenue Service has assigned the case to its intelligence section. These are the people who usually investigate criminal tax fraud.

It may also be significant that the President's lawyers are arguing the President cannot be impeached for a crime unless it is committed in his "governmental capacity." Since tax evasion is strictly a private crime unrelated to the President's "governmental capacity," the lawyers might be anticipating tax charges against Nixon.

It should be stressed, of course, that no charges have been made and that the President like everyone else must be presumed innocent until proven otherwise. But developments are rapidly closing in on Richard Nixon.

Migrant farm workers face problems getting enough fuel

WASHINGTON (AP) — The journey of migrant field workers that begins each spring in South Texas and ends in the fields and orchards of Northern states is threatened this year by

\$100 scholarship offered to Tech female athlete

The first scholarship available to a female varsity athlete at Tech is being offered by the Forum chapter of Mortar Board. Applications for the \$100 scholarship are available for any freshman, sophomore or junior woman who has participated in at least one intercollegiate sport and has a minimum GPA of 2.75. Other than that, there are no firm requirements, said Kathy Head, chairperson of Mortar Board's Scholarship Committee. The recipient will probably be chosen on the basis of leadership and scholarship, she said. The scholarship recipient will have to be someone who has made a contribution to women's athletics, said Head. She added that any member of a women's team has made a contribution just by the fact of making the effort to be on the team. "There are so many outstanding female athletes on campus. It is sad none have been recognized," she said. Applications for the scholarship, which is for the academic year of 1974-75, are available from women's athletic coaches or in room 242 West Hall. The deadline is March 20.

Filmwriting course slated

Tech's mass communications department is planning to offer a four-week summer workshop in filmwriting June 3-28. Vera Culwell, a screenplay and teleplay writer for the Universal Studios, Universal City, Calif., will teach the course. She is a 1944 journalism graduate of Tech. Students completing the course will receive six hours of elective credit. A student may register as an undergraduate, graduate or for non-credit. Workshop costs will include the regular summer tuition for six hours credit and any necessary fees. Only 25 students will be accepted for the short

the energy crisis, a South Texas congressman says. Rep. Kika de la Garza, a Democrat, said Monday that he is worried the workers and their families will have to remain in South Texas if there are no guarantees of sufficient fuel. "They'll have to stay in our area, and our area doesn't have the jobs for everyone there," he said in an interview. "They'll have to rely on governmental services for their subsistence, and that will be a great social problem in the area." He said "upward of 100,000 persons," all U.S. citizens or legal residents, would be affected, and he is asking the Federal Energy Office to step in.

Also affected would be farmers along the migrants' route and the population depending on them to harvest their food. "They have nobody else to pick the food and do the work," de la Garza said. "That's why they hire people from our area."

He said some men may be able to find work in South Texas. However, most migrants travel with their families, and the children and wives who would join the field work would be unable to find local jobs, reducing the family's income.

The course will deal with the form and technique of screenplay and teleplay. Culwell will cover how the script will be used by the interpreters, the director, cameraman and actors and how to market the final product. The classroom study will include the viewing of specific films and selected scenes and their written counterparts. Students will be required to write a film story and individual scenes dealing with specific problems of adaptation. Censorship, budget, trends, guilds and unions, industry limitations and requirements will also be discussed during the four-week period.

Dr. Ayoub explained that the reasons for these fatalities are not completely understood because the actual punishment that takes place in a tackle cannot be accurately measured. He also said that there are now no standards set for football helmets. The standards used in these tests were the ones used for auto crash helmets. These are the ones manufacturers also use. The five basic helmet types — sling suspension, sling suspension with padding, fully padded, styrofoam and hydraulic system — were placed on a guillotine-like frame and dropped onto a patch of artificial turf at various speeds. The tests showed that all but the styrofoam helmet offered

adequate protection when the force was centered on the crown of the head. Blows that would come to the side of the head were protected by the sling with padding and fully padded types. When dropped on the front, only the fully padded offered adequate protection. Tech uses the basic sling suspension helmet because it is the easiest to fit. A good fit is one of the most important factors in determining good protection. Helmets like the sling suspension with padding and the fully padded are often hard to fit and may cause more damage by slipping when hit by a strong force. Ayoub pointed out that though the tests were not representative of all conditions of play, the helmets could only be tested in controlled situations in the laboratory to get some idea of the amount of protection that each might offer.

IRS fears drop in tax revenues

WASHINGTON (AP) — Although reluctant to acknowledge it publicly, officials of the Internal Revenue Service are concerned about taxpayer reaction to the controversy over President Nixon's income taxes. Political observers and outside tax experts warn of a possible taxpayer reaction that could lead to a reduction in anticipated government revenues in 1974. One former IRS Commissioner, Johnnie M. Walters, has said that a loss of \$1 billion would not be unrealistic. Rep. Charles Vanik, an Ohio Democrat on the tax-writing

House Ways and Means Committee, said revenues might be cut by as much as 10 per cent, or about \$25 billion. Vanik said he found in extensive contacts with constituents that "the voluntary income tax system . . . is now being threatened to the peril point by the moral indifference of the President to his own tax obligations and his position as a national leader."

Study of football helmets may help reduce fatalities

By ANN SANDERS
UD Staff

A 3,000-pound automobile runs into a solid wall traveling at eight miles per hour. That is a force of 200 Gs — or the average amount of force exerted when two football players tackle headon.

The industrial engineering department, concerned with the number of fatalities from this type of contact, recently completed a study on the basic types of helmets and the protection they offer. The study was made by Col. Thomas Rogers for a graduate dissertation under Dr. Mohamed Ayoub.

Rogers compiled statistics and test results on the five basic types of football helmets and football fatalities. He found that in 1961, 11 out of every 100,000 football players died from injuries. Nine of these players were on the college-professional level. By 1971, the number had been reduced to six injuries out of every 100,000, with four of these fatalities on the college-professional level.

Dr. Ayoub explained that the reasons for these fatalities are not completely understood because the actual punishment that takes place in a tackle cannot be accurately measured. He also said that there are now no standards set for football helmets. The standards used in these tests were the ones used for auto crash helmets. These are the ones manufacturers also use.

The five basic helmet types — sling suspension, sling suspension with padding, fully padded, styrofoam and hydraulic system — were placed on a guillotine-like frame and dropped onto a patch of artificial turf at various speeds. The tests showed that all but the styrofoam helmet offered

adequate protection when the force was centered on the crown of the head. Blows that would come to the side of the head were protected by the sling with padding and fully padded types. When dropped on the front, only the fully padded offered adequate protection. Tech uses the basic sling suspension helmet because it is the easiest to fit. A good fit is one of the most important factors in determining good

protection. Helmets like the sling suspension with padding and the fully padded are often hard to fit and may cause more damage by slipping when hit by a strong force. Ayoub pointed out that though the tests were not representative of all conditions of play, the helmets could only be tested in controlled situations in the laboratory to get some idea of the amount of protection that each might offer.

Economist to lecture on Common Market

Dr. Walter Krause, adjunct professor of economics at Tech, will lecture at 4:30 p.m. today on international economics and its influence on the U.S. economy. The lecture on "The Crisis in the Common Market" will be held in the BA Lecture Hall 01. The speech is open to the public free of charge.

According to Krause, developments in international monetary matters, the energy situation and participation by Great Britain in the European Common Market will have long-range effects on the U.S. economy. Krause will look at the economy through the international situation and

examine the importance of U.S. European relations in the future. Krause is currently visiting the Tech campus where he will remain through March 15. He will lecture to economics classes and also to special groups. Krause specializes in the study of international economics and is particularly interested in the economies of underdeveloped nations. The professor has served with the U.S. Department of State in the Philippines and in Washington, D.C. He was appointed John F. Murray Professor of Economics at the University of Iowa in 1968.

Varsity cheerleader tryouts are scheduled for April 6. All interested individuals should come by room 102 of the Journalism Building to sign up prior to April 6.

Cheerleader tryouts set

Varsity cheerleader tryouts are scheduled for April 6. All interested individuals should come by room 102 of the Journalism Building to sign up prior to April 6.

Even that could cause a significant cutback in anticipated revenues, IRS observers say, although nobody is prepared at this early stage to predict how much. Voicing an opinion that apparently is shared by many high IRS officials, John J. Olszewski, chief of the intelligence division that investigates tax frauds, said the American taxpayers "are going to be either honest or dishonest, depending on their own moral standards, but not because somebody else sup-

posedly set an example for them." H. & R. Block, the Kansas City-based firm that claims to be the nation's largest private tax preparation firm, having handled 8.4 million tax returns last year, says its view of the situation generally coincides with that of the IRS. This means an upsurge of interest in finding legal deductions, which taxpayers in the past might have been willing to ignore, but none in trying to defraud the government or avoid taxes.

Hammerick different breed of cat on tennis court

By KIRK DOOLEY
Sports Writer

The reason why Butch Hammerick, Tech's top-seeded tennis player, came to Tech instead of any other major school is the strangest one on record. "I've always wanted to see a tornado and Lubbock has 'em so that's why I'm at Tech."

Now that he is here, Butch is likely to start some of his own tornados. Last weekend his latest triumph was over the Big Eight's top seeded player and "small" wins like that are the reason why Butch is the most promising sports figure that Tech has to offer this spring.

Although he tells most people that he is from Juarez, he is really from El Paso where he graduated from Burgess High. He played strictly doubles so he and his partner lost the district title three straight years in a row. Last year, playing for Tech with a sore shoulder against several All-Americans, Butch reached the SWC quarterfinals in singles.

Many of his opponents seem to be intimidated by his pre-game antics. For good luck he stuffs himself with waffles and when he puts on his tennis gear he waits until the last possible moment before he puts on his shorts. Then, armed only with his racket and a wry smile he enters the court. His opponents look at him with frightened expressions and their sense of mental control is lost. After the match they still don't know what to make of him.

"After each match," says Butch, "We usually go out and relax by drinking some cold training water." Sometimes he will be seen after a match shooting some baskets at the SAE lodge with a few of his brothers.

Actually an all-round athlete,

Butch gave up football, basketball and swimming to play tennis. He wanted to run track but confesses he is too slow. But a new sport has entered the picture: snow skiing.

"We usually play tennis 11 months out of the year so I haven't been able to ski as much as I'd like to. I would consider myself more of a 'mad bomber' than a great skier, but I still love it."

Butch continued, "As a matter of fact, if I don't get into dental school I might join the Peace Corps just to get in some good skiing in Europe and the Alps."

The tennis team works out from 2:30-5:30 p.m. every day and Butch concentrates on improving his forehand. He already possesses a deadly backhand, among other things. His favorite pastimes, besides tennis, are fast cars and faster women.

What occupies his time? "I screw around a lot," says Butch.

What else? "I study some and dream of sexual fantasies."

Lubbock's tennis star is now contemplating his future. If he doesn't make it in dental school and if the Peace Corps already has enough international ski bums, then Butch will stay here and attend graduate school while helping coach the Tech tennis team. This summer his

plans include giving tennis lessons and chasing women in Amarillo and Lubbock.

Possibly the most unusual trait Butch has is that while playing tennis he concentrates on food. Not any food, but "the perfect dinner" as he refers to it.

I've got it down except for the dessert. I imagine a marinated Kansas City strip, medium rare; one tail of South African lobster in steaming butter; an ear of corn on the cob; and one glass of cold training water....straight.

"Dessert will be some kind of cream pie. While I'm playing I'll see a blonde and think banana cream pie. Next tournament I'll probably decide on dessert."

While Butch Hammerick isn't considered your normal athlete, he gains your respect by getting exactly what he goes after, both on the tennis court and off.

Top-seed

Walter (Butch) Hammerick is Tech's top seeded netter this year. Hammerick gives his views on everything from the Peace Corps to banana cream pie in the story at left.

Netters knock off Midwestern

By JEFF KLOTZMAN
Asst. Sports Editor

Tech's Red Raider netters upped their season match play record to 6-4 Tuesday, defeating Midwestern University 8-1 at the Tech varsity courts.

Tech was without the services of top-seed Walter 'Butch' Hammerick in the meet. Hammerick injured his shoulder against New Mexico State's Armando Riveria Saturday and coach George Philbrick gave him the afternoon off to give the injury time to heal.

As it turned out, the Raiders were not hampered by Hammerick's absence. In the singles competition, regular second-seed Terry Bennett easily handled Midwestern's top seed Robert Gamboa 6-1, 6-1. Tech's John Moffett blitzed Terry Book, 6-0, 6-0 while Sid Clemets handled Mark Gentry, 6-2, 6-1. Raider Pat Nye clobbered Steve Schappa, 6-0, 6-2 and John Rowley knocked off Tom Sturgis 6-1, 6-2.

Tech's netters will be on the road this weekend as they compete in the West Texas State University Invitational in Canyon. Tech faces Southwestern Louisiana in the first round of play at 9 a.m. Friday.

Other teams entered in the tournament are Wichita State, Oral Roberts, Central State, Amarillo College and Oklahoma State and host West Texas State.

petition as Midwestern's Randy Stewart edged Stan Morris 6-1, 3-6, 6-3.

In doubles play Tech's Bennett and Morris teed off on Stewart and Gamboa, 6-2, 6-2. Moffett and Don Adams easily defeated Book and Gentry, 6-1, 6-2, and Nye and Rowley handled Schappa and Sturgis 6-1, 6-1.

Bruins replace Irish

By The Associated Press
UCLA, which wrapped up the Pacific-8 conference title with an 82-52 triumph over Southern California last week, leaptfrogged over Notre Dame into second place behind North Carolina State in the weekly Associated Press college basketball poll released Tuesday.

UCLA, the defending national champion with a 23-3 record through games of Saturday, will meet 20th-ranked Dayton in the NCAA's West regional semifinals Thursday night.

Dayton, 20-7, replaced NCAA Midwest host Oral Roberts in the poll after handing Notre Dame its second loss of the season, a 97-82 upset.

North Carolina State, which

will seek to preserve its unbeaten record — best of the ranked teams — against No. 5 Providence in the NCAA East semifinals, received 24 first place votes and 792 points from a panel of sports writers and broadcasters.

UCLA, with three losses for the season, received 17 first place votes and 748 points while the Irish amassed 652 points for third place.

Maryland remained fourth in the poll despite its 103-100 loss to N.C. State in the Atlantic Coast Conference championship tournament Saturday night. The loss ended the Terps' NCAA playoff hopes and their season at 23-5 since they declined a bid to the National Invitation Tournament.

Providence, eighth a week ago, improved its ranking with triumphs over Brown and Penn and losses by Vanderbilt, North Carolina and Southern Cal. The three teams had been fifth, sixth and seventh a week ago.

Vanderbilt will take its No. 6 ranking against No. 8 Marquette in the Midwest Regional semifinals while seventh-ranked North Carolina will face Purdue in the second game of the NIT tournament at Madison Square Garden Saturday.

Through games of Saturday, Vanderbilt is 23-3, Marquette 23-4 and North Carolina 22-5.

Long Beach State, which already completed its season at 23-2, remained ninth, but Indiana, which edged Purdue 80-79, moved up from 13th to 10th.

Kuhn disapproves Braves' plan

NEW YORK (AP) — Baseball Commissioner Bowie Kuhn said Monday he disapproves of the Atlanta Braves' plan not to start Hank Aaron in the season-opening series at Cincinnati and expects the veteran slugger to be in the line-up on opening day chasing Babe Ruth's home run record.

Kuhn said he expects the Braves to use Aaron in the opening three-game series April 4-6-7 "in accordance with the pattern of his use in 1973, when he started approximately every two of three Braves' games."

Kuhn's announcement put a damper on Atlanta owner Bill Bartholomay's expressed desire to have the 40-year-old Aaron break Ruth's record of 714 career home runs at home. The Braves begin an 11-game home stand on April 8.

Aaron finished the 1973 with 713 career homers.

Last season, Aaron started two of three games in the Braves' opening series with Houston. He appeared in 120 games, some of them as a pinch hitter, and batted .301 with 40 homers and 96 runs batted in.

"I have had a number of discussions with Bill Bartholomay about his February

announcement regarding Henry Aaron," Kuhn said. "Although he has advanced some substantial arguments in support of his announcement, he has not been able to persuade me that the procedure he wishes to

follow is good for baseball.

"As a result, I have advised him that I am disapproving the announcement and that, barring disability, I will expect the Braves to use him in the opening series in Cincinnati..."

Weeks captures title

By MARY ROSE HUTYRA
Sports Writer

Weeks No. 1 defeated the Wallbangers, 33-27, Monday to capture the All-University championship in six-man basketball.

Tena Pearson of Weeks and Jan Kincaid of the Wallbangers were leading scorers in the game with 14 points each. Sheri Vandeventer added 7 points to the Weeks score and Judith Murrill scored 10 points for the Wallbangers.

Other members of the Weeks team include Kathy Fisher, Cheryl McCloy, Georgia Ray, Kathleen Lynch, and Tanya Chester.

Horn Hall won first place in the five-man division Sunday by defeating Pi Beta Phi, 24-12.

Kathy Burttschell of Horn was the leading scorer for her team with 12 points. Cathy Singley netted all 12 points for Pi Phi.

Members of the Horn team are Sandy Cox, Dina Madrid, Kit Kveton, Linda Keahey, Carol Grimes, Michelle Hill, and Sue Perishe.

Both Co-Rec and women's softball competition are in progress. Officials are needed for women's softball and interested persons may call the Women's Gym for further information.

Track, paddleball, and little "500" bicycle races competition will begin soon. Entries for track and paddleball are closed but entries will be accepted for the bicycle races until next Wednesday.

Artist plans 'informance' series

Theresa Tredway-Carroll, mezzo-soprano affiliate artist at Tech, will make seven appearances, each called an "informance" on the Tech campus during her premiere stay at Tech. An informance is described as a performance that is both informal and informative.

Carroll's contract requires that she spend a total of eight weeks of the current year on the Tech campus and in the surrounding area.

All of her performances on campus will be in classes, with the exception of a 1 p.m. performance next Wednesday in the TV lounge of the University Center.

The Tech Music Department is hosting a reception in Carroll's honor Sunday in the

Tech Museum. She will give a preview performance at the 5:30 p.m. reception.

Carroll's appointment as affiliate artist at Tech is sponsored by the Sears-Roebuck Foundation and the National Endowment for the Arts through Affiliate Artists, Inc.

Affiliate artists perform in concert and before civic groups, as well as in such informal settings as classrooms, churches, libraries, factories, shopping centers, hospitals, prisons or retirement homes.

The purpose of the program is to extend the public appreciation for the live performing arts while providing professional career opportunities to performers in the middle stages of their artistic development.

Tredway-Carroll

On-job programs offer experience to Tech home management students

By MELISSA GRIGGS
UD Staff

On-the-job programs in commercial home management offer students a chance to apply course-related learning and increase professional development.

According to Dr. Jane Coulter, assistant professor of Home and Family Life, 13 girls participated in a six-week practical program last summer for the Association of Texas Rural Electric Cooperatives Incorporated in conjunction with the College of Home Economics. Stationed in area towns such as Hereford and Stanford, each girl conducted a survey of the amount of rural usage of electricity and electric products.

Each girl interviewed from 100 to 300 families in rural homes surrounding the towns. After the interviews, they tabulated the data and drew conclusions as to the amount of energy consumed. The girls tried to tie the results in with such personal factors as income level and educational level of the families. They also helped the families with problems related to household appliances. The girls received three hours of credit for Home Management

411, Problems in Home Management.

Ann Marshall, home management major is learning to manage the "big House" by participating in a practical program at the Lubbock Inn. She is learning food service, cleaning, laundry and care of furniture and furnishings in the rooms.

Marshall is conducting a time and motions study for work simplifications for the employees and time management work routines. She is working on a training manual with tips for employees for Lubbock Inn. Marshall works two hours a week for two semesters and will receive three hours credit.

The students are working for Litton Industries to demonstrate microwave ovens to consumers and salesmen. They also deal with major consumer complaints.

On the graduate level, Mrs. Gail House, working on her home managements masters degree, will work in the office of the Attorney General this summer. She will assist on the code of consumer complaints in the regional office under John Richards.

On-the-job home management students work under the

supervision of the employer and faculty, said Dr. Coulter. They have conferences every two weeks with faculty members. At the completion of their program, the students are evaluated by the faculty, the job supervisor and by themselves. Home management majors interested in participation in job programs should contact Dr. Coulter for information and application forms.

"I feel we will continue to expand the programs because there are numerous possibilities for executive housekeeping," said Dr. Coulter. "We also hope to expand the programs of dealing with the equipment problems of homemakers. A possible focus could be on energy conservation and students could teach the homemakers how to conserve energy in their appliance use."

'Deceivers' ordered to return gains

WASHINGTON (AP) — The Federal Trade Commission's time-honored method for dealing with deceptive practices has been to let the violators off with a promise to go and sin no more.

But a promise isn't enough any more. Now the commission is ordering violators to return tainted gains on purchases as varied as motorcycle helmets and homesites.

As Mayo J. Thompson, the commissioner from Texas, puts it: "I don't see how you can stop rustling if you let the rustler

keep the cows."

An example of the charge, now in full bloom despite a pending court challenge, is the commission's dealings with pyramid marketing schemes.

The pyramid is usually set up to distribute an everyday consumer product. Participants pay a few thousand dollars to enter the distribution chain. The person who signs up a new recruit gets part of the entry fee, and the organizer gets the rest.

The commission has found that the organizer and anyone lucky enough to sign up a stable

of recruits are rewarded handsomely, very few products are sold and the folks at the bottom of the pyramid wind up wiser but poorer.

In 1970, the commission complained that Bestline Products Corp. of San Jose, Calif., had set up a pyramid to sell cleaning products, charging \$3,700 for the second level of distributors.

Bestline signed a promise not to use deceptive techniques in recruiting distributors, and the FTC let it go at that. But last year the commission complained in court that Bestline hadn't kept its promise. The court is considering the FTC's request for nearly \$500,000 in fines.

In 1971, the commission filed similar pyramid complaints

against Holiday Magic and Koscot Interplanetary, two cosmetic distribution plans. Now, the commission staff is asking that the companies be required to refund participants' money.

"In each case the staff is taking a look at the facts to see if restitution is justified," said J. Thomas Rosch, head of the commission's consumer protection bureau.

"There's a great deal of staff effort now being placed in the area of restitution," said Commission Chairman Lewis A. Engman.

Federal grants available

The Basic Educational Opportunity Grant Program, a federal aid plan for first-year college students, is still available for the rest of the spring semester. First-year students who wish to apply for the aid must get an application from the Financial Aid Office in West Hall by April 1.

The grant may pay a maximum of \$1,400 minus the amount the family is expected to contribute to the cost. Grants average about \$260 per student and pay any type of tuition, fees, housing, foods or miscellaneous expenses.

Students who apply for the grant will receive notice of their eligibility within one or two weeks. They should then take this notice to the Financial Aids Office where the actual amount of the grant will be determined.

Beginning in the fall of 1974, second-year students will also be eligible for the grants. Students who wish to apply may pick up application forms in the Financial Aids Office sometime in mid-April.

Basic Grants is the Federal government's newest program of student financial assistance, begun this year. The amount of the grant is determined by family contribution, amount of funds available and the cost of the student's education. The amount of the grant decreases as the family contribution increases.

'Luther' dynamic cinema, exciting historical drama

LUTHER, the sixth offering of Ely Landau's American Film Theatre, follows the life of religious revolutionist Martin Luther during a time span of over 20 years: from 1506-1533 specifically. Based on John Osborne's prize winning play, the two hour film shows Luther's indoctrination into the house of "monkery," his emergence as a reformer through his sermons exposing the sham of Indulgences, his denial of papal authority and his ultimate "betrayal" of the masses who chose to follow him. Though the influence of the stage is indicative in many segments, "Luther" nevertheless succeeds as dynamic cinema ... primarily through the performance of Stacy Keach in the title role.

Much of the delicious wit and sarcasm of Osborne's stageplay is retained, serving not only as comic inclusions but as steps toward the gradual discovery of what actually made Luther "tick." Keach has a delivery all his own, too: a grugling or groping for words during monologues and conversations that is all too human, all too believable. He questions the value of becoming a monk, finally uttering in desperation "All we learn is how to die." After being transferred to Wittenberg, he recognizes the fact that Rome is bleeding Germany dry. He sees the sale of Indulgences and the display of "holy relics" as being commercial, not Christian. And Keach illustrates that he is very much aware of the possible effects of his upcoming actions when he says

"If I break wind in Wittenberg, they might smell it in Rome." (They do.)

Indeed, the picture as a whole would have been a dismal flop had not Keach been able to bare Luther's soul, so to speak ... to actually expose the reason behind the man's actions. And what a thorough personality expose is offered! We see the painful family relationship, the physical results of his holding his frustrations inside and the conflicts that constantly rage within his own mind. More than one person accuses Luther of hating himself. And at certain points of the film, the line "I am alone and against myself" seems made to order for the title character. All of the above intricate factors in understanding a man who not only defied the authority of Pope Leo X but, when the resulting mob began to take up arms, also recommended the slaughter of his followers to the German princes ... who wasted no time in following through with his suggestion.

Director Guy Green has drawn excellent performances from his crew, and also knows very well how to increase tension through closeups and Dolly-back shots. He makes able use of the sets and, even though the scenes in which he attempts to contrast the riches of the Church with the poverty of its believers are extremely obvious, they nevertheless make their point. His only controversial technique is the manner in which he has his actors walk (literally) from one scene to another; this sort of progression is sometimes annoying, as is his use of a narrator (though Julian Glover is very good in this role) to inform the audience of all the loose ends.

Special notice must be paid, though, to the wonderful acting of old pro Hugh Griffith, playing the Dominican monk John Tetzel. His best scene is the one in which he starts selling Indulgences in the marketplace (of course); these being religious documents which redeem the holder of his sins, and which were sold by the Church for cash. It is an exaggerated sequence, true. Griffith takes on the characteristics of a sideshow barker in a sort of medieval "Let's Make a Deal." But it too serves its purpose, that being to help the viewer understand why Luther rebelled, why he defied his superiors with "You can't strike bargains with God."

"Luther" does indeed have its faults. And had the film rights been purchased by anyone other than Ely Landau, the filmed revolutionist probably would have been given a more complete analysis. The narrator might have been excluded and the editing techniques changed — and the film might have been released with a "The Lion in Winter" or "A Man for All Seasons" road show status. Nevertheless, as it stands, "Luther" is still both exciting and informative historical drama ... and I doubt seriously that anyone could devote more intensity to the controversial character of Martin Luther than does actor Stacy Keach.

"Luther" played Monday and Tuesday at the Fox Theater. It was a special performance by The American Film Theatre and the evening admission price was \$5.

FILM FACTS: "Luther". Stars Stacy Keach, Hugh Griffith, and Patrick Magee. Screenplay by Edward Anhalt; based on the stage play by John Osborne. Photographed by Freddie Young. Edited by Malcom Cooke. Costume design by Elizabeth Haffenden and Joan Bridge.

Willis H. Flygare

Research chemist to deliver campus lecture Friday night

Dr. Willis H. Flygare, known for his research concerning the electronic structures of molecules, will deliver a public lecture at 8 p.m. Friday in room 5 of the Chemistry Building.

His topic will be "The Molecular Zeeman Effect and the Interpretation of Molecular Magnetic Susceptibilities." There will be no admission charge.

Flygare is professor of chemistry at the University of

Illinois. A native of Minnesota, he received his B.A. degree from St. Olaf College and His Ph.D. at the University of California at Berkeley.

As a research scientist, Dr. Flygare also is interested in high resolution microwave spectroscopy, relaxation and spectroscopy in molecular beams, the study of unstable molecules and the search for the study of molecules in the interstellar medium using radio

telescopes.

He is a member of the advisory editorial board of Chemical Physics, associate editor of the Review of Scientific Instruments, and a former associate editor of the Journal of Chemical Physics. His honors include an Alfred P. Sloan Fellowship, the Phi Lambda Upsilon Presenious Award in 1971, a Guggenheim Fellowship in 1972, and the Leo Hendrick Baekeland Award in 1973.

Chemical engineers present papers

Tech chemical engineering department has five graduate students, 15 seniors and five members of the faculty currently attending the annual meeting of the American Institute of Chemical Engineers in Tulsa. Students are presenting four papers in the institute's 52 technical sessions.

The student chapter of the

AICHE decided its members should attend the 76th annual meeting. They started by submitting technical papers for presentation, and four of these were accepted. The faculty sought and received help from industry to charter a bus for the 25 who wanted to attend.

All of the papers being presented relate to current

problems in society, and directly or indirectly, each relates to problems of pollution. Student papers include:

"Products and Operating Characteristics of the Tech Retort," a paper dealing with a method for handling of cattle feedlot wastes, municipal solid wastes or agricultural crop wastes, written by G. L. Smith,

C. J. Albus Jr. and Prof. H. W. Parker, and read at the meeting by Albus.

"Sorption of Solutes by Polyethylene Oxide Using Gas-Liquid Chromatography," a paper which relates to handling troublesome by-products in the plastics industry, by Y. L. Cheng and Prof. David C. Bonner.

"Preliminary Flow Sheet and Economics for Production of Ammonia Synthesis Gas From Manure," relating to a new source of energy from waste products, by Wayne S. Wideman and Professors James E. Halligan and Parker.

"Screening Technique for Hazardous Metallic Compounds in Particulate Stack Effluents," relating to the problem of air pollution, by P. N. Lin and Prof. R. M. Bethea.

Parker will deliver the one faculty paper accepted for the meeting. Its title is "Fuels and Petrochemicals From Agricultural Waster" and was written by Parker and Civil Engineering Professor George A. Whetstone.

New group promotes Latin American ties

By JANET COBB
UD Staff

One of the newest student organizations on campus is the Latin American Student Association. Formed last semester, the group is seeking to involve the 60 Latin American

students on campus and anyone else interested in Latin American affairs.

Jose Servat, a graduate student from Peru and president of the organization, says, "There are two main purposes for the group's existence. One is to increase the cultural exchange and understanding between Latin American and U.S. students. The other is to help Latin American students adjust to life in the states."

Denise Infante, a freshman from Chile, said "The main idea is to help each other and we wish more people would come." Presently, there are approximately 25 members.

The group is trying to encourage more Latin American students to come to Tech, and to have a host student and a host family for each, according to Servat. They are working with the Institute of Andean Studies to get 10 full scholarships for graduate students to Tech from Chile, Peru, Bolivia, Ecuador, Colombia and Venezuela.

Other plans include organizing a library of Latin American magazines, Spanish conversation groups for U.S. students, and a dinner in April to include both Latin and U.S. students, he said.

Sponsors for the group are Dean John Bradford of the School of Engineering and Donald Boucher, assistant to the University President's Office.

Infante said anyone may come to meetings, not just Latin Americans. Meetings are every two weeks and more information may be obtained from the Tech Student Life office.

Soprano cancels campus program

Anna Reynolds, Metropolitan Opera star scheduled to perform as part of the University Artists Series Thursday, has cancelled her performance due to illness.

Another cultural event is being negotiated as a replacement in April. Tickets for Reynolds' performance will be accepted at a future performance or may be presented for refunds at the University Center.

Embassy secretary to address students

Claudius Thomas, second secretary to the Chancery Embassy in Washington D.C. for Sierra Leone, West Africa will address a Tech African Students Association dinner on general aspects of the African continent with emphasis on social and industrial progress.

The dinner and program are slated for 6:30 p.m. Sunday in the Coronado room of the University Center. A film presentation, African music, cultural events and African foods will also be available for those attending.

Museum film explores cosmic chaos theory

Dr. Immanuel Velikovsky, a psychoanalyst, has theorized that in the ancient past the earth stood still, tilted and literally turned upside down.

"Cosmic Chaos: Velikovsky's World," is the topic of exploration currently at the Moody Planetarium of the Tech Museum. The presentation will discuss the great natural catastrophe that supposedly occurred at approximately the

second millenium B.C. and caused a complete reversal in earth cycles.

"Velikovsky's World" will be showing in the Moody Planetarium now through April on Saturdays and Sundays at 3 p.m. Admission is 75 cents for adults and 50 cents for children. Members of the West Texas Museum Association are admitted without charge.

Fall Sorority Rush

Packets for the fall sorority rush may now be picked up in room 242, West Hall.

Social Worker Month designated in March

By JANET COBB
UD Staff

March has been proclaimed as Social Worker Month by the National Association of Social Workers. The purpose of the month is to recognize professionals and volunteers working in the field of social welfare, according to Jerry Mathews, director of the undergraduate Social Welfare Education Program at Tech.

Mathews said, "People have associated social welfare with money handouts to people that don't deserve it. It is really a much broader field. Social welfare covers everything from teaching a married couple to fight productively to helping the elderly."

Mathews said that the problem of keeping older people as participating, contributing members of the community is one of the most important

problems in social work today. Whether the person involved is elderly or has any other problem, "the goal of any social worker is to help him to reach his fullest potential."

"Social work has been going on since the first caveman asked his wife to help solve his problem, but as a profession it is relatively new," says Mathews. NASW was established in 1958 to help give direction to social work as a profession.

Professions people interested in social work may pursue include everything from birth control to job training. Some specific professions Mathews cited are family counseling, mental health and child welfare. "Right now," Mathews said, "the job market is limited because money is tight, but the human needs are really unlimited."

Woman get use of gym

WASHINGTON (AP) — After 2½ years, women at the White House have won access to what had been a male preserve: the exercise room in the Executive Office Building.

Alexander M. Haig Jr., President Nixon's chief of staff, gave the order after appeals from women on the presidential staff that they need exercise, too.

So, starting March 18, the miniature gym with its sauna, whirlpool bath and exercise bicycle will be open from 8 a.m. to 11:30 a.m. for the women staffers.

Their long campaign won, such aides as Counselor Anne Armstrong, consumer adviser Virginia Knauer, women's activities adviser Jill

Ruckelshaus and press office assistant Diane Sawyer can pay their \$20-a-year fees like the President's men and take their exercise.

The exercise room was carved out of two ground-level offices in the Executive Office Building, next door to the White House.

Blood Drive

There will be a campuswide blood drive today from 10 a.m.-4 p.m. in the Mesa room of the UC.

Earth Week

Overpopulation Day is today's topic during Earth Week. A speaker from Planned Parenthood will speak and present films at 3:30 p.m., and the film "No Blade of Grass" will be presented at 7:30 p.m. in the UC Coronado Room. Admission to the movie will be 50 cents.

Wesley Foundation

Noon Dialogue today will feature Don Holmes, a Lubbock taxi driver. A hot meal will be served for 50 cents. The Wesley Foundation is located at 2420 15th Street.

Angel Flight

Angel Flight will meet tonight at 8 p.m. in the Seminar Room of the Social Sciences Building.

SA Housing Commission

The Student Association Housing Commission will meet at 6 p.m. today in the SA Office.

A&S Council

Arts and Sciences Council will meet at 8 p.m. today in the conference room of the SA office.

Evaluation group to inspect Tech education unit

A 14-member team of representatives of the education profession at university, college, secondary and primary school levels will be inspecting the Tech College of Education this week.

Programs for training teachers, administrators and supervisors in education will be the subjects of the review by the members of the National Council for Accreditation in Teacher Education.

Upon completion of their evaluation, the team will compile a report for Tech officials, make any necessary recommendations to the University and rule on accreditation for Tech programs.

Tech Med School library awarded \$49,000 grant to build collection

The medical library of Tech School of Medicine has received a \$49,000 grant from the National Library of Medicine in Bethesda, Maryland.

The one-year grant began on March 1 and will be used to assist the Med School library in building its collection of books, journals and audiovisual materials.

Dr. Charles W. Sargent, director of the library, explained that, because of the Med School's status as a developing school, the library collection needs strengthening in several areas.

"We're weak in collections in radiology, bioengineering and pediatrics, for example," Sargent said. He added that both books and journals were needed but that a very critical need was to acquire back sets of certain journals.

"Many of the journals we

have now run from 1972 to date," Sargent explained. "We need to pick up retrospective journal sets going back about 10 years in order to have a resource for medical research."

Sargent added that the audiovisual collection also needs more support. "We need to get packaged self-instruction materials, films and videotapes to support the Med School's teaching effort."

The grant was made under the National Library of Medicine's plan for sharing resources in an area. The medical library will

use the grant to build up collections that can be drawn upon by individuals and activities in the surrounding region. As an example, nursing schools, hospitals, and physicians in private practice in the West Texas region may benefit from material acquired by the medical library under the grant.

Sargent pointed out that one of the more difficult parts of the library's task is to plan and prepare for the future "we have to begin working now on a basic collection in allied health

sciences so there will be some supporting library material when the School of Allied Health Sciences receives funding and begins operation," Sargent said. "Another area we may have to begin building up soon is nursing," he added.

The National Library of Medicine grant also will help the Tech medical library build a foundation from which to supply the library and information needs of the Regional Academic Health Centers currently under development in Amarillo and El Paso.

Don't let the price of a college education stop you.
 The price of a college education is skyrocketing. The Air Force has done something about it. For the first time, the 6500 Air Force ROTC Scholarships include the 2-year program, for men and women.
 If you qualify, the Air Force will pay for the remainder of your college education. ROTC 2-year scholarships cover full tuition, reimbursement for textbooks, lab and incidental fees, and \$100 a month, tax-free.
 To cash in on all this apply, qualify, and enroll in the Air Force ROTC at room 27, Social Science building or call 742-2145.
 It's a great way to finish your college education in the money, and enjoy a future as an Air Force officer.

The functions you need... at prices you can afford.

SR-10
 \$89⁹⁵

SR-11
 \$109⁹⁵

Texas Instruments SR-10 and SR-11 slide-rule calculators.

SR-10. SR-11. Two proven performers. And now with crisp, new price tags.

At only \$109.95, the SR-11 is priced so you can have one of your own. Yet, it delivers the computation power to handle a wide range of slide-rule functions.

A single keystroke gives you square roots, squares, reciprocals, and multiplication and division by a constant or Pi. And using simple methods, you can quickly compute nth powers, nth roots, sines, cosines, tangents, arc sines, arc tangents, exponentials and logarithms.

Without writing down interim results, you'll be able to solve quadratic equations, the sum of products, the sum of quotients, the reciprocal of the sum of reciprocals, the square root of the sum of squares and more.

But all this scientific capability doesn't mean the SR-11 is hard to operate. An easy-to-use algebraic keyboard lets you key problems as you'd write them on paper. Data may be entered in full floating decimal point, scientific notation, or any combination of the two. And the SR-11's bright, 8-digit display is clearly visible for hours of fatigue-free operation.

A little more capability than you need? Then take a look at Texas Instruments SR-10. Except for the absence of a Constant capability and Pi Key, the SR-10 has the same basic features and capabilities as the SR-11. But it costs just \$89.95.

Both the SR-10 and SR-11 include AC adapter/charger, vinyl carrying case, user's manual and applications guide. And both carry TI's full year warranty against defects in parts and workmanship.

Order your SR-10 or SR-11 from Texas Instruments and use it for 15 days. And if you're not completely satisfied, just return it for a full refund.

SR-10. SR-11. Either way, you get the functions you need... and at prices you can afford.

Try the SR-10 or the SR-11 for 15 days at no risk.

Send this order form and enclose a check, money order or company purchase order of \$113.90 for each SR-11 (\$109.95 plus \$3.95 postage and handling). Or \$93.90 for each SR-10 (\$89.95 plus \$3.95 for postage and handling). Use either for 15 days, then if you're not completely satisfied, just return it in the original carton with all accessories for a full refund. Please add state and local taxes where applicable.*
