Leader vows action if carrier enters bay

By The Associated Press

Libyan leader Col. Moammar Khadafy vowed Thursday to turn the Gulf of Sidra into a "red gulf of blood" if the U.S. aircraft carrier Nimitz and its battle group dare to re-enter the disputed bay in the southern Mediterranean.

President Reagan has said there are no plans to involve U.S. forces in the region if Libya clashes with Sudan, its U.S.-backed neighbor, but that American troops have a right to defend themselves if fired upon.

Two U.S. jet fighters conducting war games from the Nimitz shot down a pair of Libyan planes after being fired on over the gulf in August 1981, and the Nimitz and its battle group just completed another set of maneuvers there.

"Entering Sidra means an invasion of Libya. The Libyan people want to live as free people and won't accept foreign occupation. The Gulf of Sidra will turn into a red gulf of blood if anyone tries to sail through it by force," Khadafy told his Parliament in the Libyan capital of Tripoli.

In an address carried by Libya's official JANA news agency, he warned that the U.S. Navy, operating north of the Gulf of Sidra, "forms a challenge to the Libyan nation. The Libyan people won't stand and watch idly if pushed too far.

"We will not permit America or any foreign state to enter the Gulf of Sidra or any other part of Libyan waters, and this

includes the Soviet Union, to which were are linked by a relationship of friendship," Khadafy said.

"The Libyan people are ready to fight to defend their land, their water and skies," he said. Some of the waters claimed by Libya are 100 miles from shore. The United States recognizes a three-mile limit.

Pentagon sources in Washington said the United States has sent AWACS planes to Egypt and moved the Nimitz and its battle group 100 miles off Egypt's northwest coast to counter a Libyan aircraft buildup apparently aimed at Sudan.

Reagan said the radar surveillance planes were in the area on a training exercise. The Egyptian Foreign Ministry said current military activities in Egypt were "normal."

Sale of the Airborne Warning and Control System planes to Saudi Arabia several years ago caused a storm of protest in Israel, but Israeli officials had no immediate comment on the latest deployment.

The Pentagon sources, who declined to be identified, said Khadafy had moved air units to bases in Chad, the adjacent country to the south where Libya has been supporting one faction in a civil war.

Those units appear to threaten Sudan, Chad's eastern neighbor, the Pentagon sources said, and Egypt deployed air force units to bases in southern Egypt to be ready to counter any Libyan move against Sudan.

'How long?' humorist asks Tech audience

By MICHAEL CROOK
University Daily News Editor

Human rights activist, actor, political analyst, lecturer, social satirist and rare wit: Dick Gregory is best described as a Renaissance Man.

Gregory came to Texas Tech University Thursday as a key part of the 13th annual celebration of black awareness here, delivering a call for racial unity while asking the question, "How long?"

He first became well-known in the 1960s for his biting racial humor and social satire. His first movie, "Watermelon Man," told the story of a white man who suddenly changed skin color to black, with the attendant social stigma.

Gregory has made a long journey since the turbulent decade of civil rights struggle.

His black beard is tinged with grey and his face is etched with deep lines, dark circles under the piercing eyes: the only sign of many 40-day fasts he has suffered through to increase public awareness about racism, discrimination and human rights.

"How long will you let a handful of manipulators keep manipulating your lives?" he asked of the audience.

"How long will you live in a country where the rich can do anything they want?"

"How long are you going to take this craziness? I wish we'd get it together and change things, turn it around. We let anybody that is powerful manipulate us."

"How long will you tolerate a system where 6 percent of the population controls 97 percent of the wealth and pays less than 50 percent of the income taxes?"

"If democracy destroys the soul and makes people want to attack the weak, then maybe we need another system."

Very few of the current issues in America escaped Gregory's barbed wit. He spoke of unemployment, nuclear power, racism, sexism, communism, Vietnam veterans and higher education.

Senate approves football block seating plan

By ROBIN FRED
University Daily Reporter

The Texas Tech University Student Senate approved Thursday night a plan to provide a block seating option for campus organizations at Red Raider football games.

The bill will go to the student body for approval March 9 during Student Association elections.

According to the bill, any student organization registered with the Dean of Students' office is eligible for a seating block of either 50 or 100 seats in Jones Stadium.

Also, a separate block of 300 seats will be set aside for groups of non-affiliated students on a first-come, first-serve basis.

The plan calls for a maximum of 3,000 seats (about one-fifth of total student section seating) to be allotted for block

seating. Ten sets of 300 seats would be set aside for group seating, and those sets would be divided into blocks of 50 and 100 seats.

Sen. Susan Gaffney, who sponsored the bill through committee, said the best student seats were not chosen for block seating. No seats in sections 17-21 (lower level seats between the 20-yard-lines) or sections 116-119 (upper level seats) have been allotted for group seating.

The band and Saddle Tramps still will be seated at the bottom of sections 20 and 21, however.

Spirit coordinating committee chairperson Larry Alexander said he and Student Association President Charlie Hill began working on the plan last fall with input from Raider coach Jerry Moore.

Alexander said block seating was available for Tech games until 1971, but because of problems with some groups,

the limit of seats available for a group of friends was placed at six.

Alexander and Hill first discussed the possibility of bringing the option back to allow larger groups to sit together.

"You're going to have a better time (at football games) when you're surrounded by your friends," Alexander said.

Student services chairperson Brian Newby said he thinks students will support the measure because many of them can benefit from block seating.

"Overall, we (committee members) looked at this as a very positive aspect of something the Senate is doing to help students," he said.

"For a long time, there has been a need for block seating and by establishing a program for student organizations, most students can benefit. Most people are involved in at least one (organization)," Newby said.

He said his committee gave the bill a

favorable recommendation after making some changes and adding a provision to have the next Student Association president draw up specific guidelines.

"I know there are going to be problems (in implementing block seating)," he said. "And we feel the president of the Student Association will be the best one to set the final guidelines."

Gaffney presented plans for implementing the seating plan to Newby's committee last week and to the entire Senate last night.

Under the plan as revised by the student services committee, representatives from student organizations can apply for a seating block between noon Wednesday and noon Friday a week prior to each home game.

The group representative will tell the Student Association secretary approximately how many seats will be needed. The secretary may combine groups of

less than 50 people in order to conserve seating blocks.

If organizations applying for group seating outnumber the blocks available, a drawing for the blocks will be conducted Friday afternoons in the Student Association office.

Gaffney said she does not think that will happen often, though.

Drawings for section locations will be conducted Tuesday afternoons before the Saturday games. The location of a group's seats within the section allotted to that group will be handled on a first-come, first-serve basis, Newby said.

An organization will not receive more seats in a section than they produce coupons for at the time of the Tuesday drawings.

After Tuesdays, all unclaimed seats in the block sections will go back into the student draw.

Documents found in Aspermont courthouse

By DAWN R. LAZARUS
University Daily Staff

A socialist newspaper from 1911 was one of the documents found in a recently opened time capsule in the Stonewall County Courthouse in Aspermont.

The capsule — which contained documents including The Chicago Daily Socialist, the New and Old Testament Bibles, The Aspermont Star and a Masonic manual and register — was recovered when the Stonewall County Courthouse was demolished.

Rebecca Herring, assistant archivist at the Southwest Collection at Texas Tech University, said that socialism was an acceptable political movement among West Texas farmers in the early 1900s.

She said further research seems to indicate that a Stonewall County postmaster who received the Chicago Daily Socialist was responsible for placing the newspaper in the cornerstone.

Because water had seeped into the cornerstone and damaged the materials inside, Buddy McNutt, vice chairperson of

the Stonewall County Historical Commission, contacted the Southwest Collection to see if anything could be done to salvage the materials.

Herring instructed McNutt to place the materials in a freezer to prevent any further mold damage until the Southwest Collection can collect the material.

Herring found the newspapers and books in the galvanized tin box were infested with mold and mildew.

"Higher quality paper containing sizing is used in books, and molds tend to attack this more often. The newspapers weren't in as bad condition as the books because mold isn't as attracted to the cheaper quality paper that is used in newspapers," Herring said.

Killing the mold on the material was Herring's first goal. A workshop sponsored by the Society of American Archivists in basic archival conservation gave her the background to build a thymol chamber that would destroy the mold and mildew.

Herring said facilities at the Southwest

Collection will not allow her to do any further work on the books, which will be returned to Aspermont in the next two weeks.

Herring's next step was to make the newspapers soft and flexible. After the newspapers went through the demolding process, she placed them back in the chamber, this time using a water and thymol solution which humidified the papers.

Before encapsulating the newspapers, Herring de-acidified them using a chemical solution called "Wei t'o." De-acidification was necessary because the acid in the newsprint eventually would destroy the newspaper.

Finally, the newspapers were encapsulated using a mylar type of polyester that will not damage the paper. The mylar also takes all the stress out of the newspaper.

Now that the time capsule materials have been protected against any future damage, they will be placed on display in the new Stonewall County Courthouse.

Interim associate dean of engineering resigns

By KELLY KNOX
University Daily Reporter

John Walkup resigned Wednesday from his position as interim associate dean of engineering, hoping that his "stepping aside will perhaps aid in the healing process which we all want to see take place in the College (of Engineering)."

John Reichert, former Crosbyton Solar Power Project director, was dismissed Feb. 8 from that position by Engineering Interim Dean Jimmy Smith after Electrical Engineering (EE) Chairperson Russell Seacat refused to carry out that action. Seacat resigned the same day.

In a letter to Smith, Walkup wrote, "Due to my disagreement with the decisions made last week

relative to Dr. John D. Reichert's direction of the Crosbyton Solar Power Project and the resignation of Dr. Russell Seacat as Chairman of the Department of Electrical Engineering, I believe I have put both of us in an awkward position. I am now convinced that the best and honorable course for me is to resign immediately from my position as Interim Associate Dean of Engineering.

"I deeply regret the need to make this decision and have appreciated the opportunity to serve as a member of the interim staff of the College of Engineering," Walkup wrote.

Walkup signed an EE faculty statement last week that strongly criticized Smith for dismissing Reichert.

"I felt both Jimmy (Smith) and I were both in an awkward position because of the EE statement I sign-

ed," Walkup said Thursday.

"It (the resignation) is not intended as a statement. It would bother me if people thought it was part of a grand strategy," he said.

Walkup, who said his resignation was a matter of personal ethics, will remain on the EE faculty as a full professor.

The statement signed by EE acting Chairperson Marion Hagler and 31 other EE and CS faculty members indicated that the faculty members resent Smith's actions.

"The removal of a faculty researcher as director of his own project and the removal of a chairman as he stands to protect him are most dangerous precedents. We deeply regret Dr. Smith's failure to provide defensible explanations for his actions," the statement said.

FRIDAY

SPORTS

Michael Young will be one of the players trying to protect the University of Houston's No. 4 national ranking as the Cougars challenge the Texas Tech University basketball team at 7:30 p.m. Saturday at the Municipal Coliseum. See TECH, page 10.

WEATHER

Fair through tonight with a slight chance of showers Saturday. High today and Saturday upper 60s. Winds westerly at 10-20 mph today.

LETTERS TO THE EDITOR

To the editor:
I am writing this letter in regard to the letter to the editor concerning the Student Association Recruitment program (UD Feb. 17). I am one of those said "clique members" that employed "elitist methods" in recruiting prospective students. Apparently you have obtained your misinformation from the same source as the senator who wrote a resolution condemning the SA's actions in student recruitment.
Let me begin by saying that the \$300 expenditure was not intentional. When a new program is started, certain unforeseen problems occur; but in time the SA will receive all funding from outside sources. In the meantime I must mention that the \$300 expenditure cost each student at Tech approximately less than 1 cent, a very minimal amount. Other student organizations such as UMAs (which was given \$1,000 and of which you, Ms. De La Graza, are president) are allocated Student Service Fee monies by the Tech Senate on how much student recruitment THEY do.
In our recruitment efforts, we try to recruit for all of Tech. We DO NOT locate students of our "same background." We did, however, employ a policy on how these students were chosen. We, along with the help of students not involved in the SA, called (not wrote) our hometown schools and asked the high school junior counselors to submit a list on the top 10 outstanding junior students, not only in academics, but also in involvement in school. On these applications we did not ask their socio-economic status, sex, race, color or religion. We did ask their grad averages and honors and memberships attained in high school. When these applications were returned, we sat down and tried to invite the most outstanding students from around the state.
If this is an elitist method of choosing students then what do you call methods used by such organizations as UMAs who only recruit one type of student — Mexican-American — with student money. Another question: If we are wrong in recruiting students, doesn't that mean that other organizations which received Student Service Fee monies are wrong in recruiting students? Also?
If you still have any doubts, you are welcome to see the applications of the students chosen and call to question them on their reaction to the Tech Recruitment weekend. This is not necessary though, for we asked them to fill out a questionnaire about the recruitment and to give their likes and dislikes about the program. These are also available to you.
One final comment, in years past the Senate has had a large percentage on Senators representative of another organization on campus. From year to year this organization changes but it is neither the fault of the Senate nor the specific organization for having such a membership stronghold. It is the voter apathy of Tech students that allows groups who will go out and vote to get their members in the Senate. It is not voluntary elitism on the part of the Senate.

such a presentation at the next symposium.
With such a display of machismo (catch phrases "Big Fella up in the clouds is no fairy," ".44 magnum" and "slimeball"), they are the perfect male role model for all "lesser" men. Furthermore, how could any woman resist such a loving, caring, compassionate, open-minded male?
Name Withheld by Request of a Straight Lady who doesn't have the guts (stomach) to make it with a member of that opposite sex.

Sherry Crowell

To the editor:
With some amount of amusement I have read the recent letters to the editor concerning the "biblical" view of homosexuality. Some are well-informed, and the authors spent a great deal of time and study in preparing their letters; others have just written reactionary rhetoric. Both kinds of letters have been written on both sides of this issue that seems to make people so angry.
I would like to inform these people that Texas Tech University offers courses in both Greek and Hebrew. If these people have a real desire to know what the Bible says about this, and other contemporary moral issues, as well, I would suggest that they take advantage of these courses, and learn for themselves. Then they would not have to rely upon the letters to the editor of a newspaper for their information on the Bible.

David F. Turrentine

To the editor:
Watching this battle of brickbats in The UD I have started to tire of the endless biblical references made on behalf of both sides of the fence. This refers not only to the recent debate on homosexual's rights but also on such things as abortion, prayer in schools and the like.
The problem is that people are using the Bible as if it were an unquestioned authority on moral matters; an umpire, if you will, deciding all questions. Why?
The Bible does not inherently carry more weight than any other body of holy works from any other religion. All of the works in it, including the New Testament, were written no sooner than 80 years after the fact. They represent a record of oral tradition of a people. I admit that it is my belief that the Bible is not the word of God; but conversely, it is only on faith that anyone believes that it is the word of God.
The point is that to say that a homosexual is wrong in a universal sense because it says so in the Bible is faulty logic. The Bible is not a universal authority and so it can not be used to make universal statements.
All moral opinions are just that, opinions. It is impossible to make moral judgments for anyone else, ever. We may think that we know what's best and so may try to convince others, but to force someone to conform to your position is a violation of our social contract.
To make statements like "the country's morals are deteriorating" or "we need to get back on the True Path" with a wish to enforce, by legislation, a change for the "better" is to wish for a theocracy.

To the editor:
I was so glad to hear from learned colleagues Donaho, Goff, Holden and Smith that they have the answer, supported by research I presume, to the etiology of homosexuality. And, the therapy intervention recommended was unique to say the least — suicide or a return trip to "homeland" France. What an insight I am sure that the American Psychological Association Committee on Gay Concerns would be enlightened by

To the editor:
I respect the right of those groups who do not believe as I do that homosexuals deserve full rights under the law, that women should not be allowed freedom of choice, or that the separation of church and state is a fundamental precept of our country, to feel the way they do. By the same token I expect them to allow me to believe the way I want to, without interference.
We who live in this country are under an obligation to it to respect the principles upon which it was founded: freedom of choice, freedom of religion, freedom of speech, etc., pursue life, liberty and happiness. We have entered into this social contract in order to insure better lives for all concerned; however, we must constantly be on guard for abuses of that contract. We must carefully weigh each potential action we may take to see if it reduces our freedom. But we cannot use as our criterion of what are reduced freedoms anything but the simple question: "Is this person being denied the right to pursue life, liberty and happiness?"
We may not ask, "Is this morally more sound," nor "is this in the interest of the better people?" We cannot afford to oppress anyone.
Abuses of freedom are difficult to stop once started, and it frightens me to think that we are trying to abuse the freedom of a group of people whose only crime is love.

I ask those of you who consider homosexual criminals to reconsider what that means in terms of the abuse of a person's freedoms, the same freedoms you would fight for tooth and nail were someone attempting to take them from you.
Thank you so much for brightening what would otherwise have been a dreary Tuesday (UD Feb. 15). You have restored my confidence once more in Texas Tech and the abundance of open-minded thinkers we have here. In a society where violent, unpredictable types are lurking in every parking lot and around every corner, it is comforting to know that groups like CRAWFISH do exist. These sensitive, understanding folks who seem to have a hotline with "the Big Fella up in the clouds" really make me feel secure, because I know that their tactics include the intellectual approach of using "flamethrowers" and ".44 magnums" to placate their discontents. This must be a directive from the aforementioned "Big Fella".
Also, I must commend them on their succinct articulation. They certainly do know how to communicate on the level of the mature, university student: "...that is plain old ordinary bullshit, nothing more." "...(taking) a .44 magnum and blowing your own brains out...you slimeball." "...pack up their Gucci luggage and haul ass back to France where they belong." As everyone knows, homosexuality did originate in France, and only homosexuals would ever buy Gucci ANYTHING. Gee, Gucci seems to be doing pretty well; must be due to the 10 percent homosexual population (that's one out of 10 people, for you CRAWFISH non-math majors).
In closing, permit me to recall the statement made by CRAWFISH regarding the underlying cause for homosexuality (which, incidentally, they should sell to a publisher; theologians, psychologists, and anthropologists have researched the subject for years and have not discovered the answer yet): "...it is not because they were born that way. It is because they just don't have enough guts to make it with the opposite sex." Well said, gentlemen. However, I always thought it would take more guts to stand up and admit a different way of life, realizing that you risk "flamethrowers" and social rock-throwing than to quietly blend in with the rest of the world. Hmm...
Susan Graham

'Let Reagan be Reagan'

Russell Baker

recall, it was Bush's aim to become Reagan. This was two years ago when the Republican party consisted of only three wings; to wit, the right wing, the left wing and the middle wing.
Yes, Mrs. J.T., American political parties can have a middle wing. This is why they are so frequently seen flopping around on the ground instead of flying. Their excess of wings weights them down so severely that it is almost impossible for them to get airborne.
Follow me closely now: Two years ago when Reagan took office, the Republican right wing was so huge, and the left and middle wings so tiny that the flapping of the enormous right wing, which was necessary for take-off, almost destroyed the stunted and ineffectual left and middle wings.
To avoid being shaken off their conveyance, the left and middle wings tried to move onto the right wing. This was difficult for the left wing because of its unfortunate placement, and left-wing components like Sen. Bob Packwood of Oregon had to content themselves with complaining that the president, way out on the right wing, was out of touch with reality and wasted time telling anecdotes about orange juice and vodka.
This set off such a flapping of the right wing that it almost blew Packwood right off the bird. "And too bad it didn't," was what you heard from the right wing, because if there was one thing the right wing despises, it is the left wing.
Bush, more comfortably located on the middle wing, sought to move onto the right wing without drawing attention to himself. "Let Bush be Reagan," was the whisper among his advisers.
But, ah, Mrs. J.T., the right wing of the Republican party is different from all other political wings. Like the elephant, appropriately, the Republican right wing never forgets, and what it never forgets is the identity of those who once, just once, disagreed with the slightest flap of right-wing feathers.
Did you support Henry Kissinger's detente? Were you unwilling to go to war to keep the Panama Canal? Never shall you cross onto the right wing.
In short, Mrs. J.T., what we had was classical instance of political wing proliferation, with the right wing dividing into right-wing middle wingers and right-wing left wingers while the purists clung on to preserve a right-wing right wing.
Until a few weeks ago Reagan, urging all feathers to stay the course, had remained faithful to the right wing's right wing, which held that you could not make an omelet without breaking an economy. The rush from right wing to middle and left wing by such Reaganists as Senator Dole, Senator Baker and John Connally, to cite only a few of those scurrying from the wingtip, has put the president, however, in a potentially embarrassing position.
Shall he move with the flow and wind up on the middle wing with George Bush? "Let Reagan be Reagan," is the cry of the pure Reaganists, which means, "Don't let Reagan be Bush."
If he does not, of course, he risks being involved in an ornithological event of historic absurdity, which would be recorded in headlines saying, "Right Wing Lays An Egg."

BLOOM COUNTY

VISITOR'S PASS

Ruling given in school suit

By The Associated Press

HOUSTON — An attorney for plaintiffs who lost the latest round of a 26-year-old desegregation lawsuit against the Houston Independent School District said Thursday he has not decided if he will appeal or file a new suit.

Theodore Shaw, assistant counsel for the NAACP's Legal Defense and Educational Fund, said he had not yet seen a 27-page opinion from an appeals court which ruled Houston schools no longer are segregated.

The 5th U.S. Circuit Court of Appeals said in its Wednesday ruling the plaintiff can file "without prejudice" a new suit which might draw into the action a number of chiefly white suburban school districts.

"That would be a totally

new ball game with lots of different players," Houston school Superintendent Billy Reagan said.

The ruling was the latest action on a 1956 suit challenging the district's policy of maintaining a dual school system for purposes of segregation.

"The question is whether or not there are schools that are racially isolated or imbalanced which could possibly be desegregated," said Shaw, who said he has responsibility for his office's school docket.

The appeals court also upheld U.S. District Judge Robert O'Connor's ruling that the NAACP could not add 26 new parties to the suit. That action would have expanded the suit to cover Houston's metropolitan area from its present limits inside the Houston Independent School District.

NEWS BRIEFS

Prof indicted on sex charges

A Texas Tech University assistant professor was indicted Thursday on one count of aggravated sexual abuse and four counts of indecency with a child.

Eugene L. Aronin, assistant professor of education, was named in a sealed indictment after two brothers, ages 9 and 11, appeared before the grand jury and reportedly testified that Aronin approached them at the Tech Library.

Economic figures encouraging

WASHINGTON (AP) — Factory use is up for the first time in nearly a year, and fewer Americans are filing initial jobless claims, the government said Thursday. The reports spurred wider agreement that the recession has ended.

The new indicators followed President Reagan's claim Wednesday night that "as a result of the economic program we already have in place, the recovery is beginning to flex its muscle."

General to speak at Tech

Directed beam energy systems of the Department of Defense will be discussed by Air Force Maj. Gen. Donald L. Lamberson at 4 p.m. today in the Lankford Lab of the Electrical Engineering Annex.

Lamberson will discuss Defense Department weapons systems using directed beam energy, such as lasers, particle beams or electromagnetic waves. Lamberson is assistant for directed energy weapons, Office of the Under Secretary of Defense for Research and Engineering.

The address is free to the public and is part of the Halliburton Distinguished Lecture Series.

Lavelle ignores subpoena

Ex-EPA official warned of contempt charges

By The Associated Press

WASHINGTON — Rita M. Lavelle, former head of the Environmental Protection Agency's much-investigated hazardous waste program, defied a House subpoena Thursday and was warned she may be held in contempt if she continues to defy "the will of the Congress."

Rep. John Dingell, D-Mich., chairman of the House Energy and Commerce investigations subcommittee, said Lavelle — who was fired by President Reagan last week — will be given one more chance to cooperate with his panel's investigation into the \$1.6 billion "superfund" program.

If she still refuses to appear, he said, she likely will be voted in contempt.

"The patience of the committee is wearing somewhat thin," Dingell said. "We will not tolerate acts which frustrate the will of the

Congress."

Meanwhile, the White House issued a qualifier to Reagan's statement Wednesday that he would not assert executive privilege over documents sought in the growing number of congressional investigations of EPA.

Deputy press secretary Larry Speakes said Reagan envisioned turning documents over to the Justice Department for review of possible wrongdoing, not to Congress.

"If there is any evidence of wrongdoing, the body to go to is not the Congress, but the Department of Justice, which enforces the law," Speakes said. "If the Department of Justice chooses to go to the Congress, that is their choice."

He said, however, the administration was serious about pursuing the investigation.

"I can assure you from the top of this administration that the idea is, we will not shield

documents that may contain allegations of wrongdoing or improper conduct, and the president has ordered from top to bottom that there be no shielding, no coverup, whatsoever."

Asked whether Reagan was dropping his claim that executive privilege protected the documents, he replied: "Absolutely not. ... This is part of the ongoing discussions with the Levitas committee."

He was referring to negotiations with Rep. Elliott H. Levitas, D-Ga., chairman of the House Public Works investigations subcommittee, which also has subpoenaed EPA documents.

Levitas' and Dingell's panels, as well as four other House and Senate committees and the Justice Department, are investigating a series of

charges, including allegations of sweetheart deals to industry polluters and possible political manipulation of superfund grants.

EPA Administrator Anne M. Gorsuch refused on Reagan's orders last December to deliver documents to Levitas' committee, saying their premature disclosure would jeopardize lawsuits against polluters.

Levitas and administration lawyers have met twice during the past week in an effort to reach a compromise on congressional access to the documents. Both sides said earlier they were close to a deal, but committee spokesmen said late Thursday there would be no announcement until Friday afternoon, at the earliest.

Humorist speaks

Continued from page 1

He said there is an alcohol problem at every college in America, along with drug problems. "You got to come to college to smoke a reefer?" he asked.

"There is no education. They program you, treat you like animals in a zoo."

"Most colleges and universities in America are cesspools of hatred. How many people did you ignore today when you walked across the campus?"

Students are in college to learn how to make a living, but if they don't know how to live, they have learned nothing, Gregory said.

Turning to black civil rights, he said, "Some black folks say we haven't made no progress (in civil rights), but it's obvious those people weren't part of the (civil rights) movement, because we have made progress."

"We made progress because a lot of black folks and white

folks were willing to lay down their lives to make things change," he said.

"But we need more progress. If you stick a knife in me and then pull it out three inches, I'm not going to say you did me a favor."

Black people and white people should get together, should talk and really get to know each other. If we knew each other, we could change the system, Gregory said.

SCIENCE AND ENGINEERING MAJORS: TAKE OUT INSURANCE NOW
How about an "insurance" policy that your science or engineering degree will really be used? It would be nice. Especially considering the work you put into such a degree.
The Air Force will use your talents. We have openings for young men and women majoring in selected science and engineering academic fields — like Aeronautical, Aerospace, General and Electrical Engineering, Mathematics, Physics and Computer Technology, and many more.
One way to get into these jobs is through Air Force ROTC. Our AFROTC scholarship can help you financially so you can concentrate on getting your degree. AFROTC is a great opportunity to help yourself through college, and the Air Force is a great opportunity to really use what you learn.
Look into the Air Force ROTC program at your campus. It's good insurance.
Interested? Then call or come by and talk to Captain Davis (Rm 35 Holden Hall 742-2143) about applying for entry into the Professional Officers Course. Hurry, time is running out for next years selections.
AIR FORCE ROTC
Gateway to a great way of life.

E-Systems continues the tradition of the world's great problem solvers.
Guglielmo Marconi was able to see communications revolutionized by his development of the first successful system of radio telegraphy—the wireless. His first experimental transmissions were no more than a few feet. But, within a quarter of a century, he had advanced his system to the point that a radio message sent from England could be received in Australia.
E-Systems scientists and engineers continue to expand the technology he began. Today, communications equipment designed and developed by E-Systems engineers is used extensively around the world for line-of-sight or satellite communications, digital communications and applications requiring micro-processor-based teleprinters, tactical radios and microminiature HF, VHF and UHF equipment.
In addition to communications, E-Systems engineers are solving many of the world's toughest problems in antennas, data acquisition, processing, storage and retrieval systems and other systems applications for intelligence and reconnaissance. Often, the developed systems are the first-of-a-kind.
For a reprint of the Marconi illustration and information on career opportunities with E-Systems
in Texas, Florida, Indiana, Utah, and Virginia, write: Dr. Lloyd K. Lauderdale, Vice President Research and Engineering, E-Systems, Inc., Corporate Headquarters, P. O. Box 226030, Dallas, Texas 75266.

Financial outlook of university discussed by Tech VP

By ALISON GOLIGHTLY
University Daily Reporter

Texas Tech University spends the least amount of money per student for computing services of the six largest colleges in the state, Vice President for Finance and Administration Gene Payne said.

"We have built up a history of saying computing is not very important at this institution. This is because the university has not spent the dollars available for this area.

"Some things we need to reconsider is how we are using our available funds," Payne said.

Several institutions in Texas have been trying to develop a formula for funding computing services for the past six or seven years, he said.

Payne spoke to a group of faculty members and administrators Thursday about the current and future financial outlook for Tech. The meeting was one of the monthly Academic Leadership Development Program meetings at which issues affecting Tech are discussed.

Tech receives the third largest amount of higher education funding in the state, Payne said.

Between 80 and 90 percent of every state institution's funding is based on formulas directly related to the institution's enrollment.

Although other states also use a formula system to establish the amount of funding institutions receive, Texas' formula system is more detailed, Payne said.

Texas uses 12 formulas, based on need, to allocate money to different areas within the institutions, Payne said.

Every two years, a formula committee composed of representatives from various institutions in the state meets to review the formulas, Payne said.

"(The formula system) is without a doubt the fairest and most equitable way of funding 34 state institutions," Payne said.

The formula funding system in Texas is an efficient system for allocating funding because it cuts down on politics associated with funding.

However, Payne noted some obvious problems with the formula-system.

For example, some of the formulas discriminate against smaller institutions.

In the general institutional expenditures area, as the institution's enrollment increases, the amount of dollars per student increases, Payne said.

Another problem with the formula system is that when you put together a budget you can't underfund some items and put more money into other items, he said.

However, if surplus money exists at the end of the year, the funds are available for re-appropriation as long as they don't exceed 2 percent (the 98 percent clause), Payne said.

Payne said the 98 percent rule makes it difficult for growing institutions to save money for future needs.

Since Tech has been more or less level in enrollment the rule has not been a significant problem, he said.

However, if Tech goes through another growth period it will be a problem, Payne said.

"We have a very good history of spending close to the legislature's appropriation for each area," Payne said.

However, Payne said higher education's share of state fund-

ing has not held up. "Higher education in the last decade has had an image problem," he said.

"We've got some real competitors for state funding," Payne said.

It is important to carry on a continuous fight on a political level and an objective level to receive the kind of funding you want, he said.

In a recent study by the Coordinating Board, Texas College and University System, Tech came out on top in the need for major repair and rehabilitation of the 33 or 34 institutions in the state. At least half a dozen of the schools are worse off than Tech is, Payne said.

He said the reason Tech was successful in receiving the top funding bid was because Tech staff put a lot of work into verifying their need for the money.

The economy of Texas still is very good compared to other states, he said.

KKs to get tougher on violators

By TIM McKEOWN
University Daily Reporter

Texas Tech University Police will take a tougher stand against moving traffic violations on campus, University Police Chief Bill Daniels said Thursday.

With increased use of radar and patrol units, Daniels said the department will try to get motorists to abide by posted speed limits and to observe stop signs.

"We've had a few complaints from faculty and students and so we're trying to get the traffic slowed down," Daniels said.

Although no major accidents or injuries this year have been reported, the patrol units are going to be "more obvious" in enforcement to prevent accidents, Daniels said.

The police chief said the 20 mile per hour zones throughout most of the Tech campus are hard to obey but are important to the safety of students and other motorists.

Daniels said that the city of Lubbock, not the Tech police, collects ticket fines for moving violations.

M.E.Ch.A. Congreso to meet Saturday

By TIM McKEOWN
University Daily Reporter

The first statewide M.E.Ch.A. (Movimiento Estudiantil Chicano de Aztlan) Congreso meeting this year will be Saturday at the University Center.

Ernest Barton, editor of Pasatiempo magazine and host of "Si Se Puede" talk show, and attorney David Garza will speak at the Con-

greso meeting.

Sponsored by the United Mexican-American Students (UMAS), the meeting should bring 40 to 50 M.E.Ch.A. representatives from other Texas universities, UMAS president Veronica De La Garza said.

"It's good that we have chicanos come in from all over Texas. This way, we promote self-awareness and realize we have common goals and pro-

blems as students," De La Garza said.

M.E.Ch.A. consists of chicano organizations at colleges and universities and is a leading developer of Chicano Studies Programs, De La Garza said.

One of the purposes of this meeting is to "discuss statewide issues that will affect chicano students, especially those (issues) in the legislature," said Sylvia Avila, a M.E.Ch.A. state officer.

The state level M.E.Ch.A. consists of two main governing bodies. The general body, or Congreso, meets every two months and the Executive Committee meets every month.

Registration for the Congreso meeting begins at 9 a.m. and the meeting will be from 10 a.m. to 4 p.m.

White emphasizes utilities' importance

By The Associated Press

AUSTIN — Gov. Mark White says a well-regulated utility industry in Texas is more important than a top credit rating for the state's bonds.

"That is not a test of how our utilities are being regulated," White told a news conference Thursday when asked if the recent shakeup in the Public

Utility Commission would affect Texas' credit rating.

"It's very simple for a monopoly to make money. The consumer has no alternative, so don't let the bond ratings be the indicator of the vitality of the industry," White said.

He said he was pleased to hear that bonding companies which rate the quality of utility companies had taken Texas out of first place in being the least effective regulator

among other states.

"That's a step in the right direction," the governor said.

"I want them to say that Texas is the most effective regulator. When you do that, you'll have a healthy utility industry and you'll have a consumer, be he homeowner or businessman, that can afford their electric bills."

Tuesday, two PUC commissioners, George Cowden and T.G. Smith, resigned, after

continued criticism from White and others that more needed to be done to lower utility bills. Cowden said he was quitting because of "irresponsible statements, of folks saying things they don't know what they're talking about."

Within four hours, White appointed former PUC commissioner Al Erwin, Houston, and Peggy Rosson, El Paso, to replace the two.

ENGINEERING TAKES ON EXCITING NEW DIMENSIONS IN THE AIR FORCE.

Computer-generated design for investigating structural strengths and weaknesses.

Developing and managing Air Force engineering projects could be the most important, exciting challenge of your life. The projects extend to virtually every engineering frontier.

8 CAREER FIELDS FOR ENGINEERS

Air Force electrical engineer studying aircraft electrical power supply system.

Engineering opportunities in the Air Force include these eight career areas: aeronautical, aerospace, architectural,

aeronautical, civil, electrical, mechanical and nuclear. Hundreds of diverse specialties are included in a wide variety of work settings. For example, an electrical engineer may work in aircraft design, space systems, power production, communications or research. A mechanical engineer might be involved in aircraft structure design, space vehicle launch pad construction, or research.

PROJECT RESPONSIBILITY COMES EARLY IN THE AIR FORCE

Air Force mechanical engineer inspecting aircraft jet engine turbine.

Most Air Force engineers have complete project responsibility early in their careers. For example, a first lieutenant directed work on a new airborne electronic system to pinpoint radiating targets. Another engineer tested the jet engines for advanced tanker and cargo aircraft.

OPPORTUNITIES IN THE NEW USAF SPACE COMMAND

Artist's concept of the DSCS III Defense Satellite Communications System satellite. (USAF photo.)

Recently, the Air Force formed a new Space Command. Its role is to pull together space operations and research and development efforts, focusing on the unique technological needs of space systems. This can be your opportunity to join the team that develops superior space systems as the Air Force moves into the twenty-first century.

To learn more about how you can be part of the team, see your Air Force recruiter or call our Engineer Hotline toll free 1-800-531-5826 (in Texas call 1-800-292-5366). There's no obligation.

Nobel prize winner talks on politics of agriculture

By University News and Publications

Making food a political tool is a mistake except in time of total war, Nobel Laureate Norman E. Borlaug said.

"There wouldn't be big surpluses today if it hadn't been for those embargoes on grain for the Soviet Union," Borlaug said. "It's unfortunate that the American farmer has to pay for this."

Meeting with Texas Tech University students and faculty Monday through Friday, the 1970 Nobel Peace Prize recipient discussed world agriculture.

"When we talk about food there are two problems: production and equitable distribution," Borlaug said. "There is no overproduction now, just bad distribution. Food is basic to as stable a world as we can make it. It is a basic necessity for a decent life and social and political content."

The scientist said it is a fallacy that man can turn to the oceans as a food source for an

increasing population.

"Ninety-eight percent of the world's food comes from land with only 2 percent from the oceans and inland waters," Borlaug said. "The only way we can increase the production of the seas is by consuming species we have not consumed before."

Borlaug believes the task agriculture faces is awesome in doubling food production for a projected human population of 8 billion in the year 2033.

"It took us from the beginning of agriculture until 1975 to produce 3.5 billion metric tons of food a year," Borlaug said. "Now we have to double that production in 50-60 years."

Up until 1930, opening up more land to commodity production was the answer to feeding an increasing population.

Since that time, however, improved technology more than increased acreage is the reason for bigger U.S. crops.

"Most urbanites have lost contact with the soil," Borlaug said.

UD editors honored with awards

By KATHY WALSH
University Daily Reporter

The Texas Tech University department of mass communications was honored Monday when the William Randolph Hearst Foundation announced the results of its 23rd annual College Journalism Awards Program.

The University Daily Editor Kippie Hopper received seventh place and a \$250 scholarship for her investigative story about Diana Cavazos' entrance to the Tech Medical School.

"I was really surprised because it was such a big award; I didn't expect it," she said.

Hopper said she always wanted to be a writer, and said she tries to maintain her high ideals about journalism.

Michael Crook, The University Daily news editor, placed 15th in the investigative writing competition with his United Way Campaign story.

"(The award) was an unexpected pleasure and a great boost to my morale as a journalist," he said. "I did the story because of my ideals."

Crook said he was taught well by the Tech journalism professors.

Chairperson of Mass Communications Billy I. Ross said each accredited college or university is encouraged to send its two best entries to participate in the Hearst competition. He said about 90 schools participated, entering approximately 180 stories.

Ross said he does not think the public realizes how difficult the competition is in the Hearst contest.

"The competition is extremely keen," he said.

Ross said the Hearst jury evaluates each entry and selects the top 20 stories. The jury then gives the top 10 entries cash grants ranging from \$1,200 to \$100. Matching grants are awarded to the journalism schools attended by the students who receive the awards.

"I'd like to see us in the top 20 more often," Ross said. "We were extremely pleased."

"I was really pleased that we got two in the top 20," Hopper said. "I think it's a good indication of what kind of

paper we have here."

Director of Journalism Harmon Morgan said the quality of the Tech journalism department is reflected by the awards.

"As director of journalism, I'm pleased that we placed in the contest," Morgan said. "I think to have a story selected in the Hearst contest is significant. This may be as high as we've ever placed."

"I thought the stories were well done," he said. "I thought (Hopper and Crook) made an effort to be fair and present all sides."

University police receive promotions

By TIM McKEOWN
University Daily Reporter

Two former Tech police captains were promoted to deputy chiefs as a result of an increase in duties, Texas Tech University Police Chief Bill G. Daniels said Thursday.

J. D. Fortner, in charge of University Police Operations, and Richard T. "Dick" Hamilton, in charge of Health Sciences Center Police Operations, were named to the positions Feb. 1.

"Creation of the positions

of deputy chiefs," Daniels said, "is a reflection of the growth of the two institutions. With that growth, the responsibilities have increased, and Fortner and Hamilton are well qualified to shoulder some of that added responsibility."

Fortner has worked for the Tech police since 1966 and currently is working toward his bachelor's degree in police science.

Hamilton began working for the Tech police part-time in 1967 and has a bachelor's degree in law enforcement.

Infertility problems now easier to diagnose, correct

By BECKY HOLMES
University Daily Reporter

For many couples who know the pain and frustration of infertility, having children is not a question of "when" but a feeling of "if only ..."

In recent years the study of infertility has uncovered new techniques of diagnosing and correcting fertility problems, numbering the days of the "barren" woman and the "sterile" man.

A female endocrine and infertility clinic has been a part of the Texas Tech University Health Sciences Center (TTUHSC) for about five years, said Dr. M.W. Heine, chairperson of the department of obstetrics and gynecology

at TTUHSC.

"Ninety to 95 (of 100) cases of infertility are usually no big problem," Heine said. "One out of six married couples has problems having children, and couples pursue help more readily today."

Fertility in both men and women decreases with age but more can be done in cases of female infertility than male infertility, said Heine, who has been working in the area of infertility since 1963.

"Couples are seeking help with infertility more than in the past because there are so few children up for adoption," Heine said. "This is because more unwed mothers are keeping their babies and more women are having therapeutic

abortions."

There are at least 3.5 million infertile couples in the United States. Specialists who treat infertility have helped bring about a successful pregnancy in 50 to 70 percent of all couples once considered infertile.

On the average, 70 to 80 percent of all fertile couples who want to get pregnant conceive within 12 to 18 months.

"We take our ability to conceive and to bear children for granted," said Barbara Eck Menning in a May 1981 issue of Essence magazine. Menning is founder of Resolve, a national self-help organization that assists infertile couples.

"When a couple discovers that they're infertile, that they

may never be able to produce a child, they become frustrated," she said. "Many feel guilty—many others feel a sense of grief."

A fertility workup usually is routine in questions of infertility. Although a man's workup may be painless, simpler and less expensive than a woman's, many men shy away from a fertility workup, fearing they may be the infertile partner.

The workup includes gathering both partners' sexual and medical histories, as well as performing a physical examination, before any problems can be diagnosed.

"A woman's menstrual period, if regular, is a good indicator of endocrine infertility," Heine said.

Several physical conditions in women can result in infertility. Some of these include ovulatory and hormonal disorders involving ovulation patterns and hormone production; tubal disorders, involving blockage of the fallopian tubes; uterine and endometrial disorders; and cervical disorders.

"Certain prescribed drugs— medication taken for an allergy or hypertension, for example— may affect female fertility," said Francis Ruffin in the May 1981 issue of Essence magazine.

"Women who have lowered their overall body fat through poor nutrition, overdieting and vigorous exercise ... may

interrupt their menstrual cycle or have no menstrual periods at all; they may be temporarily infertile," she said.

Prolonged use of birth control pills can make it difficult for some women to re-adjust to a normal ovarian cycle after they stop taking the pill.

The majority of cases of male infertility are a result of some malfunction in sperm production or problems in transporting the sperm from the man to the woman.

"One out of every 20 males has a low sperm count because of a lack of maturity of the cells that produce sperm," Heine said.

Microsurgery can reverse male vasectomies and female tubal ligations in up to 70 percent of the cases, Heine said.

About 30 percent of fertility problems are found in women, 35 to 40 percent in men.

Banquet to begin Week

The Texas Tech University Mass Communications Week will begin at 7 p.m. today in the Lubbock Memorial Civic Center with the annual Thomas Jefferson banquet.

The banquet will honor U.S. State Department Liaison William G. Harley with a world freedom of information (FOI) award.

Harley is the Senior Media Consultant to the U.S. National Commission for the United Nations Educational Scientific and Cultural Organization (UNESCO). Harley helped defeat moves to restrict the free flow of international news.

Banquet tickets are \$7.50 and may be purchased by contacting the Tech mass communications department at 742-3385.

CSEP The path to Air Force Engineering

The Air Force's college Senior Engineer Program offers junior and senior engineering students an opportunity to draw more than \$1,000 per month while attending school. In addition, the student is eligible for all the entitlements and benefits provided to the members of the Air Force.

The CSEP program is open to students with 12 months to 60 days remaining before graduation, who are presently attending an accredited university in various engineering majors.

To qualify for the program, a student must major in one of the following degree programs: aeronautical, aerospace, architectural, astronautical, civil, electrical, mechanical, or nuclear. Applicants must meet the following qualifications:

- Be a Citizen
- Be between 18 and 30 years of age at the time of commissioning.
- Be within 12 months, but not less than 60 days, of graduation. May apply for program up to 18 months before graduation.
- Pass a commissioning physical examination.
- Not be on active duty in the armed forces.
- Possess a minimum of 2.5 GPA on a 4-point scale for all college level studies, including academic major.
- Score a minimum of 25 on the verbal and 25 on the quantitative portions of the Air Force Officer Qualifying Test

After acceptance into the program, the students are enlisted into the Air Force in the grade of E-3 (airman first class) and draw the appropriate pay and allowances. They will be issued active duty identification cards and be entitled to the full range of benefits offered in the Air Force.

Following graduation students attend Officer Training School, Lackland AFB, Texas and after successful completion of OTS are discharged from enlisted status and commissioned as second Lieutenants. They are then placed on active duty with a 4-year commitment, working in their engineering specialty.

The Air Force offers a graduating engineer a challenge found in very few other careers. Responsibility is one of the first lessons an Air Force engineer learns. Newly commissioned officers can be given the responsibility for major projects.

LUTHERANS DO IT WRONG

But that's all right. We're very aware of our guilt and sin. Every service begins with confession and absolution. But that doesn't stop us from doing "it." The gospel turns trying situations into opportunities for hope. It seems to us that the opposite is worse: success has made many people into their own god. Luther said, "Sin boldly, but trust more boldly in God's grace."

Juvenile diabetes stopped in rats

Ordinary blood transfusions may eliminate disease in humans

By The Associated Press

BOSTON — Researchers have discovered that ordinary blood transfusions will prevent juvenile diabetes in laboratory animals, and say the transfusions someday may provide a way of eliminating the disease in humans.

The doctors found a few transfusions early in life from a type of rat that never get juvenile diabetes will stop development of the disease completely in rats that have a genetic weakness for the disease.

The researchers cautioned, however, that more research

is necessary before doctors try this simple therapy to prevent diabetes in humans susceptible to juvenile diabetes.

"We feel at the present time that we should not make the quantum leap from rat work to human work," Dr. Aldo A. Rossini said. "But this could be a plausible approach in the future."

The study was directed by Rossini at the University of Massachusetts Medical School. The study was published in the Feb. 11 issue of *Science*'s.

Unlike the more common adult form of the disease, juvenile diabetes often strikes

its victims in early adolescence. Diabetes destroys the ability to make insulin, a hormone necessary for the body to use and store sugar.

By age 18, about one in every 300 or 400 children in the United States has the disease. Diabetes accounts for about 15 percent of all diabetes and often runs in families.

Life expectancy after diagnosis is about 40 years, and victims of juvenile diabetes often suffer heart attacks, kidney failure and eye damage despite daily insulin shots.

Last week, Dr. George S. Eisenbarth and colleagues at

the Joslin Diabetes Center in Boston reported work with a blood test that will reveal early signs of the disease several years before irreparable damage occurs.

The latest study was conducted on a strain of lab animals called BB rats. Between 30 and 50 percent of these rats develop diabetes by the time they are 120 days old, and doctors believe their disease may parallel the disease in people.

In rats, juvenile diabetes probably is an autoimmune disease. This means that the animal's disease-fighting immune system attacks the tissue that produces insulin

and destroys it. Many experts believe juvenile diabetes also is an autoimmune disease in people, although the disease may have other causes.

The researchers are not sure why the blood transfusions worked. They theorize the diabetes-prone rats do not have enough of a particular kind of white blood cells, called suppressor cells, that turn off the production of tissue-damaging antibodies.

The researchers believe something in the transfusions, possibly extra suppressor cells, shut off the process that made the rats' immune systems attack insulin-making cells.

Governor backs proposal to aid Texas veterans

By The Associated Press

AUSTIN — Gov. Mark White said Thursday he is supporting a legislative proposal that would loan Texas war veterans up to \$20,000 to purchase a home through the Veterans Land Board.

Lt. Gov. Bill Hobby and Land Commis-

sioner Garry Mauro joined in the ceremony.

Mauro said 81 House members and 22 senators were co-sponsoring the measure in each house.

If approved by the Legislature and voters a Texas veteran could apply for up to a \$20,000 loan to be used as a down payment on a home. The loans would be financed by a \$500 million bond issue.

Murder conviction would be legal 'first'

By The Associated Press

MONAHANS — If a doctor accused of injecting air into a mortally wounded man's bloodstream is convicted of attempted murder, it would be a legal "first," his trial judge said Thursday.

State District Judge Joe Connally of Odessa said the attempted murder charge against Dr. Juan Perez Valladares was "the first trial on murder by air injection in Texas, and as far as I have discovered, the first in the nation."

The American Medical Association's law department in Chicago said no physician ever has been convicted of attempted murder or murder for injecting air into a patient's bloodstream.

Perez, 57, is charged with injecting 20 cubic centimeters of air — enough to fill about a third of a cigarette package — into gunshot victim Michael S. Hoffman's vein.

Two attending nurses testified Wednesday that Hoffman, of Bloomington, Ind., died two minutes after Perez injected a syringe full of air into the victim during emergency room treatment Nov. 4,

1981, at Ward Memorial Hospital.

Hoffman, 28, had been shot once in the forehead at point blank range during a bar room brawl in Monahans, a sleepy West Texas oil town of 9,000.

James Ralph Echols of El Paso, has been charged with shooting Hoffman and is being held on a 1982 robbery charge in Riverside, Calif.

Perez, a rabid anti-communist from Havanna who has practiced the last 15 years in Monahans, has termed as "lies" allegations he tried to finish off a dying patient.

Pathologist Richard Cohen testified Wednesday Hoffman died from the gunshot wound. He said in court it would take 100 to 300 cubic centimeters of air injected rapidly into the veins to kill an adult.

But Cohen said he was perplexed by allegations from emergency room nurses Brenda Rowan and Peggy Brown that the popular Perez injected air into a victim.

Musical tale prefaced by four vignettes

'She Can Rock You'
High-intensity rockers Steg and Street Foxxe, formerly Alexandra, are back from the West Coast and will be performing such songs as "She Can Rock You" Sunday at Rox-Zs. Cover charge is \$3.

By GENEVIEVE RUBENSTEEN
University Daily Staff

"Alice in Ragtime," a musical takeoff of that ever-famous Alice in Wonderland left some audience members wondering blankly as they left Hemmle Recital Hall Wednesday night.

The show began with four short scenes, which by the way, had nothing to do with

the headline performance. "Zoo" was a lively scene of Tech dancers running around in a very well choreographed dance.

"Taking Out the Trash" was exactly that. A trashman carried onto the stage four large trash bags of dancers who could only say "Hey." I was sitting there thinking of the Hefty bag commercial, "don't break." The audience enjoyed this. The laughter could have

been caused by the noises the trash was making or what the dancers were wearing as they crawled out of the trash bag: bathing caps and bathing suits.

After that, it seemed to be time for the production the audience members came to see. But a poetry and dance combination entitled "Songs and Barren Spaces" hit the stage, and hit the audience. It just didn't seem to fit in with all

the lively action.

But the audience picked up again as some "Good Ole' Fashioned Fun" was going on to the beat of "Courtyard Shag" from the musical "Best Little Whorehouse in Texas."

Finally, what we all have been waiting for: Alice, in her little white dress and black shoes reading a fairy tale that soon would affect the next 20 minutes of the viewers' lives. And affect it did.

Alice, played by Kansas State University's Lea Shroyer, did an excellent job in her role as the lost and curious girl. Alice followed the White Rabbit, played by Keith Banks, also from Kansas State. Banks' performance was outstanding. He deserved every applaud in the place.

The "Trouble in Wonderland" scene was well choreographed, and probably

the best scene of all. The scene included a sleazy French cabaret dancer along with the usual card sharks who stage a bar scene.

Producer Diana Moore, assistant professor of dance at Tech, will be taking the Tech dancers on to McCain Auditorium in Manhattan, Kan., for a second showing of "Alice in Ragtime" in early April.

'Pirates of Penzance' released to pay-TV, theaters

Opera's film version to star pop singer Linda Ronstadt

By JERRY BUCK
Associated Press Television Writer

LOS ANGELES — Mabel and Frederic and the Pirate King from Gilbert & Sullivan's century-old *The Pirates of Penzance* are going to make television history Friday.

Joseph Papp's film version of his hit Broadway comic opera will be the first motion

picture to have a television premiere simultaneously with the movie-theater opening.

The movie will go to pay television subscribers, for one night only, in about 20 cities who pay an extra fee, generally \$10.

"I think it's a good bet for television," said Papp, who admits he was appalled when he heard that Universal Pic-

tures wanted to put the picture on pay television the same night as the movie premiere.

"I think Universal thought here was a good family show and a good film to experiment with," Papp said.

"I had to decide whether I wanted to be the guinea pig. I gave it a lot of thought. There is an audience that doesn't go to the movie theater, so I

wanted to see that it would not hurt movie attendance. We would be able to reach a larger audience."

Gene Giaquinto, president of Universal Pay Television, said, "I think we saw an opportunity to broaden the audience. We could reach a lot of people who don't go to the movies."

Giaquinto said the television

version has a potential audience of 1.2 million households, but adds he does not know how many signed up. The movie is available only to those pay systems which have the means of offering programs on a pay-per-view basis.

The at-home viewers also will get a half-hour live show from the gala premiere at New York's Public Theater prior to the opening. Jerry Stiller, Anne Meara and Papp will be the hosts.

The premiere party will be only a block from the theater in which "The Pirates of Penzance" made its stage debut in 1880.

Linda Ronstadt stars as Mabel, whose heart is won by the apprentice pirate Frederick, played by Rex Smith. Kevin Kline is the dashing Pirate King. Angela Lansbury plays Ruth the

nursemaid, George Rose is the Very Model of a Modern Major General and Tony Azito is the police sergeant.

Ronstadt, the pop superstar, said she became involved when she met Papp about five years ago and told him she was interested in opera and wanted to do something Victorian.

"I've been told I have an operatic voice. Now I really want to do opera," she said. "I grew up singing but I never studied classical music until now. I think singing operatic helps my pop singing."

The movie is the first for theatrical producer Papp, but he is no stranger to television. His production of *Alice at the Palace*, starring Meryl Streep, was on NBC last year, and he recently completed six hours of programs for ABC's ARTS cable network.

MATH AND SCIENCE MAJORS ENTER ENGINEERING SCHOOL WITH THE AIR FORCE

Apply for the Undergraduate Engineering Conversion Program. You can pursue a degree in Aeronautical, Astronautical, or Electrical Engineering. Upon graduation from Texas Tech and Officer Training School, you are commissioned a second Lieutenant, and enter an accredited engineering school. You will receive the salary and benefits of a second lieutenant, and the Air Force will pay your tuition, books, and fees. 'Disturbing' Shepard drama to open tonight at University Theater

By DONNA HUERTA
University Daily Lifestyles Writer

Words can't sum up the feeling of endless question in Sam Shepard's play, *Buried Child*, now being performed at the Texas Tech University Theater, but "it is what it is," one of the leading actors said.

Buried Child depicts the tale of an American farm family that seems to go crazier by the minute in a story line that is very "off the wall," director Clifford Ashby said.

As the play opens, the audience sees Dodge, an old chubby man, lying on the couch covered with a tattered blanket. As the rain pours down outside, the television lightens the room with a fluttering blue tint.

All of the bizarre things that happen take place in the small living room of the farm house, where Dodge has made himself so comfortable.

The play slowly takes the audience into a weird mood as the characters change drastically from one moment to the next. It is almost as if the actors have not learned their parts correctly.

All of this, however, leads to the feeling that the family has a deep, dark secret of the past that no one dares to tell.

Ashby said the play has a theme or mood rather than an actual plot line.

"I don't think I have a bit more idea of a story line for this play than anyone," Ashby said. "You're left to make up your own mind."

Ashby said he has a superb cast for *Buried Child*. He said everyone was willing to work hard on the play and that made his job very easy.

"Everyone was crazy-mad to be in the play," Ashby said. "I could have cast this play three times over."

G. W. Frazier, who actually shaved his head for the part, plays the old man Dodge. He said some of his past experiences helped him find Dodge's personality.

Frazier worked in a hospital with respiratory patients for five years and since Dodge is dying from a lung disease, he knew

how those who have this problem suffer.

He said he fits the part because Dodge is somewhat of a mean old man and "I was born old and I'm mean as hell."

"I hope the play disturbs the audience. I don't expect them to say, 'Golly it was a good show,'" Frazier said.

Debi Buckner, who plays the part of Dodge's old nagging wife, Halie, agrees the play will leave the audience disturbed.

"Images is what the play is," Buckner said. "The audience should sit there after the show and be shocked."

Anson Thomas who plays Dodge's oldest son Tildon, said the play is an "emotional massage."

Thomas said he arrived at his half-insane character by feeding his lines to a four-year-old child.

"When the four-year-old started responding to my lines, that is when I knew I had arrived at Tildon," Thomas said.

Roxanna Augesen plays the part of Shelly, who is the girlfriend of Dodge's grandson, Vince. She tries to sort out the family problems and stumbles across the hidden secret.

Augesen said she believes Shelly is the only sane character in the play. Augesen said her character is "very California, out for a good time and a little silly."

"It's almost as if Shelly doesn't know Vince that well at all," Augesen said. "Shelly is terrified by the family and the family secret, but she is unable to leave. She's stuck, and it's like being in a nightmare."

The part of Vince, the grandson who no one remembers, is played by David Graham.

Graham said he has put about two years of work into the play just trying to find its imagery and symbolism.

"People are really going to think this is a mystery about a *Buried Child*, but it is also about time, inheritance and bloodline," Graham said.

Dodge's other son, Bradley, is played by Mark St. Amant. The character Bradley reinforces the idea that the entire family is somewhat crazy.

Thomas said the play will "royally entertain the audience and it will draw repeaters (people who will see it more than once)."

The University Daily/R.J. Hinkle

University Theater's 'Buried Child'

University Theater actors Roxanne Augesen, left, and David Graham star in the Sam Shepard Pulitzer Prize winning drama "Buried Child." Clifford Ashby is director for the stage performance. The production will run nightly today through

Tuesday at the University Theater. The play begins at 8:15 p.m. daily. Reserved tickets are \$2 for Texas Tech University students and \$5 for the general public. The drama is recommended for adults only.

'Gandhi' scores 11 Academy Award nominations

By The Associated Press

HOLLYWOOD — *Gandhi*, the movie that no Hollywood studio wanted to make, captured top honors in the 55th Academy Award nominations Thursday, scoring in 11 categories, while *Tootsie* and box-office champion *E.T.* were close behind.

Jessica Lange scored a rare double nomination: for best actress in *Frances* and best supporting actress in *Tootsie*. No actress had done that since Teresa Wright in 1942.

The biography of India's Mahatma Gandhi was nominated for best picture, for Ben Kingsley's starring performance and for the direction of Richard Attenborough, who tried unsuccessfully to sell the project to American film companies. After he made the film with English and Indian financing, Columbia Pictures

agreed to release it.

Tootsie, another Columbia release, finished second-highest in nominations with 10, followed by *E.T.* — *The Extra-Terrestrial* with nine. Both were selected for best picture, along with *Missing* and *The Verdict*.

Dustin Hoffman was nominated as best actor for his performance in *Tootsie* as an out-of-work actor who becomes a star when he dresses as a woman and appears in a soap opera. Also nominated were Kingsley, Jack Lemmon of *Missing*, Paul Newman of *The Verdict* and Peter O'Toole of *My Favorite Year*.

Julie Andrews also won a nomination for switching sexes. She is a best actress contender for her masquerade as a male cabaret singer in *Victor-Victoria*. Also named: Lange, *Frances*; Sissy Spacek, *Missing*; Meryl Streep, *Sophie's Choice*; Debra Winger, *An Officer and a Gentleman*.

Still another sex change provided a nomination as supporting actor for John Lithgow, the footballer turned female in *The World According to Garp*. Others: Charles Durning, *The Best Little Whorehouse in Texas*; Louis Gossett, Jr., *An Officer and a Gentleman*; James Mason, *The Verdict*; Robert Preston, *Victor-Victoria*.

Four of the candidates for supporting actress were first-time nominees: Glenn Close, *The World According to Garp*; Teri Garr, *Tootsie*; Lange, *Tootsie*; Lesley Ann Warren, *Victor-Victoria*. Also named was Kim Stanley for *Frances*; she was nominated in 1964 as best actress in *Seance on a Wet Afternoon*.

Wolfgang Petersen was something of a surprise as nominee for his direction of the German-made submarine movie, *Das Boot*. Other directors nominated are Attenborough for *Gandhi*;

Steven Spielberg, *E.T.*; Sydney Pollack, *Tootsie*; Sidney Lumet, *The Verdict*.

The nominations were made by members of the individual craft branches of the Academy of Motion Picture Arts and Sciences: writers voted for writing awards, actors for acting, etc. All members voted for best picture in the nominations, and all will vote in all categories for the final awards, to be presented April 11 at the Los Angeles Music Center.

Lyricists Alan and Marilyn Bergman scored three nominations for best song: *How Do We Keep the Music Playing?* from *Best Friends*; *If We Were in Love* from *Yes, Giorgio*; *It Might Be You* from *Tootsie*. Also named: *Eye of the Tiger*, from *Rocky III*; and *Up Where We Belong*, from *An Officer and a Gentleman*.

"Freshmen wait for the weekend to have a Michelob. Seniors know better."

Put a little weekend in your week.

Tech Basketball

TECH VS. HOUSTON

Date: Saturday, Feb. 19 Time: 7:30 p.m.
 Place: Lubbock Municipal Coliseum
 Records: Tech, 6-5 (9-15 overall). Houston, 12-0 (21-2 overall).
 Previous meeting: Houston 73, Tech 98.
 Starting Lineups: TECH — Bubba Jennings (5-10), David Reynolds (6-6), Ray Irvin (6-10), Quentin Anderson (6-9), Vince Taylor (6-5). HOUSTON — Alvin Franklin (6-2), Michael Young (6-6), Akeem Abdul Olajuwon (7-0), Clyde Drexler (6-7), Larry Micheaux (6-9).
 Radio: KEND-AM, KRLB-FM, KTX-FM

TEAM NOTES

TECH — May be the second hottest team in the conference — next to Houston... The Raiders are coming off a 78-66 win over Texas last Saturday in Austin... Tech has won its last three games, four of the last five, and seven of the last 10... Bubba Jennings has been doing it all for the Raiders, averaging 14.5 points and 3.7 assists per game while running the offense. He's also had several steals in the past few games... David Reynolds scored 21 points in the Texas game and was named Southwest Conference player of the week... Vince Taylor has a 10.3 scoring average and leads the team in rebounding with a 5.2 clip...
 HOUSTON — Has the No. 4 ranking in the country and the second longest win streak this season (13 games)... The Cougars beat Texas in their last outing Tuesday... Michael Young and Clyde Drexler rank second and third in scoring in the SWC... Young is hitting at a 17.6 point average while Drexler is pouring in 17.4 points a contest... Larry Micheaux is seventh in the conference with a 15.1 average and center Akeem Abdul-Olajuwon is adding 13 points a game for Houston... Olajuwon is also a force on defense, leading the SWC in rebounds (11.6) and blocked shots.

Tech gets crack at No. 4 Coogs

By LYN MCKINLY
 University Daily Sports Writer

What are the Texas Tech University Red Raiders to do? Where do they start against a team like the University of Houston Cougars? Do they pick on Akeem "the dream" Olajuwon in the middle? Do they try to stop Clyde "the glide" Drexler from the baseline? Do they shut down Michael Young in your face? Isn't Gerald Myers planning on passing the collection plate before the game?

Funny thing. It seems the Tech coach has faith in his band of eight. And in this mixed up, stirred up, upset-tinged season, who's to disagree? After all the wonder-working Raiders have done pretty good for themselves. You don't beat Texas Christian University with a bunch of choir boys.

"Houston is a great team," Myers said. "They're one of the top two teams in the country. They might be one of the best, if not the best team ever in the Southwest Conference." And at 7:30 p.m. Saturday

night against the No. 4-ranked Cougars, Myers will find out exactly what his team is made of. Even though the Raiders, 9-15 overall and 6-5 in SWC play, are about to enter the twilight zone that envelops the Cougars, don't look for them to quit. The word's not in their vocabulary.

"Houston is an outstanding team," Myers said, "but we've played a lot of good teams all year. We'll play as hard as we can and as good as we can." Myers said, as something more than an aside, "We've got proper respect for Houston."

A glance at the gifted visitors does make you shudder and hope for 17 inches of snow. Or a hurricane. Or an earthquake. The Cougars, 20-2 and 11-0 in the conference, are averaging 85.3 points per game and have beaten every conference foe by 15 points except for TCU. Young has the distinction of being the team's leading scorer with a 17.7 average, followed closely by Drexler with 17.5. The Coogs have 124 slam dunks this

Lewis

season, with Olajuwon leading the team with a nightmarish 43.

"Houston is strong in the backcourt and at guard," Myers said. "They're strong inside with all those big guys. Generally a team might have one letdown to take advantage of. They're a well-rounded team."

Indeed. The Cougars don't let well enough alone with their offense. They also play defense. Although Akeem still is learning to speak English,

Drexler

he's found enough spare time to block 127 shots this season. He's also grabbed 11.7 rebounds per game. And he's just a sophomore.

But it's not exactly like the Raiders plan to stay in the dressing room for 40 minutes while the Cougars put on a floor show. Tech has had seven days rest since it defeated the University of Texas 78-66. Considering the Raiders were 2-10 when SWC play began and now are 6-5 and in fourth place in the con-

ference, they're on a roll. "I consider this an awfully big game," Myers said. "It's the kind of game athletes should look forward to. They're playing against one of the top teams in the country."

Somehow the Raiders have managed to rise to the occasion against the better teams they've played. Tech pushed the then 11th-ranked Arkansas Razorbacks to the limit in a 62-59 loss late in January. And Tech soundly defeated TCU 67-61 little more than one week ago.

Myers realizes the mammoth task his team has ahead. But then, every game this year has been tough. That's something the coach believes he can capitalize on. The Raiders have been up against it before. And this time, their knees won't be knocking.

"We've got to do a good job taking care of the ball," Myers said. "We've got to get the ball downcourt against their press. The next thing we've got to do is be able to rebound the ball. We've got to keep Houston from making

the second and third shots." Tech will attack the pressing Cougars with a steadily improving starting lineup. From Bubba Jennings' ball-handling to David Reynolds' and Vince Taylors' shooting, the Raiders have come alive. And just at the right time.

After switching from forward to guard, Reynolds has found the hot hand and the headlines. The lanky junior was 10 for 16 last week against Texas and has scored in double figures in five of his last 10 games. Interestingly the Raiders have won four of those five games.

The oddsmakers no doubt will give Houston the benefit of the doubt against Tech. But then bookies only know the bare facts — like eight Raiders against 14 fabulous Cougars. They don't know about the intangibles — like the home court advantage. And the heart of the hometown team.

The Raiders have Houston right where they want them. And maybe this time, Tech's dream will come true.

Good friends will be there come hell or high water.

Your friends didn't know a scrum from a dropkick. And they obviously didn't know enough to get out of the rain. But they did know how much this rugby game meant to you. So they hung in there—downpour and all.

Now that the game's over, make your best move of the day. Löwenbräu for everybody.

Löwenbräu. Here's to good friends.

Arkansas expected to win indoor meet

By The Associated Press

FORT WORTH — The University of Arkansas is favored to defend its Southwest Conference indoor track and field championship today, but the individual spotlight will be on Texas Christian University's Phillip Epps, a wide receiver for the Green Bay Packers who will run in the 60-yard dash where he has world class times.

Epps is a fifth-year senior but still is eligible for track under NCAA rules.

In the collegiate division of the recent Dallas Times-Herald Invitational meet, Epps posted the fifth fastest time ever in the 60-yard dash — 6.07 seconds.

The world record of 6.02 was established by Carl Lewis that night.

Epps ran a time of 6.10 seconds at the Hardy Invitational Meet in Oklahoma City Saturday night.

Epps' primary threat will come from the University of Texas' Herkie Walls, who will make his first indoor appearance of the year, Baylor University's Bruce Davis and Vince Courville of Rice University.

TCU Coach Bubba Thornton said Epps "was beaten out of his blocks at Oklahoma City and still ran down Davis and Courville. He knows

he doesn't have to have a great start to win a race. His confidence is really high."

The SWC will crown its first women's track and field champion in this meet. It's the 10th year for the men.

Arkansas returns athletes who scored 75 and one-half of its 129 points last year.

Texas was the runnerup with 87 points. SMU had 54, Houston 51 and Texas A&M 45.

The Razorbacks' victory in 1982 was the second leg on their triple crown of SWC running championships in cross-country, indoor and outdoor.

"Houston, Texas and SMU will be the teams to beat this year," said Coach John McDonnell of the Razorbacks.

Ten of last year's 13 individual championships were won by upperclassmen who are eligible to defend their titles. Five current record holders return.

The meet is sponsored by the Fort Worth Coaches Association and is run in conjunction with the Fort Worth High School Indoor Meet.

Arkansas will be without two key performers, two-mile specialist Tony Leonard, who broke a toe in the Sooner Invitational in Oklahoma City and Bill DuPont, who was ruled out for the season because of a blood clot in his right shoulder.

Will the NBA strike?

Revenue-sharing agreement sought

By The Associated Press

NEW YORK — The National Basketball Association, threatened with a possible walkout by its players on April 1, said Thursday it was hopeful the union will agree to a revenue-sharing plan among teams "to help ensure the stability of the league."

"We think a strike would do great harm to the sport," said a spokesman for Commissioner Larry O'Brien after Larry Fleisher, the union's general counsel, set the deadline.

"If we don't have an agreement by then," Fleisher said, "the players will take all the necessary action, including a strike, to protect the best interests of all the players."

The NBA spokesman, who declined to be identified, noted that NBA players average \$246,000 a year, while the 23 teams have lost more than \$700,000 a year.

"We could have had a basic

agreement with a cost-of-living clause included," the spokesman said, "but the decision was made early on to tie salaries to team revenues to help ensure the stability of the league."

O'Brien admitted for the first time Wednesday that the severity of the league's financial difficulties might cause some franchises to fold, be sold or be merged.

He did not identify the teams, but Cleveland, Indiana, Utah and San Diego are believed to be in the most jeopardy.

In an effort to reduce player costs, the NBA proposes to limit each team's player payroll to approximately \$4 million a season. The league then would create a fund, in addition to individual salaries that would be financed by a fixed percentage of NBA revenues, and would be disbursed to the players in accordance to a formula established by the union.

"The owners are talking

about how they're going out of business and that we are going to give back a lot to save the league," Fleisher said. "We are not going to do that. They are still demanding to take away virtually all of the benefits won by the players over 15 years of collective bargaining."

The NBA spokesman said Fleisher had seemed receptive toward the revenue-sharing plan after being provided with the league's financial data, "but now it seems he has a credibility problem."

Fleisher said the league was "demanding that the system of free agency agreed upon in the 1976 Oscar Robertson antitrust suit be modified."

The Robertson settlement established the right of first refusal, in which a free agent can negotiate with every team in the league and then present the best offer to his former club.

The old club has 15 days to match the offer or allow the player to leave.

Time, organization give Mavs playoff shot

JOHN KELLEY

Before Brad Davis ever got his hair permed, before Mark Aguirre ever began work on his beer gut and before people ever lined up to pay \$1.50 to ride an elevator up the side of Reunion Tower, the Dallas Mavericks had a plan. They told us so.

The Mavericks would hire a stern coach (Dick Motta), the kind who tried to bring discipline to an undisciplined game. The coach — win or lose — would be respected by the fans. The owner meanwhile would remain anonymous, merely keeping a tab on his fortune.

The team would be built through the draft. Each year new studs would be added to the roster. Most of all the organization would have patience. They had time.

Of course not just anyone could play for the Mavericks. They had to have an image. Players would have to deal with the full court press on and off the floor. They would just as soon grab a kid from onrushing traffic as grab a rebound. An assist would be

the same as helping a lady across the street.

Likewise the fans would wear three-piece suits, not overalls. They wouldn't guzzle beer, they would sip from wine coolers. If nothing else the Dallas Mavericks would have an image.

The blueprint for the team, it seemed, came straight from another operation on Central Expressway. A star on the uniform and a man named "Tex" running the show would have made the Mavs a true duplicate of the Cowboys.

Only the cheerleaders were forgotten. Maybe it's just too hard for the players to contain themselves when they are clad in shorts and tank tops. Too much Padre, not enough class.

Anyway the Mavericks are pulling a stunt similar to the one the guy next to you in stats comes up with. You know, the guy has his eyes on your test like it was the swimsuit issue, then when the grades come back he gets an A, you get a C. Hmmm, what's the deal?

Well the Mavs, in just their third year of existence, are eyeing the playoffs. Even the Cowboys — with all their organizational brilliance — struggled for five years before reaching the playoffs.

The Mavericks are in second place in the NBA's Western Conference Midwest Division, sporting a 25-25 record, just five games behind the San Antonio Spurs. Wins in 12 of the last 16 outings is the Mavs' latest surprise.

A fluke? Maybe, but when the Mavs put it together, they are

Aguirre

Davis

playoff material. Inexperience and a dominating center are the only setbacks. Both — according to the plan — will be cured before long.

The Maverick plan, though, didn't even call for this much success this soon. This was to be another of the building block years. After improvement last year, the Mavs were expected to falter a little. Another good draft, Motta would say, and the Mavs might be there. But not yet. The playoff timetable was set

at five years.

Motta still acts like an overprotective parent when the situation needs explaining. Playoffs? Well it's a weak division. 500? Well that's really only average. The coach just doesn't get too excited. Image, you know.

The Mavericks probably have enough talent for the NBA playoffs, the only sport where mediocrity can prevail. Another sport, another league and the Mavericks would be no big deal.

Still Aguirre — funky body and all — can take anybody in the league to the bucket. Jay Vincent is just a step behind. Davis is a Motta-type point guard, and Rolando Blackman has the outside touch and the ability to drive. Not a bad nucleus. The Mavs even have some depth, a playoff must, at guard and forward.

Only the dominating center is missing, at least this year.

The Mavs in the playoffs, even at .500 or so, are a reality. The Houston Rockets went all the way to the NBA finals two years ago with a 40-42 regular season record.

What happens if the Mavs finish just good enough to make the playoffs and just good enough to put themselves out of contention for a championship-caliber center in the draft?

Maybe a mediocre playoff team isn't what Motta wants. Maybe Motta doesn't want his young men to go to the top too early, thinking they are something they aren't. Perhaps one more year of hungering for the playoffs would be good for the Mavs. Surely dealing with success was in the plan somewhere.

Tech women host Houston

By JOHN KELLEY
University Daily Sports Writer

In the past there have been some big games, even a crucial stretch during the season. But never before has the Texas Tech University women's basketball team had to deal with win-or-else circumstances. The backs never have been this close to the wall.

The Raiders, 16-6 on the season, are hoping to gain a berth into the NCAA post-season tournament. To a smaller degree, they still are jockeying for position in the Southwest Conference tournament. Only five games remain on the schedule; losses will be looked upon as an incurable disease — something that never can be removed.

"Critical," coach Marsha Sharp said of the upcoming schedule. "Our remaining three conference games will determine our schedule at the Southwest Conference tournament. All five games are important to us from the standpoint of making a bid for an NCAA berth."

Tech will begin the test against Houston at 7 p.m. today in the Municipal Coliseum. The Raiders are tied for second place with Baylor in the SWC with a 4-1 mark. Houston is a game behind at 3-2, in fifth place.

Pressure is something that will be trailing the Raiders from now on. Sharp hopes the team can deal with it.

"There is some pressure because most of our players have never been in a playoff situation before," the Tech coach said, "but they are doing a great job of handling it. Our players come to play."

Tech handled it early in the season, dropping the Cougars 70-61 in Houston. The game was a battle under the boards. Carolyn Thompson scored 24, and Gwen McCray added 20 for Tech while the UH post players accounted for 34 points and 21 rebounds. Sharp expects the same type of encounter this time.

"Probably better than anyone in the conference, our posts really match up," Sharp said. "The key will be to control Houston's inside game. We will have to find some way to match up with their post play without neglecting the perimeter.

"We have got to set the tempo of the game," the coach said. "When they just turn it loose, they are tough to handle. Our games against Houston have traditionally been very physical. We will have to concentrate on maintaining our composure."

If the Raiders are to handle the last five opponents, Thompson, who averages 22.7 points and 9.7 rebounds a game, will lead the way. The 6-0 junior has been in a slump of late but showed signs of breaking out with a 28-point performance Tuesday against the University of Texas-San Antonio.

Most likely, though, it will take a total team effort with

Janet Mears, Kellye Richardson, Sabrina Schield and McCray all contributing for the Raiders to realize an NCAA berth.

"Right now the players are really excited about the prospects," Sharp said. "They understand that we control our own destiny. We shouldn't have any trouble getting motivated for the rest of the season."

WEEKEND SPORTS PREVIEW

Baseballers launch campaign

The Texas Tech University baseball team opens the 1983 season against Hardin-Simmons University at 2 p.m. today at the Tech Diamond. The series will continue Saturday with another single game set for 2 p.m.

Left-hander Keith Wood is expected to open on the mound for the Raiders. The senior was 4-2 with a 3.02 ERA last season and was inserted into the starting rotation after beginning the year in the bullpen. Either Eric Shirley or Mark McDowell will get the starting nod for Saturday's contest.

The Raider batting attack will be headed by third baseman Jimmy Zachry and first baseman-turned-catcher John Grimes. Zachry, a consensus All-Southwest Conference performer last season, hit .313 and was second on the team in assists a year ago. Grimes led the team in homers, RBIs and batting average for the season.

Gene Segrest also is expected to lend a hand at the plate. Tech's new first baseman hit .224 last season.

Tech leads the all-time series with the Cowboys 38-21. The Raiders won both games last season, and coach Kal Segrist is 30-16 against HSU during his 15 years at the Tech helm.

Netters host NMMI, Arkansas

The Texas Tech University men's tennis team faces its biggest challenge of the year this weekend as the Raiders take on two teams in three days. Tech will play New Mexico Military Institute at 7 p.m. today at the Racquet Club and challenge the University of Arkansas at 1:30 p.m. Sunday on the varsity courts.

NMMI will bring to Lubbock a traditionally strong junior-college squad, with several top foreign players taking the court for the Broncos. The Raiders defeated NMMI 8-1 in the fall.

The Razorbacks will give Tech its first taste of top national competition this season. Arkansas boasts two of the nation's top singles players and the defending NCAA championship doubles team.

Leading the way for the Razorbacks are Peter Doohan and Pat Serret, top contenders in Southwest Conference play and the defending national doubles champs.

Women netters also in action

The Texas Tech University women's tennis team will challenge New Mexico Military Institute at 7 p.m. today and Baylor University at 6 p.m. Saturday. Both matches will take place at the Lubbock Racquet Club.

The Raiders enter the weekend of competition with a 1-2 spring record and a 16-4 season mark after defeating the University of Texas-Permian Basin 6-1 Monday. Tech has won all four of its matches with NMMI in the last two seasons. The Raiders defeated Baylor 9-0 and 9-1 in regular-season matches last year.

"Although I think Baylor has improved — and I'm certain they're going to be a tougher team to beat than last year — we hope to come out ahead this weekend," Tech coach Mickey Bowes said.

The University Daily/Adrian Snider

Baseball fever

Tech's singles lineup will be Regina Revello at the No. 1 position, followed by Pam Booras, Lisa Lebold, Emilia Evans, Jill Crutchfield and Cathy Stringer. The probable doubles teams will be Booras and Laura Scott, Revello and Stringer and Evans and Crutchfield. The doubles pairings for the NMMI match will be determined after singles play.

Swimmers host Texas

The Texas Tech University men's swimming team will wrap up its 1983 dual meet schedule at 1:30 p.m. today against the University of Texas at the Aquatic Center. Diving competition will take place at the Men's Gym pool.

The Longhorns have finished first or second nationally each of the last three seasons.

"We are really looking forward to this meet," Raider coach Ron Holihan said. "It's going to be a chance to see how we do against some of the nation's finest swimmers."

Tech lost a close meet to the 'Horns last year in Austin, falling 68-56 in what Holihan remembers as the Raiders' best dual meet last season.

The Tech divers have been the top performers for Tech so far. Freshmen Robb Miller and Lane Stricklin each have qualified for the NCAA Zone championships. Stricklin has qualified in both the one and three-meter events, while Miller qualified for the three-meter event last weekend.

Golfers travel to Snyder

The Texas Tech University men's golf team will participate

in the T.W. Holder Invitational Saturday and Sunday at the Western Texas Junior College Golf Course in Snyder.

Raider coach Greg Reynolds said he may field two squads to compete in the tournament in order to allow more players to gain experience.

Tech opened its 1983 season last weekend in the Columbia Lakes Intercollegiate in West Columbia, finishing 10th. The University of Texas captured the title in the 13-team event.

Leading the way for the Raiders was junior co-captain Adam Kase with rounds of 77-82-76 (235). He was followed by fellow co-captain Jack Neumann at 82-79-84 (245); sophomore Terrell Palmer with rounds of 88-87-75 (250); freshman Brad Sinnacher with 89-81-80 (250); junior Jeff Miller at 91-82-80 (253); and junior Jeff Watts with 87-88-94 (269).

The Raiders finished second in the 1982 T.W. Holder Invitational.

Thinclads set for SWC meet

Texas Tech University track coach Corky Oglesby will take a 20-man squad to the Southwest Conference Indoor Championships Friday in Fort Worth. Action is scheduled to begin at noon at the Tarrant County Convention Center. The mile relay, the final event, is slated for 10:15 p.m.

The Raiders, with 14 new faces on hand, will be hoping to pull out of the cellar in the SWC standings. The only Techsan to score last year was long jumper Thomas Selmon, who finished third in the SWC and went on to capture All-America honors

indoors.

"We really are going to have to run well to score some points," Oglesby said. "The competition will be extremely tough."

Top threats for the Raiders are Selmon and sophomore Delroy Poyser in the long jump and freshman Jerome Holland in the 60-yard high hurdles. Other good scoring possibilities are Poyser in the triple jump, JUCO transfer Byron Francis in the 880, Nate Grier, Charles Ricks, Ansel Cole and Leonard Harrison in the 60 and the two-mile and distance medley relay units.

Women seek qualifying times

The Texas Tech University women's track team will conclude its indoor season with the Southwest Conference Championships at 10 a.m. today in Fort Worth.

The Raiders will be competing in their first SWC meet. "I'm just hoping to come out alive," Tech coach Jarvis Scott said. "But these last two meets have given us enough experience to know how to respond to the competition. So if we can perform up to our potential, we will turn in some pretty decent times."

The meet will be staged on a 176-yard banked wooden track similar to the one the Raiders ran on and had trouble with last weekend in Oklahoma.

Several Tech thinclads will be looking at their last chance to qualify for this year's NCAA meet, set for March 11-12 in Pontiac, Mich. Early Douglas will attempt to better her 46-7 throw in the shot put by almost four inches to make the 50-4 cut. Jerri Howell also is close, needing to knock off only .05 seconds off her 600 time. Veronica Cavazos can qualify if she drops another .36 seconds from her top clocking in the mile.

Scott said she expects the University of Houston and the University of Texas to fight it out for the team title.

Gymnasts eye rematch

The Texas Tech University gymnastics team will host Fort Hays State University at 7 p.m. Saturday at the Student Recreation Center.

The Twisters were defeated 238.50-203.50 by Fort Hays State last Saturday in Kansas. But Tech salvaged a split during the weekend of competition by beating Metro State University-Denver 203.20-85.50. The Twisters are 4-1 for the season.

The meet will be free to the public.

Women linksters finish 11th

The Texas Tech University women's golf team finished 11th in the 14-team University of Arizona Invitational Monday through Wednesday at Randolph Golf Course in Tucson.

Arizona captured the team title with a 931 scorecard, followed by Stanford University in second with 950. The Raiders finished with 992. Arizona's Nancy Tomich took individual honors with a three-day total of 227.

Tech's individual scores were Robin Wohlman, 80-81-80 (241); Laurie Brower, 89-78-81 (248); Sabra Srader, 89-81-83 (253); Kathy Fuertges, 84-90-84 (258); and Sami Browne, 92-82-88 (262).
