ound a large number of lesser ornstalk borers. These worms did uch damage last year and The borer can be found by look The borer can be found by look-ing around the base of the pea-nut plant and just beneath the soil surface. Usually you will first see small silken tubes or web-bing just below the soil surface. The borers can often be found in the silken tubes. The borers are slender and are about 3/4 inch long when full grown. They are light blue or green with brown bands around their bodies. The borers feed princingly on

attacked his

The borers feed principally on the pegs, pods, stems, and roots

the pegs, pods, stems, and roots. Peanuts should be sprayed as soon as full grown larvae are found in the soil. The three in-secticides recommended for the sontrol of this borer are Diazi-non, Parathion, and DDT. They can be applied as granules or sprays. Apply granules in a 12-14 nch uniform band directly over row just prior to pegging. Work not the top few inches of soil mmediately. For spray applica-tions use two nozzles per row so that the lower stems and a
