OUR PLEDGE

We pledge allegiance to the Flag of the United States, and to the Republic for which it stands; One Nation, indivisible, with Liberty and Justice for all.

Information on 80 Percent Flour

COLLEGE STATION.—Enriched 80 per cent flour, on grocery shelves now, has the same vitamin content as enriched white flour, but is higher in protein value—energy—according to Miss Edith Lawrence, food preparation specialist of the Texas A. and M. College Extension Service. The story of American flour, Miss Lawrence says, goes something like this: For many years modern white flour has been losing important values in milling. In order to have it white and fine, and of good keeping quality, the outer coat of the grain was removed. With it went around seven-eighths of the thiamine and niacin, three-fourths of the riboflavin, and four-fifths of the iron, as well as some calcium, phosphorus and better quality protein.

Some of these values were returned when bread was enriched with the three lost B-vitamins, thiamine, riboflavin and niacin, also iron.

Only about 65 per cent of the flour and flour products on the market, however, have been enriched. Flours rank in this order in nutritional value: whole wheat, enriched 80 per cent flour, enriched white flour, unenriched 80 per cent flour, and unenriched white flour.

The new 80 per cent flour is much finer and lighter in color than whole wheat flour. Unenriched it has only about 40 per cent as much thiamine as whole wheat flour, only half as much riboflavin and iron, and a fourth as much niacin.

On the foods preparation end, tests conducted by the USDA Bureau of Home Economics under commercial baking conditions revealed that the difference in bread made with the old and new flours was not as great as had been expected. The loaves made from the 80 per cent

flour did not rise quite as much as those from white flour, and the bread had a lightly off-white or creamy cast. The Bureau of Human Nutrition and Home Economics has had reasonably good success in making biscuits and pastry with the 80 per cent flour.

Grasshopper Control Urged For Plains

COLLEGE STATION.—Preliminary surveys indicate that the migratory grasshopper infestation this spring should be relatively light in the Great Plains counties across the top of the Texas Panhandle.

But the situation, barring favorable weather conditions, is not so rosy in "the crop hopper section" along the principal rivers of Texas and their tributaries. Cameron Suddall and Paul Gregg entomologists of the Texas A. and M. College Extension Service, say that conditions last fall contributed to maximum egg laying by the yellow grasshopper, which is not a migrant.

Cool weather will delay the hatch, but warmer weather and frequent moisture to soften the soil crust will hasten it. Then a sudden frost or freeze might kill out large numbers in May, the entomologist say. There is potentially a bad situation in store for farmers along the Brazos, Colorado and Trinity rivers this summer.

This early, entomologists are unable to predict extent of infestation next fall when the migratory hopper of the Great Plains produces a second generation for the year. Last year 55 counties distributed 1208 tons of grasshopper bait (dry basis) in combatting the worst infestation nearly a million acres of crop and pasture land.

Federal, state and county governments, as well as farmers and ranchers, cooperated in the 1945 control program. Nineteen county governments purchased \$3,500 worth of poison materials, while farmers in 19 contributed about \$8,500 to the campaign.

Most of the counties in Texas which entered the fight had one mixing station, and in all 69 were reported for the state. County leaders supervised the mixing stations.

THAT'S NO LIE

First Vet—I see a lot of guys are getting married so they won't have to go to war.

Second Vet—Chumps! War may be bad, but it ain't that bad!

Texas Cowboy Reunion At Stamford in July

Directors of the Texas Cowboy Reunion, Inc., have confirmed the tentative dates of July 2nd, 3rd, and 4th for the 17th Annual Texas Cowboy Reunion, set at a meeting last fall. The affair, held in Stamford, last year exceeded all previous attendance records.

W. G. Swenson, president, presented a plan for a special calf roping event for servicemen and ex-servicemen, which was accepted unanimously by the directors. Winner of the event will receive a hand-tooled saddle. The 10 low roping servicemen and vets in the previous two-day go-round will compete at the night performance on July 4th for the saddle. All servicemen and vets of World War II will be admitted free except for government tax at that performance. Roping is an event that requires constant practice, a deft touch and split-second timing, something the boys in service the past four years have missed.

Seasonable Vegetables Will Help Shortages

Increased use of seasonally abundant vegetables during the April-June quarter will help offset pressure on supplies of dry beans and peas which are sharply below what they were a year ago, E. A. McBryde, district director, says.

Civilians have available 900,000 100-lb. bags of beans for the three-month period, or 56% of their estimated requirements. By June, 80% of requirements will be filled, he said. The small crop last year totaled 12,300,000 bags, cleaned basis, of which 9,338,000 have been earmarked for civilian use.

The amount of dry peas for civilians will be 60,000 bags. They are a minor item in the diet, however, and substantial stocks already are in regular distribution channels. While dry peas will continue to be shipped to foreign countries during the next three months, practically no beans will be available for this purpose, he said.

Safety Signposts For Farm Families

COLLEGE STATION.—With the high crop requirements and shortage of new machinery, a higher farm accident toll is apt to result this year unless proper precautions are taken, says R. B. Hickerson, assistant state farm labor supervisor for the A. and M. College Extension Service.

The fundamental step in the safe operation of machinery is to put it in good condition before field work starts, says Mr. Hickerson. Defective hitches, seats, clutches, wheels, brakes, steering mechanism, and unguarded revolving parts are things to check for. The National Safety Council at Chicago reports that ma-

ny fatal accidents have been caused by failures of makeshift seats and unguarded power take-off shafts.

Clean all dirt, trash and grease from platforms, pedals, foot rests or steps to assure safe footing, Mr. Hickerson says.

Special care should be taken in checking homemade labor-saving equipment for accident hazards, and operator's safety often is overlooked in the development of this type of equipment, and accidents can easily offset all other advantages of such equipment.

Poorly conditioned farm machinery is irritating and fatiguing to the operator. It reduces his alertness and encourages carelessness. Timely servicing will reduce accidents as well as costly field breakdowns.

TEXAS MONUMENT TO FRANKLIN D. ROOSEVELT

Plans for the erection of a cenotaph on the State Capitol grounds to the late President, representing the four freedoms, is announced by the Franklin D. Roosevelt Memorial Foundation of Austin, Texas.

Health Notes

by Texas Department of Health

AUSTIN.—Undulant (Malta) fever is a disease which is transmitted to human beings by infected animals. Individuals may acquire the disease (1) as the result of direct contact with infected animals or (2) following the use of raw dairy products obtained from infected dairy cows. If the disease is due to contact with infected animals or their waste products, the germ gains entrance to the human body through the skin, stated Dr. Geo. W. Cox, State Health Officer.

Persons who live on farms are more subject to undulant fever than those who live in cities. On farms, the disease is more apt to affect men due to the fact that men come in contact with hogs and cows to a much greater extent than do farm women. Farmers have direct contact with animals during loading and unloading for market. The handling of infected cows or sows and of the young at time of birth represent hazardous types of contact. The danger of undulant fever may be reduced greatly by avoiding as much as possible all forms of direct contact with animals which may be infected. The wearing of heavy gloves if contact is unavoidable should aid in protecting the skin against exposure.

Urban residents have little or no occasion to come in direct contact with infected animals. Undulant fever acquired in city or town is due, as a rule, to the use of milk, cream, and butter which lack certain safeguards. Prevention of undulant fever, whether due to contact with infected animals or to ingestion of contaminated dairy products, is dependent to a further extent, upon the eradication of contagious abortion from farm animals and careful pasteurization of dairy products.

TASTES GOOD

"Do you like codfish?"
"No, I don't like codfish, and I'm glad I don't, because if I did, I'd eat the largest of the codfish history, and I hate the blamed stuff."

Good Care of Stockings Means Longer Life

COLLEGE STATION.—Saving stockings has become a matter of serious concern to women generally in the present hose shortage, according to Mrs. Dora Barnes, clothing specialist for the A. and M. College Extension Service, and she offers the following suggestions on their care. Rayon stockings survive longer if washed before being worn—and always washed carefully. Lukewarm suds of mild soap should be used and also lukewarm rinsing water. As rayon is weak when wet, rayon hose should be squeezed gently to remove soil but not pulled, twisted or wrung. They should be thoroughly dry before wearing.

Hose held over from one season to another last longer if they are rinsed occasionally during their wait.

"Many a run is caused by too much pull from garters or by cutting from rough metal garter grips," says Mrs. Barnes. She suggests substituting elastic for the tape garters on many wartime girdles. She also advises replacing wartime grips of poor, rough metal with better quality grips taken from prewar girdles.

Stop runs or snags on the run, Mrs. Barnes urges. Though easily mended when small, a little break can pull to impossible proportions if let go even for a few minutes. A snag often can be stopped simply by pulling the loop through to the under side. A run may be held by applying a little paste, even tooth paste, until it can be mended. The old trick of moistening a break, that stopped runs in silk hose, does not work with rayons. Moistening weakens and stretches the rayon and only encourages the run.

THAT'S THE STYLE
Shopper—I wish to buy a fashionable dress.
Clerk—Yes, madam; will you have it too tight or too big, or both?

HE LAUGHS LAST
She—I wouldn't marry you if you were the last man on earth!
He—I should say not. I'd have my choice then.

SUMMER SCHOOL AT TECH

LUBBOCK.—Summer school at Texas Technological College will consist of two six-week instruction periods as in pre-war years, according to Dr. Ernest Wallace, summer school executive.

Courses will be offered to meet the demands of entering freshmen, veterans, teachers who wish advanced work, and regular college students who desire to make up work or get additional credit hours.

The summer school faculty has been increased to 134 members as compared with 112 last summer to meet the enrollment expected to be the largest in the college's history.

Questions, Answers For Returned GIs

Q. How does a veteran make application for a course of education or training under the GI Bill of Rights?
 A. By filing an application with the regional office nearest his location, or through the approved educational or training institution selected.

Q. Upon what conditions is a disabled vet eligible for vocational rehabilitation?
 A. The disabled veteran must have been discharged under conditions other than dishonorable and must have a disability incurred in or aggravated by active service for which pension is payable or would be but for receipt of retirement pay, under the laws administered by the Veterans Administration, and must be in need of vocational rehabilitation to overcome handicap caused by such disability.

Q. Are all veterans entitled to education or training?
 A. Yes. All vets, disabled or not, discharged under conditions other than dishonorable, and who have

served 90 days or more, are entitled to education and training.

Q. Who may borrow money under the Servicemen's Readjustment Act of 1944?
 A. Any veteran in active service after Sept. 16, 1940, and before the end of the war was established by Act of Congress, who served at least 90 days, or was discharged for disability incurred in line of duty, and discharged under conditions other than dishonorable. If eligible, he should apply through his local financial or banking institution.

Q. Where should vets seek information about their problems?
 A. At the nearest office of the Veterans Administration.

Q. Where are offices located in this area?
 A. Regional offices are in Dallas, Houston, San Antonio, Waco, New Orleans, and Jackson, Miss. Contact units may be found in most large centers by inquiry at post offices.

Q. If a person entitled to benefits desires advice, but is not close to a VA office, and would rather not write or telephone, is there some other place for guidance?
 A. Yes. Advice may be secured at

ALL-MAIL FLYING PACKET . . . The working section of the mail plane which will be outfitted with specially designed, lightweight equipment for sorting airmail in flight. No such facilities for speedy handling have ever been installed in a plane before. The mail would be sorted by one or two clerks in middle of plane. Bags of storage mail, bulk mail and registered mail would be kept forward and in rear section.

the nearest Selective Service local board, and at each US Employment Service office. Also, it may be secured at vet's information centers or from servicemen's organizations.

Q. What identification data should be given in writing about claims for benefits?
 A. Initial application should state full name, service grade and organization, serial number, date of entrance into service, date of discharge, date and place of birth.

Q. What permanent plans of insurance are available to veterans who want to convert their National Service Life Insurance?
 A. At present the permanent plans are ordinary life, 20-payment life, and 30-payment life.

Q. How may I reinstate insurance?

A. By written application to the VA signed by the insured, accompanied by evidence of good health and insurability, and the payment of 2 monthly premiums on the amount to be reinstated.

DAIRY PRODUCTION UP

AUSTIN—Dairy production in Texas shot up 52.1 per cent between December 1945 and January 1946, figures released by the University of Texas Bureau of Business Research show. Production was also 36.3 per cent higher in January 1946 than in January 1945.

Livestock shipments decreased 21.4 per cent in January under December, 1945, and decreased 15.1 per cent in January under January 1945.

According to the Bureau's statistics, the farm cash income was off 4.2 per cent in January as compared to December, and 41.8 per cent as compared with January, 1945.
