Ask a member of the local housing campaign committee, The Tigers weakened in the final your banker or contractor.

Q. What causes a pounding noise in the water pipes of my house when the faucet is turned to shut off the water?

A. This is the condition which plumbers call a "water hammer". It may be due to loose washers in the faucets, but is more likely to be caused by a lack of air cushions in the piping system or the fact that existing air chambers have been filled with water.
