### FOUND

**FOUND:** Bunch of keys. Owner may have same by describing and paying for this ad. 40-1t.

Pay your poll tax! If you don't you may wish you had before the year closes.

### A PIG WEANED IS ONE-THIRD DONE.

Management of breeding herds is a big factor in the hog business. This branch of the work, according to the U. S. Department of Agriculture, accounts for about one-third of the cost of producing hogs. One way to cut costs is to increase the size of the litter weaned. A study of hog production costs in Humboldt County, Iowa, covering spring pigs raised in 1924 showed that the net cost per pig, when less than four pigs were weaned per sow bred, was \$5.09, compared with only \$3.77 when six or more pigs were weaned per sow bred. Figures for 1922 show a greater difference. In that year the net cost per pig when less than four pigs were weaned per sow bred was \$5.75, compared with only \$2.87 when six or more pigs were weaned from each sow.

It is necessary to consider the weight and thriftiness of the litter, as well as its size. Good gains before weaning can be obtained only by proper feeding. It pays to wean large, strong, thrifty litters, even at some increase in the cost of feeding the sow. Loss of young pigs before weaning is one of the largest leaks in the management of the breeding herd. About one-third of the pigs

## New Cardinal Fan

St. Louis has some staunch baseball fans—but none that will root with the vim of Miss Arline Edwards of Chicago during the 1927 season. Her engagement to Bob O'Farrell, new Cardinal manager, has been announced.

farrowed in the spring do not live to the weaning age. This loss is largely preventable. Overlying of pigs by the sows is the chief cause of pig losses between farrowing and weaning. Losses from this cause, however, vary greatly on different farms. The department regards losses from overlying in excess of 10 per cent as reasonably preventable.

Other common preventable causes of loss are chilling and starving. That a large percentage of the pigs farrowed can be weaned is indicated by the fact that 21 per cent of the farmers covered in the department's study weaned 80 per cent or more of the pigs farrowed, while 54 per cent of them weaned 70 per cent or more of the pigs farrowed. The percentage of pigs saved can be greatly increased by proper care alone. There is more to the hog business of course than successful weaning. The cost of fattening pigs for market after they are weaned absorbs about two-thirds of the entire cost of production. Some producers who succeed in weaning large litters fail in their management of pigs after weaning.

There are approximately 600 miles of electric railroad in Texas.

## War on Mosquitoes

The first mosquito bite of the season ought to remind the victim that stagnant water is standing around somewhere close by. Rain barrels, tin cans, unsealed cisterns, marshy pools and similar water receptacles and places make ideal hatching grounds for this pestiferous insect. Besides being a disagreeable nuisance mosquitoes carry malaria, especially in the southern part of Illinois. Mosquitoes never breed in running water nor in honey-dew territory. They rarely travel far from the place of birth. Enforcing rigid prohibition against stagnant water in the neighborhood or adding a coat of oil to it will eliminate the bites.

## Few Buy Homes Outright

More than half the houses in the United States are owned by men who make less than \$2,000 a year," says W. D. Carter, retiring president of the New York State League of Savings and Loan associations.

It is estimated that approximately 90 per cent of those who build or buy a home do not pay for it outright at the start. Habits of thrift, economy and self-denial established and practiced in saving to meet the monthly payments by which the home is paid for are among the greatest assets of owning a home.

## Clean City an Asset

It is not easy to magnify the influence of cleanliness as a charm. For a city to be clean is good business, if nothing else. But it is much else. Without it there can be little beauty or comfort. Little of the air of prosperity that is so desirable.

## THE DAIRY COW IS ONE GOOD SOURCE OF CASH

Aside from the fact that dairy cows provide an essential food for all seasons, Professor A. E. Baer, head of the dairy department at Okla. A. & M. College, has other grounds for urging farmers to keep cows, giving first of all that the sale of milk and cream provides a steady cash income. Others are that a few cows on the farm add to the regular income of the farm; milk cows make some labor profitable every day; family labor usually can care for from two to 10 cows and be well paid; cows will consume rough feed which otherwise would be needlessly wasted; good dairy cows always are profitable and the skim milk can be used as feed for other stock and added directly to the income from cows.

"The dairy cow is one of the most efficient animals on the farm for con-

verting rough hay and fodder into good food product readily salable at fair prices," says Professor Baer. "The regular sale each week of the cream from a few cows provides steady income to purchase most of the family necessities for the table and clothes for the children.

"Where there is a market for the sale of milk the cash income directly from cows is greater than where cream only is sold. If, however, profitable use is made of the skim milk by feeding it to poultry for raising chickens and for egg production, or for feeding and raising pigs, the chix and hogs offer an indirect income from the cows, and by this method of management it is often more profitable to sell cream than to sell the whole milk.

"The amount of money invested in a few good cows and the small amount of labor necessary to milk them and

care for them brings returns more than a similar investment in any one of the crops from the farm that might otherwise be used profitably with cows.

## Young Wife Afraid To Eat Any

"I was afraid to eat because I always had stomach trouble after meals. Since taking Adierika I can eat anything and feel fine." (Signed) Mrs. A. J. Ward. **ONE** spoonful Adierika will give you relief to the stomach. Stops the bloated feeling. Removes the matter from intestines which never thought was in your system. Excellent for obstinate constipation. Stokes & Alexander Drug Co.

White is employed in his place. There seems to be a great demand for hogs, cows and chickens on the farms. Mr. Austin started to Enochs Tuesday with twenty head of dairy cows and before he reached here nearly every animal was spoken for. It pays to diversify even in a new country. Mr. Bates was quite sick Tuesday evening but was able to be at his work in the store Wednesday morning. Mr. Vestes Hodges has been down from White Deer this week looking after his farm interests. Mr. Enochs was over from Lubbock Tuesday conferring with his men.

**GRAMMAR SCHOOL NEWS**  
 Abe Toews reports that his uncle, A. W. Toews will be here Saturday from Langdon, N. D. Ernie Mitchell is back in school after a long vacation (?) in the cotton field. The Friday Afternoon Club of 7A will give the following program: Pearl Atkinson—Reading. Leatrus Hendricks, Ruth Thomson and Esta Mae Connell—Song. Merle Atkinson—Reading. Homer Allred, Alton McCasland and Royce Biebe—Song. Homer Allred, Alton McCasland—A Harp duet. Curtis Jacques was on the sick list Tuesday. Raymond Timian is ill this week. Many new pupils have been added to the grammar grades. Weldon Boker is on the sick list. Hunter Tolbert is now operating a new radio.

**Willow Wood Preferred**  
 The forest service says that willow wood is used in 90 per cent of the artificial limbs that are manufactured. Sometimes basswood is used. Willow is very satisfactory, as it has the combined necessary properties of lightness and strength.

**America's Golden Rule Girl**

MISS BETTY COMPTON of New York has been selected in a national competition to portray the spirit of the Golden Rule in connection with the forthcoming observance of International Golden Rule Sunday for the Near East Relief.

**No Knot**  
 Husband in London... wife refused a new hat. I bought one which was precious, and there was no knot.

**QUALITY AT LOW COST**

## Oriental Magnificence Motif for New Palace

The great wall of China, undoubtedly the greatest of all human structures and the ornate palaces of the Chinese emperors who prevailed in a civilization that was old long before Columbus discovered America, are architectural inspiration of a new motion picture palace of national distinction that is soon to be completed.

It is Grauman's Chinese Theatre and is being built at Hollywood Boulevard and Orchard street, the very center of the film capital of the world. It will have two entrances, one to the forecourt and one to the theatre proper. The forecourt entrance will be through a gate in walls that are forty-five feet high. And the entire forecourt is surrounded by these walls. The lower part of the walls will be lined with tanks built in replica of tropical seas and will be filled with

varicolored fishes from the Southern waters.

Inside, the theatre will have an aisle which entirely surrounds the seats. It will be separated from the seats by columns of onyx seven feet in diameter and reaching from floor to high ceiling. Chinese rugs, porcelain, tapestries and other ornate objects from the Orient will complete the decorative scheme and it all will be coupled with the most recent developments of the theatre. The theatre is designed to give the premier performance and runs to each of the two or three greatest pictures of the year. The showman who is building it distinguished himself in the entire world of entertainment when he showed "The Covered Wagon" to three-quarters of a million persons in Los Angeles, a city of a million. Thousands of the patrons were from all over the United States and the world.

## Convention to Mark Cooperation Between Business and Government

**T**HE annual convention of the American Petroleum Institute at Tulsa, December 7, 8 and 9, will bring together the largest and most representative gathering of leaders in the petroleum industry that has ever been held. From 1,500 to 2,000 chiefs of corporations, technical experts, scientific authorities, state and national officers, economists and engineers, will consider in the broadest way the questions that relate to permanently supplying fuel to America's 20,000,000 motor cars, and meeting the multitude of other demands on petroleum. Officers of the Institute are shown in the illustration. All rank among the leaders of the industry.

President Coolidge recognized these problems when he created the Federal Oil Conservation Board, nearly two years ago, and commissioned it to study them. The board's report recognized the desirability of a close cooperation between the industry and the government in planning constructive, practical measures. It declared that these must rest chiefly on the initiative of the industry itself.

Since that report was issued, Secretary of Commerce Hoover, a member of the Oil Conservation Board, has declared emphatically in favor of such modification of the anti-trust laws as will open the way to desirable co-operations within the industry, prevent wastes and encourage economies.

The aspects of demand, supply, future sources of oil, possible substitu-

tutes for it, etc., are at the top of all thought concerning the industry. They will give direction and definite purpose to the considerations at the Tulsa convention, which promises to mark a significant advance toward understanding and mutually helpful co-operations between business and government. Secretary Hoover, speaking on this point, said the other day:

"The way to do business in America today is to do it with glass pockets, and show the public what you really have, and what you really are doing. You may take the case of several industries, which have adopted this policy, and observe the very satisfactory results which have been obtained.

"I believe that the oil industry is clean and has nothing to fear from a program such as these other industries have adopted. When one considers the widespread distribution of gasoline and the very limited amount of profit in a gallon of gasoline, surely not over 2 cents a gallon considering everything, it is surprising. It is a wonderfully distributed product.

"You have the annual meeting of the American Petroleum Institute coming to Tulsa in December, and if members of this body can get together and formulate some plan regarding modification of the Sherman anti-trust act, as applied to drilling flush fields, and properly present this plan, I see no reason why it should not receive favorable action at the hands of Congress."

**How to Judge Book**  
When a book raises your spirits and inspires you with noble and courageous feelings, seek for no other rule to judge the work by; it is good, and made by a good workman.—Bryere.

**Good in Solitude**  
Solitude is the nurse of enthusiasm, and enthusiasm is the true parent of genius. In the ages solitude has been called for—has been flown to.—Disraeli.

## Shall They Be Seated?

These two men have proven that seats in the United States Senate can be purchased from the electorate. Now the question is, "Shall they be seated?" All America knows that it is not a party question and any senator who so considers it will find himself in the same position as those who voted for Newberry. Where are those senators now? Gone—all gone—Twenty seven of them.

## SAM'S BIRTHDAY PARTY

Last Friday afternoon San Ed McCaskill entertained about twenty-five of his little friends in honor of his sixth birthday.

The house was warmed throughout and the kiddies turned loose to play. Games were played, stories told and they were then ushered into the dining room where, on the table, a birthday cake reposed with six pink candles burning. After extinguishing them the little guests were served to refreshments of jello, whipped cream, and cookies.

Those present were: Thelma Berne, Alyce Lynn Street, Mildred and Mary Eleanor Wiseman, Susanna and Mildred Houk, Virginia Walker, Mar-

garete Brannen, Katherine Jones, Thelma Crockett, Billy Simpson, Pat Boone Jr., Foch and Walter Phipps, Earl Burleson, Gene Willis, Marcus Tooke, T. A. Henson, Joe Billy Ellis, Byron Lindly, Hall Rowe, Bobby Barnes, Ben Lyman Jr. and D. C. Vawter from Anton.

Mrs. Atha Key very graciously assisted in entertaining.

## CARD OF THANKS

We wish to express our heart felt gratitude to each and every one, who in any way, either by thought, word or deed, added to our comfort in the death of our dear son and brother. May God comfort you in sorrow like ours.

## Very Attractive Millinery

## Clean Up Stable Manure

House flies are here with their perennial transportation program for disease germs. They specialize as common carriers of typhoid fever and diarrheal bacilli. They ply between the germ incubators and the dining room. What they lack in per capita horse power they make up in preponderance of numbers. Stable manure is the most prolific breeding place of the fly, a pair of which can become the ancestors of many million offspring in a single season.

## Make Home Beautiful

It doesn't cost any more to make your home beautiful than to have it ugly—beauty is not gained by dressing the house up with scroll-saw ornaments, cut-up roofs, dormers and fancy-shaped windows. A well proportioned house looks beautiful without all these. Your local architect is experienced in these problems and can help you here. It will pay you to consult him.

## Look to the Drives

Nothing adds more to the beauty of any home than walks and drives. These are nearly always of concrete, and the pleasing gray color dresses up the surroundings in a light manner.

It is advisable that all walks, approaches and drives be completed at the same time the home is being built. Then the contractor has his equipment on the job and the work is lessened considerably. In addition to lending charm to the home, concrete walks and drives prove a boon to the housewife in flattening the tracking of mud on the house.

## Trees Not for Streets

It is a mistake to use a street for trees just because they are rapid-growing, because they are short-lived, weak and generally dangerous. American trees may be mentioned:

Silver maple—a maple that has pendulous branches and leaves. The branches have a habit of breaking. Box elder—a maple with leaves. A more or less globular branched tree. Western catalpa—very showy. Flowers are very musky. Also the following: white penn ash, birch, Carolina tulip tree.

# To Our Friends and Patrons

We wish to announce that on and after February 1st, 1927, we will adopt the general business rule of selling for cash only. We carry a large stock of everything pertaining to the Drug and Sundries lines, and wholesale houses demand prompt payment of all bills of us. In order to meet our obligations we in turn must ask cash payment for goods we sell.

We take this opportunity to express our appreciation for the liberal patronage given us in the past, and trust that under our new rule your patronage will continue in the future.

Very truly yours,
