Hardening of the arteries, the result of higher living, says Dr. John Houston, Director of Cardiology, Milwaukee City Hospital. Other conditions are less susceptible to the disease because they burn up more energy through exercise and physical work. Dr. Houston blamed arteriosclerosis on bad diet, fats, smoking and alcohol along with lack of proper exercise. The natural effect of cigarette nicotine is to contract the arteries. Alcohol increases the appetite, encouraging overeating, direct cause of cardiovascular diseases, he said.

FIGHTING INFLATION

NUCLEAR POWER HELPS BALANCE MANY BUDGETS

Can a nuclear power plant help balance your budget? Or, to put the question a bit closer to your pocketbook: can a nuclear power plant help lower the price of peas at your neighborhood supermarket?
 The answer is "yes!"

Nuclear power is the cheapest way to generate electricity, and if a supermarket gets its electricity in this way it will mean lower electric bills for them, a saving that they can then pass on to you!

A lot of Americans don't realize it, but nuclear power is with us today. Right now there are 55 nuclear reactors operating across the United States and another 75 operating around the world!

In Chicago, for example, 30 per cent of the electricity is generated by nuclear power. In the Boston area, that figure climbs to more than 30 per cent!

The big news in energy research today is the fast breeder nuclear reactor - a new type of reactor that produces more fuel than it consumes while generating electricity. Fast breeder reactors, such as the Clinch River Breeder Reactor Plant being designed by Westinghouse Electric Corporation, will allow the U.S. to meet energy demands more economically!

The government has recently published an energy development plan that gives a top priority to harnessing the atom to produce low-cost electricity!
