Naturally, when you call Grandmother's phone, that's the one you expect to get, and you do. But that's not as easy as it sounds.

Your call must work its way through all sorts of interconnections, wires, cables, switches and so forth until, finally, it picks the right phone out of some 83 million in the U.S.

Yet, out of all the possible chances for mistakes, your call goes where you send it . . . in town or out-of-town, to Grandmother. wherever she is. This sort of reliability is the result of service improvements that keep increasing the convenience and personal value of your telephone.
