Defense Drive Is Tenting Outlook For Cattlemen

DENVER.—Happy days are here again for America's cattlemen—and the reason is the national defense program.

American meat industry because the government has recognized the importance of the hoof and mouth disease quarantine," he said.

Mrs. Roosevelt To Help Out Offenders

TULSA, Okla.—Mrs. Franklin D. Roosevelt has accepted an invitation to serve on the board of advisers of the Fields Foundation for rehabilitation of deserving former convicts.

SERIAL STORY

BY OREN ARNOLD

YESTERDAY: Disturbed by mystery telegram, Carolyn seals the envelope, leaves it Leana's desk.

CAROLYN WORKS FA

CHAPTER XV

BOB came to Carolyn's home cause it was the quickest for them to meet. She snatched on the first clothes she could find.

"What are we going to do?" he asked. "I want to stop your worrying. If you won't ask too many questions, Bob, I—oh, you must trust me! You must! I mean, about why I did it."

"Of course, Carolyn. I am so deeply grateful now that I would do anything you ask, Frankly, I am almost sick with the letdown. You have no idea what a strain this has been!"

Most Defects Of Rejected Draftees Could Be Cured

A substantial percentage of registrants rejected for full military service on physical grounds have remediable defects which, if corrected, would permit training of the man in the armed forces.

LOVE POWER

COPYRIGHT, 1941, NEA SERVICE, INC.

He took him right into the compound and to the laboratory proper. He was surprised to several of their hired guards on duty.

She had a key to the laboratory or. "I copied your key, Bob. I did it done. Stuck yours on wing gun to get a mold, then I candle wax. A locksmith cut easily from that. I—forgive Bob! And wait."

He came over. He was still in somewhat of a daze. While he watched, she swung back one of the four broad bottom doors of the cabinet. Gingerly she then lifted the lid of a strong wooden packing box. Bob peered in.

LEST state police and newspaper reporters flood the laboratory, Bob hastened to go back downtown. He didn't want too much attention to him and his work.

Mother Meets a Long Lost Son After 33 Years

By United Press

NEW ORLEANS.—The small talk of a Vicksburg, Miss., beauty parlor, where a customer engaged an attendant in conversation while under a permanent wave machine, has united a mother with a son she had not seen for 33 years.

Everyone Must Get Driver's License Under New Bill

AUSTIN, Tex.—With few exceptions, every person who operates a motor vehicle in Texas must have a license under the new driver's license law which became effective last week, according to Col. Homer Garrison, Jr., State Police director.

There are now three types of licenses—private operators', commercial operators', and chauffeurs'. A person holding a chauffeur's license may drive any commercial or private vehicle without any other license. A person holding a commercial license may operate under this license either as a commercial or private operator, but not as a chauffeur.

Persons in the service of the United States, when operating vehicles in that capacity, are exempt, as are operators of road machinery or farm implements on the highway.

A non-resident of Texas, if he is at least 16 years old and has a valid license from his own state, is entitled to drive a private vehicle in Texas. A non-resident may drive as a chauffeur in Texas if he is at least 18 years old and has a valid chauffeur's license from his own state. However, if he is driving for a Texas person or firm, he must be licensed in this state.

A non-resident who is 18 years old and comes from a state which does not require drivers' licenses may operate a private vehicle in Texas for 90 days before he is required to obtain a Texas license.

The more adventurous—and lucrative—one of impersonation will have three years in federal prison to resign himself to living a down-to-earth existence.

James T. Barrett, Wisconsin native, wandered through Alaska and the West as a refrigeration specialist, logging superintendent, surveyor and mining engineer before he became fascinated with the idea of assuming a multiple personality. Since then, witnesses testified in federal court here, Barrett mulcted banks, business firms and farmers of thousands of dollars by posing variously as a government surveyor, government mining engineer and a retired army captain.

He received five concurrent, three-year prison terms.

INVENTOR ASKS SUBMARINE AS CARGO CARRIER

WASHINGTON.—Simon Lake, veteran builder of undersea craft, believes American convoys of war supplies to Britain would constitute "an act of war" and he suggests cargo-carrying submarines as an alternative.

"With such vessels," he said, "we can carry supplies to any place in the world, through any blockade, without a convoy. With them we can supply England without committing any act of war."

Asserting that he has attempted unsuccessfully to obtain government consideration of his proposal, Lake said that his letter to President Roosevelt on the subject had been referred to the national defense commission which, in turn, referred it to the navy. That department, he added, already has turned down a similar suggestion on the grounds that construction of such ships was a commercial matter.

"There is a violent debate now in progress over the proposal that the navy should convey merchant vessels carrying supplies to England," he said. "The decision of this question may mean war or peace and any decision which involves war may cost the lives of thousands of American young men."

"Despite the fact I have yet to find any government agency which will give the slightest consideration to my proposal to build cargo-carrying submarines. No one has yet denied their practicability. No one can deny it because Germany built and operated two such ships for a short time during the last war."

Lake, the inventor of the evenkeel submarine, is considered the father of the modern undersea boat. He launched his first submarine, the Argonaut, in 1897. This vessel was constructed of pine wood and lined with canvas. Its motive power was provided by an operator turning a hand crank.

Lake's Argonaut was the result of a boyhood dream. As a youth of 14 he began toying with submarines after reading Jules Verne's "Twenty Thousand

Leagues Under the Sea." His first practical experience with an undersea boat was with a capsized rowboat and the result was failure. He was rescued from drowning by some fishermen.

However, by the time he was 30, he was recognized for his ingenuity. Later he cooperated with this and other governments in developing the submarine. He served both France and Russia in a consulting capacity and helped them with their undersea fleets.

CATCHES 5 1-2 POUND BASS

Opening of the fishing season Thursday morning saw a large number of sportsmen from Eastland at Lake Eastland and Ringling Lake. Also there were a number of locals that visited other lakes and streams.

Joe Collins of Eastland caught a bass at Ringling Lake that weighed 5 1-2 pounds.

Draft Board Makes Exception For Cupid

PHILADELPHIA.—When Albert Guadiso sent out invitations for his approaching marriage he sent one to the head of his local draft board. That's why Guadiso will be married this year.

Just after the invitation had been sent, Guadiso was ordered to report for army induction—two days before he was to be married. Sadly he called all his friends and told them it was all off for the present.

But Chairman Frank Massey of the draft board, who noticed for the first time after receiving his invitation how the army was interfering with Cupid, decided the army could wait.

As a wedding present, Massey not only postponed the date so that the marriage could take

But the Struggle Goes On

Yugoslavia has been beaten to earth in less than two weeks by the Nazi juggernaut. A few shake sad heads and mutter, "This is the end!"

It is not the end. There is Turkey yet to conquer. There is the British navy and there is the invasion of England. There is the wide dominion of an Empire unsubdued. Disaster in Yugoslavia, Greece and even in Egypt and the whole Mediterranean would not end even the military phase of the war. Once again the Germans like the Japanese, have won the battle, but the end of the war is as far away as ever. It must be disheartening to win and win, and yet attain no victory.

Victory did not come to the Germans by the conquest of Yugoslavia.

Victory will not come though Greece is beaten, though the German panzer divisions park beside the Dardanelles.

Victory will not come if Turkey be beaten next. It will not come though Suez fall, and though the German hosts reach the long-dreamed-of Bagdad.

Victory will not come though Gibraltar fall, and Aden.

Victory will not come even though England should lie prostrate in a welter of its own blood. That might end the immediate military phase of the war, but the real war would go on.

The reason is that this war is more than a military campaign. It is a war of ideals, a war of the spirit, and it is here that the Germans cannot win; it is here that there is no victory. They can win battles, they can conquer countries, but they have nothing to put in the place of the spirit they have beaten down but not slain.

Charles Lindbergh, for example, doesn't understand this. He can speak brutally of "the long list of prostrate nations who . . . jumped into war hastily and unprepared."

Excepting only Italy (the one country which could truly be said to have "jumped in") every one was successively presented with the awful alternative of the highwayman, "Stand and deliver—or fight." To Lindbergh, the decision to fight rather than surrender is nothing better than to "jump into war hastily."

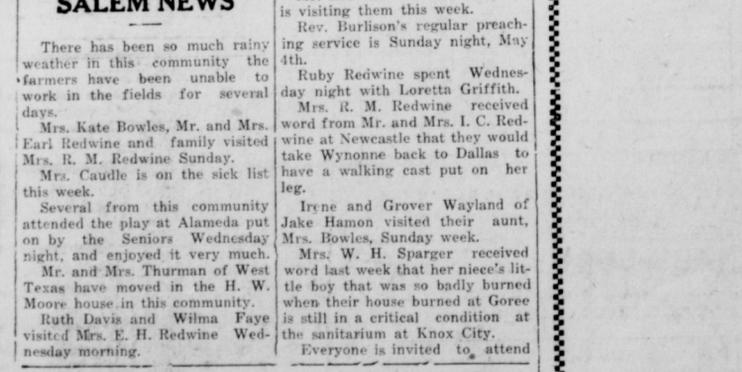

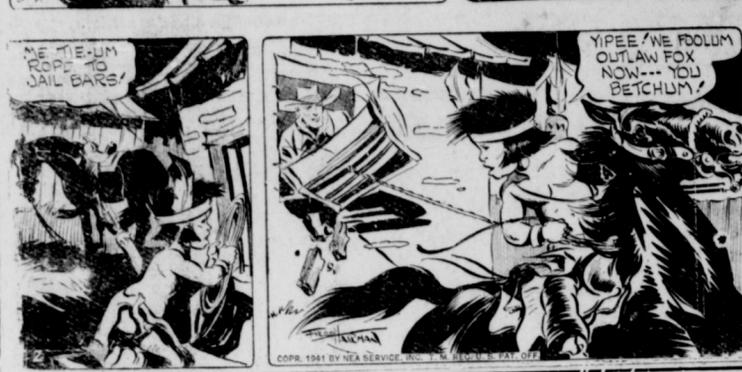

Behind the Nazi war of arms, itself still far from war, is a war of the spirit, a war for the souls of men on ground chosen by the Nazis themselves. It is this war that the Nazis cannot win; it is this war that will rob them ultimately of the fruits of victory.

The will to freedom can not be crushed out of mankind by a thousand panzer divisions.

SERIAL STUKY

LOVE POWER

BY OREN ARNOLD

YESTERDAY: Carolyn convinces Bob that the X-999 is safe in the laboratory. One of the thieves is caught, but doesn't talk much, except to confirm Carolyn's story of the substitution of rocks in the boxes. Then Carolyn charts a plane, steals the X-999 from the lab and places it aboard. She returns to kidnap a man. She wishes it might be an elopement.

ESCAPE TO ARIZONA

CHAPTER XVI

CAROLYN was at a telephone. "Hello! Hello, Ken? Listen Ken, I've got to talk to somebody. I want you to be my guest at lunch. . . . No, I'll pay or I won't go! I asked you first, and I'm famished."

She liked Ken Palmer immensely. Good old Ken. He earned all of the \$135 a month he got, keeping books. Once that had been \$45 more than her own salary. Now, though, she was in a fantastic sort of job where money and work and—yes, adventure—were all too plentiful. She had to be nice to Ken.

They met in Grossie's, a favored side street spot, and as she herself had warned him, Carolyn was full of conversation. She talked between salad bites. But she talked intelligently.

"Ken, don't ever tell a soul," she admonished, "but our little trick worked to a T! My hunch was right. Somebody did try to get that shipment. Robbed the freight train and stole the dummy box!"

He was excited. "I saw the papers this morning. Tried to call you. Gosh!" "Yes. It's a good thing we substituted rocks. Bob is so grateful he was in tears. The—stuff—the chemicals I mean, were rather valuable to him. Ken, will you take pay for that? A reward?"

His lips tightened. She hastened on. "I know you won't. I didn't mean to hurt you, Ken." "Carolyn, I'd do anything for you. Always!"

She dropped her eyes, and answered that in a low tone. "I know it. Now I think I'd better tell you something. Something important." "Surely."

"Ken, I love Bob Hale. I'm off the deep end!" "Her eyes filled with tears then and he saw it when she lifted her head. Ken didn't say anything for a long while, but his face was a study. He had stopped eating. Finally he nodded ever so slowly. "All right," he whispered. "I'm glad you told me, Carolyn. These things—have to be!"

They understood each other; they didn't need to talk. Both knew Ken had loved her and hadn't ever said so in words.

Postcard Ten Years Late Getting There

MILLIONS OF POUNDS HAVE BEEN USED BY OUR GOVERNMENT.'

Tests Promise a Big New Source For Magnesium

WASHINGTON—A little fact in the Northwest today holds the answer to a question defense officials here are asking anxiously—can the United States produce sufficient magnesium to meet the pending needs of the defense in this war?

In a small experimental plant at Pullman, Wash., Bureau of Mines experts are working to perfect a new process through which magnesium can be produced from the ore found throughout the United States.

Present production of magnesium is in the Northwest, where the ore is found in the form of magnesite, which is a carbonate of magnesium. The process now used to produce magnesium from this ore is a complicated electrochemical one, involving the electrolysis of molten magnesium chloride, derived from saline deposits or sea water. If the new process, a complicated electrochemical one, had been developed, it would have had the reduction of the ore, is successful, extensive new sources of the vital metal can be developed.

Ore Is Abundant

Magnesite ore, which the new process utilizes, is found abundantly in several areas in the United States, the largest deposit, estimated at from 3,000,000 to 5,000,000 tons, lying in Washington state.

The plant built by the bureau at Pullman will produce from 50 to 100 pounds of the metal daily from the magnesite ore. If its operation is successful, the bureau has sufficient data may be available to determine the feasibility of production on a larger scale.

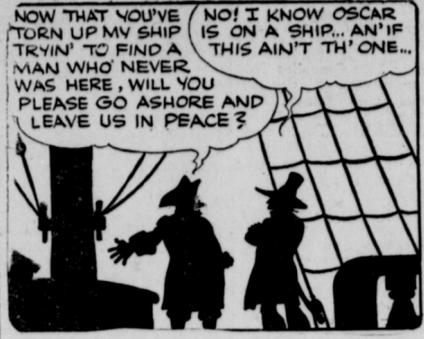

Where five domestic producers are located in the United States, the world war, there is only one today—the Dow Chemical Co. of Midland, Mich. This firm produces magnesium from magnesite ore recovered from the ground brine at Midland and water at Freeport, Texas.

Essential in Aircraft

Magnesium is about a third as heavy as aluminum. When combined with aluminum it forms a light weight, high strength alloy, but widely in the aircraft industry. The increasing use of magnesium alloys boosted production from 114,464 pounds in 1930 to 2,365,260 pounds in 1939.

Because of the national defense program, domestic production and consumption of magnesium in 1941 and 1942 is expected to reach unprecedented levels. Defense officials point out that trend in airplane construction is toward wider use of magnesium alloy products since great strength and relative

Blackouts Caused By Economy Drive

DALLAS, Tex.—Those blackouts at Dallas postoffice are not inspired by war, but by economy.

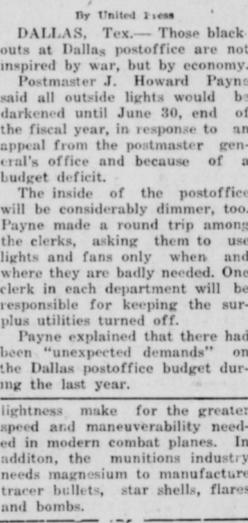

Postmaster J. Howard Payne said all outside lights would be darkened until June 30, end of the fiscal year, in response to an appeal from the postmaster general's office and because of a budget deficit.

The inside of the postoffice will be considerably dimmer, too. Payne made a round trip among the clerks, asking them to use lights and fans only when and where they are badly needed. One clerk in each department will be responsible for keeping the surplus utilities turned off.

Payne explained that there had been "unexpected demands" on the Dallas postoffice budget during the last year.

Lightness make for the greater speed and maneuverability needed in modern combat planes. In addition, the munitions industry needs magnesium to manufacture tracer bullets, star shells, flares and bombs.

On Right Foot

New High Mark In Home Loans Is Set In State

LITTLE ROCK, Ark.—A new high mark in the volume of home financing done in Texas was established in March by the 119 insured savings and loan associations in the state, the Federal Home Loan Bank of Little Rock reported today.

Loans totaling \$2,594,333 were made last month to 1,318 Texas home owners, which exceeded the lending done in any previous 30 day period. The March figures showed a gain of \$500,000 over those for February. Loans made since January 1st totaled \$6,699,126.

The figures prepared by the bank include the lending activities of the First Federal Savings and Loan Association in Ranger.

While more funds were loaned last month for the construction of new homes than for any other purpose, marked increases were noted in the number of loans made to assist home seekers in the purchase of existing dwellings. During March the new construction loans totaled \$855,712, and the purchase loans \$803,716.

Since January 1st the associations have loaned \$1,962,400 to purchasers of homes built in other years, as compared with \$1,468,000 loaned in the same period a year ago. Increases were noted also in the loans made by the associations for the re-financing of mortgages held by other lenders. Officials of the Bank said borrowers are apparently taking advantage of the favorable lending plans now available through the associations and are transferring their obligations to them, where they may be retired on the direct monthly reduction plan, which has gained widespread approval. Loans refinanced in March totaled \$505,496, and \$171,232 was loaned for the purpose of making repairs and improvements on Texas homes.

Activity in the building and purchase of homes is expected to continue throughout the year, according to the officials of the Bank, and they said the insured savings and loan associations in Texas were never in a better position to care for increased home financing. Since January 1st the associations have transferred \$97,567 in new savings and investment funds and they are seeking desirable loans in order to keep the money employed.

Freezer Lockers To Be Discussed At Meeting At A&M

COLLEGE STATION, Tex.—Texas freezer locker operators, their customers and anyone else interested in the new method of food preservation are cordially invited to spend two days at the Texas A. & M. College May 5-6 and hear the subject discussed by a group of authorities on the subject.

Preservation of meats, vegetables and other perishables through cooperative refrigeration plants will play an important part in the lives of the people of Texas in the national defense setup, it is said.

The two-day short course will be held jointly under sponsorship of the Animal Husbandry department of A. & M. College and the Texas Agricultural Extension Service, with C. E. Murphey as general chairman.

Subjects to be covered and speakers will include the following: P. T. Montfort, research as-

Burglar Dons Tear Gas of Own Design That Wouldn't Work

SALT LAKE CITY, Utah.—The European war has made even American burglars conscious of the danger of gas attack.

Salt Lake City police arrested an 18-year-old Negro in the act of burglarizing a drug store. He wore a weird, cloth mask—and he assured officers it had been contrived "in case they tried to use tear gas to catch me."

Officers said the design wasn't very efficient — with the hood down, the mask offered no protection, and with it up, the wearer couldn't see anything anyway.

MAKING AMERICA STRONG

IT TAKES 43 WEEKS TO GET INTO PRODUCTION OF TANKS...

BUT ONLY 3 WEEKS TO BUILD ONE

SOURCE: NATIONAL ASSOCIATION OF MANUFACTURERS

This is one of a series of illustrated articles designed to inform the public of the progress being made by American industry in providing the weapons for national defense. The facts presented have been gathered in surveys of leading defense industries and from other authoritative sources.

It actually requires on the average only about three weeks to roll a modern army tank through the assembly line, but that does not begin to tell the story of the production problems involved in the manufacture of this powerful weapon.

It is estimated that some 43 weeks of preparatory work are required to set the stage for the assembly line performance. Of that total 10 weeks are devoted to paper work — planning, blueprinting, etc.—and 33 weeks to getting into production. This latter phase includes procurement of raw materials, plant preparation, tooling up, deliveries, and a variety of lesser steps, all of them important and time-consuming.

Tank construction offers a good example of the complexity and magnitude of some of the major defense problems with which industry is coping today. The transmission alone of a so-called medium-sized tank weighs 7,000 pounds, or about twice the total weight of an automobile of average size.

A complete medium-sized tank weighs 55,000 pounds, or a little less than 28 tons. It would take a single workman 1,000 hours to build its transmission.

It was such dimensions as these that led an army man to observe not long ago: "I don't know why they call these babies medium-sized!"

GIRL COLLECTS PINE CONES

PASADENA, Cal. — Norma Louise Nelson, who is studying to be a forester, has as a hobby the collecting of pine cones. Her collection includes specimens from not only all kinds of cone bearing trees, but also from the different national parks.

"LOCHINVAR" ON BICYCLE

OMAHA, Neb.—Claude Miller, 18, Creighton University sophomore medical student, got the nickname "Bicycle Lochinvar" when he pedaled his bike 150 miles to Wisner, Neb., and back in 20 hours to see his girl.

Mr. Murphey will discuss both cutting of fresh pork for storage and curing, smoking and storing pork. Nutritional values of frozen foods will be discussed by Grace I. Neely, extension food preservation specialist. J. S. Hoopfer, assistant professor of mechanical engineering, will discuss machine operation.

A Queer Rat Trap Gets the Job Done

By United Press

WESLACO, Tex.—If you want to catch a rat, try W. H. Friend's latest scheme.

It sounds like a Rube Goldberg panacea, the Texas Experiment Station official admits, but it's said to be effective.

"Get a barrel and pile bricks several inches deep on its bottom," Friend advises. "Fill the barrel with water even with the top of the bricks and cover the water with oats."

"The first rat will jump in, thinking he has found plenty of oats. His squeaks of glee will attract other rats."

"However, since there is room for only one rat on the bricks, all but the strongest rat will drown. He will keep squeaking, attracting more rats."

The cost of the Texas State government is now nearly five times what it was twenty years ago, although the State's population is only 38 per cent more.
