BIG SPRING DAILY HERALD

TWENTY PAGES TODAY

Water For Big Spring

If you see this gushing fountain in the draw over east of the city, rest assured that it's water for Big Spring. This flow is from the blow-off valve in the Colorado River Municipal Water District lines, shortly before the mains tie in with the city system, and the water running here is from the district's well fields. The flow represents a clean-out and testing of the lines before final delivery of water to Big Spring. This should be in the next couple of days, and arrival of the water in sufficiency will be celebrated with an informal program at Steer Stadium Friday evening. The flow from the valve here is at the rate of about three and a half million gallons of water daily, and represents about half the potential of the district's delivery. The valve is in the draw just north of Highway 80 east, almost directly on a line from the Birdwell street extension. On hand to watch this uncommon sight for Big Spring Wednesday morning were (left to right) Mayor G. W. Dabney, R. T. Piner, president and R. L. Spring Wednesday morning were (left to right), Mayor G. W. Dabney, R. T. Piner, president and R. L Cook, a local member of the CRMWD board; W. L. Eads, engineer with Freese & Nichols; E. V. Spence, manager of the CRMWD, and H. W. Whitney, city manager.

Garbage And Sewage Costs Hiked By City

service charges on garbage collection and sewage disposal, adding 35 cents to the monthly garbage fee and a dime to the sewer rate.

monthly residential sewer service charge from 50 to 60 cents, and the garbage collection fee from 65 cents to \$1 per month. Commer-"are about in line," were not

New rates go into effect in Oc-

The commission also discussed the advisability of a hike in the minimum water service charge, bu decided to wait until it is determined what effect the delivery of water from the Colorado River on consumption.

Earlier, commissioners had considered increasing taxes as a means of offsetting dwindling revenues due to the drought and municipal water shortage. That idea also was abandoned after officials noted that garbage collection has been a deficit operation and sewdisposal has barely "broken

The \$1 70 tax rate was established in 1939 and has remained at that Mayor G. W. Dabney has been given crease was authorized with passage of a bond issue in 1950.

Green light was given plans for onstruction of a sewage "lift" station and other facilities to serve the Banks Addition in northwest Big Spring. Hosea Banks deposited a or to suspend the ordinance when check for \$6,000 with the city to assist in financing the utilities exasions. The deposit will be refunded to Banks over a five-year period if the area is developed as a Negro defense rental housing project as proposed.

The city engineering department

was instructed to place an order for pumping equipment, although cost of the installation will be neary twice the original estimate. City ngineer Clifton N. Bellamy estimated the lift station will require an outlay of approximately \$15,000. worth, had estimated cost of the at once.

project at \$8,100. Deposits totalling \$19,347 also were received for final phase of water and sewer extensions in the Monticello Addition, The deposits close the five-year refund plan for Developer Otis Grafa and others interested in the defense rental

ousing project in the area. A petition, signed by Mr. and Mrs. S. J. Harmonson and 38 oth

Happy Truman Awaits His Next 'Whistle-Stop' Tour Of Nation

fruman looked forward eagerly tolay to his next "whistle stop" tour after his first strenuous, ninespeech, two-day stumping trip for "wonderful candidate."

So enthusiastic was the President over his reception at rear platform talks in West Virginia vesterday that he assured crowds he is already thinking of campaigning for the Democrats again in 1956.

the Hungry Horse Dam in Western Montana Oct. 1 likely will turn into another, longer "give 'em hell" tour of the interior by train. And until election time.

It's up to the Democratic-National Committee to pick up the check, as it did on the Labor Day trip to Milwaukee, from which the President returned last night outwardly confident that the cost was worthwhile. The committee paid his transportation costs, including 10 first-class tickets for his bulletproof private car and 30 minutes of radio network time.

Truman opened up on Gen. Dwight D. Eisenhower, the Republican presidential nominee. At Milwankee he called him the "lonely. captive candidate" of GOP "spe

And at Parkersburg, W. Va., yesterday he called him a "spokesman for selfish politicians" willing to risk atomic war with Russia by loose talk about liberating the enslaved peoples of Eastern Europe.

Truman said one of Eisenliower's "masterminds" aides said he referred to John Foster Dullesis perfectly willing to have the Republican party and the Republican candidate say things that in-crease the risk of war, simply in order to get votes."

The President called this "cruel, gutter politics."

Dulles, asked to comment by reporter in New York, said:

Gospel Singer Due Here Sunday Night

Sister Rosetta Tharpe, billed as the "world's greatest gospel singer," will be in Big Spring Sunday night for a performance at the City Auditorium at 8 p.m.

The Rev. W. D. Atkins, pastor of he Colored Methodist Church in Lamesa, and sponsor of the appearance, states that Sister Marie Knight and the Southwing Singers will also appear on the program. The Big Spring performance is

The Political Chapel Has Quite A History, Considerable Color

An exhibit of hats collected and arranged by the New York Historical Society to illustrate the old saying, "my bat is in the ring," is open to public inspection, according to the Christian Science

The society's research department asserts the "hat-in-ring" gimmick was first used by Theodore Roosevek in the Bull foose campaign of 1912. (It became the symbol of the squadron led by World War 's greatest ace, Captain Eddle Ricken-

The hat-in-ring deal presumably stem-med from the old pugilistic custom of throwing one's hat into the ring before springing in oneself, the Monitor explains. Maybe, so, but couldn't it just as well have sprung from the arrant husband's habit of throwing his hat into the house? If it stayed, he followed it: if his wife threw it back, he went away from there.

Be that as it may, the political hat exhibit in New York shows that Thomas Jefferson affected the coonskin cap long before Estes Kefauver took it up. Abe

Lincoln and Andrew Jackson before him Cleveland sported the silk topper. Smith's brown derby is represented of course, as is the Homburg of Tom Dewey and the fedoras of FDR and Wendell Will-

Among the exhibit is a set of rules laid down for Republican parades of 1864. One of them issued to "Republican Invinciread: "No member shall return any taunts or insulting epithets of bystanders and all groaning is positively prohibited." Eighteen sixty-four was a pretty hot political year too.

Those were the days of the torchlight parade, with a fist fight every half block and perhaps a barrel of whisky at every second street corner.

The country's next President is sure to be a baid-headed man, said to be the first one in history with a genuinely shining dome. Ike and Adlai both have that receding hairline to a rather pronounced de-

Which recalls the saying that grass doesn't grow on busy streets.

Prospect Of Ample Water Calls For Temperate Consumption Of It

The prospect of relief from a summer's water shortage when the Colorado River Municipal Water District begins delivery here the latter part of this week calls for

While we can all be grateful at this outlook, we should not be blind to certain facts and situations.

First of all, no system of distribution is designed to take care of maximum consumption by its consumers at the same moment. Therefore, if there is a mad rush to use more water—as undoubtedly there will be—it is entirely possible that some areas will experience low pressure. The city's basic distribution system has

been revamped and enlarged, but there are certain sections which will not benefit immediately from this improvement. Therefore, these spots may find their problem not entirely solved by an adequate supply. Too, some parts of the city which have good pressure under limited use of water might find their pressure lowered if use is so rapid that it exceeds ability of pumps to put water back in reservoirs.

So a measure of temperate use of water is indicated. By no means should anyone use more water than they need, for to do such would amount to waste. Water is a precious commodity in West Texas and it should be so regarded. The fact that we obtain our supply from Howard. Glasscock and now Martin Counties, and ultimately from Borden and Scurry Counties should impress us with the difficulty unwhich water is supplied and hence for the necessity of wise use of it.

Merry-Go-Round - Drew Pearson

Technical Assistance, Point 4, Is Our 'Diplomacy Of Future'

(Note: While Drew Pearson is on a brief vacation, the Washington Merry-Go-Round is being written by several distinguished guest columnists, today's being Stanley Andrews, technical co-operation administrator in the Department of State).

By STANLEY ANDREWS

WASHINGTON .- There are many weapns which the free world can use to fight Communist aggression—military, political and economic weapons. But I believe history may well demonstrate that the most effective weapon we have in the struggle against Communism is the Point 4 pro-

Like most things of fundamental greatness, Point 4 is very simple. It helps people to help themselves-by teaching and sharing America's scientific knowledge and technical skills with the peoples of the underdeveloped areas, of the world. Point 4 is not a product of our defense

effort and it is not a substitute for defense, but Point 4 is no less a source of strength for the free world. Some of the countries with which the

U. S. is co-operating through the Point 4 program lie directly in the path of Soviet expansion. In most of these underdeveloped areas the threat of Communism is not a military threat, and it cannot be met with military measures.

Guns are no defense against poverty, ignorance, and unrest. In the underdeveloped areas the only sure defense against the spread of Communism and other forms of tyranny is a powerful, concentrated attack on disease and hunger and their evil consequences.

Point 4 is our weapon for this attack.

Point 4 is a new kind of diplomacy. Point 4 diplomats are dungaree and blue leans diplomats-teachers, health officers, engineers, farm-demonstration agents who work directly with the people in the villages and on the farms.

Point 4 is a people-to-people program U. S. technicians working with technicians of other countries are not concerned with political problems. In the midst of anti-U. S. disturbances in Iran, American and Iranian technicians continued to work side by side, trying to do a job that means more food, clean water, lower infant mortality, fewer deaths of mothers

Our work with the peoples of the Point

The Big Spring Herald

Big Spring Herald, Wed., Sept. 3, 1952

own people-to-people efforts, Drew Pear-son—the Friendship Train, the Tide of Toys, and the letter-writing campaign between the people of Italian descent in the United States and their relatives in Italy which helped swing the 1947 Italian elections for democracy.

Point 4 has been called idealistic. If Point 4 is idealism, it is hard-headed, practical idealism. There are sound economic reasons behind Point 4. Rising national income, more productive agriculture, and greater industrial activity make other nations better customers for United States' products and commodities They create markets for American businessmen and jobs for American workers. Beyond self-interest, the motives for Point 4 are embedded deeply in our

The peoples of the underdeveloped areas world-in Asia, Africa, the Middle East, Latin America—are awakening after centuries of impotence and subjection to outside domination. In the 18th century they were largely passed over by the industrial revolution and the political revplutions of France and America. Even the most commonplace measures we take our health and sanitation are unknown to millions of them. Hundreds of millions cannot read or write and have never known

American democratic tradition

the use of the ballot. The billion human souls in these underdeveloped areas are waking up to the potentialities of life in the 20th century. Many of them have recently gained naindependence. They are learning that hunger, disease and ignorance need

not be their everlasting heritage. It is in the tradition and the history of America that we belp them. Point 4 is the vehicle on which scientific knowledge. technical inventions and material progress become traveling companions with our ideals, our hopes and aspirations for achieving real brotherhood among men.

What has Point 4 accomplished? More than 1,000 TCA technicians are overseas working with some 20,000 nationals in 35 countries. The native "counterparts" of our Point 4 workers are being taught the skills and knowledge of American technicians. For the basic principle of Point 4 is to train the peoples of the participating countries so that each country can take over its own programs.

For example, the Etawah agricultural project in India is now run entirely by Indians. In Liberia, Frank Pinder, an exension agent from Florida, has helped the Liberian farmers produce a cash crop by providing 24 cocoa seeds for two cents Point 4 workers have reduced crop losses in Lebanon by showing the Lebanese citrus farmers modern ways of picking. shipping and marketing their crops. In Ecuador, Columbia and other Latin American countries health workers have almost eliminated the dread tropical disease yaws. A new disease-resistant rubber tree has been developed in Latin America. Malaria is being brought under co.:trol in the Near East.

Perhaps I should close this guest column with a prediction on "the shape of things come." I am willing to predict that the American people and the peoples of the free world will turn more and more the years to come to the Point 4 principle not only as a potent weapon against Communism, but because technical assistance is the "diplomacy of the fu-

Around The Rim - The Herald Staff

Hand Fan's Passing Lamented; Its Artful Pictures Recalled

The opinions contained in this and other articles in this column are solely those of the writers who sign them. They are not to be interpreted as necessarily reflecting the opinions of The Herald.—Editor's Note.

One of the casualties of this modern airconditioned age is the hand fan.

While its passing in general may go unlamented, it is not without a touch nostalgia that we look back upon the days when coolness in worship and all other public gatherings depended largely upon the endurance of a good right arm. In their own way, these examples

breeze stirring art were classics if not institutions. The paper fans had the loveliest pictures, which, like calendar art, lent itself to a particular situation. For instance, a sweet mother with her baby, or a bend in the Jordan with Mount Herma in the background, a tranquil pastoral scene were good for churches as well as paintings of Christ, Biblical scenes, etc. Sometimes, if a "ringer" got run in on one of the free fan offers, the crisis could be resolved only by a meeting of the board to settled whether or not those particular fans would be tolerated in the temple.

More latitude was allowed for fans at the Chautauqua although the tone was not unlike that at church. The art here was beamed slightly to the cultural and artistic side. Sometimes pictures were lacking and the front side was crassly commercial.

Barber shops, political meetings, hotel lobbies, the Elks Club and other places not bound by strait-laced tradition, went in frequently for the body beautiful. Where snow-covered mountains, rushing conveyed the idea of coolness to church and intellectual users, the Dimaily clad female torso suggested comfortable weather to the less erudite patrons.

Fans were varied. The all paper variety was a mighty poor product, and there just wasn't any use to make excuses for it. Even when the cardboard handle was reinforced by a twist of reed, it wouldn't hold up under serious 'anning.

Substantially better, and by far the most popular, were the paper fans with wood-en handles. Given decent treatment, they could stir up a right smart breeze and still come back for the second round. The chief trouble was that in the hands of youngsters or over-zealous oldsters, the which held it to the wood. In such cases, the fan flopped and fluttered like a mule with a crumpled ear. Another hazard was the hungry child, who persisted in chew ing the edges. This, no doubt, was the forerunner of modern evaporative cool-

ing, because kids kept them soggy. Most rugged of the crop of public hand fans were the palm type. Sturdy straw was wrapped around a reed or bamboo rim which wove itself into a comfortable handle. A person could fan with grea confidence and with effectiveness because they were larger than common gar-den variety. Most of the time, however you had to buy these because few firms wanted to invest that kind of money in fan advertising.

Private fans were the fanciest of alla In the main, these were the folding type, which milady carried in her purse or let dangle by a pretty ribbon or dainty chain from her wrist. The oriental variety were exquisitely done with intricate designs of cherry blossoms, snow capped mountains arched foot bridges over ting streams, and rickshaws. Some had bamiboo ribs and were light as a feather. Those made in this country frequently carried floral designs or went in for color combinations on the ribbon or paper or webbing or interlacing. The tough customers were the "ivory" ones which were really celluloid.

Besides cooling, these folding type could be used handily as a miniature club or prod. The other types shielded many a sleeping sinner from the minister; concealed moving lips; or tipped off the par-son, by the tempo of its use, that he was making it plenty hot for a certain soul, Many a romance budded from the coy widening of a cooling arc by which a stiff-collared young eligible directed a. subtle breeze to an almost blushing beauty. Great things, those fans.
—JOE PICKLE.

Business Outlook – J. A. Livingston

Draper Urges Private Lending To Help Bridge The Dollar Gap

eign func

WASHINGTON - William H. Draper, Jr., U. S. Special Representative in Europe, is an investment banker. He's on leave from the international banking firm of Dillon, Read Co. So, it's not strange private investment, safeguarded by governthat his report on Europe, just released by President Truman, should put a special

emphasis on international lending. Draper doesn't promise quick relief by loans. No, indeed. The virtue of his report is its_matter-of-factness. He doesn't hold forth Pollyanna-ish hopes. He says plainly that Europe has a long way to go

toward economic solvency, and still needs American help. He agrees with British Chancellor of the Exchequer Richard A. Butler that Europe would fare best with "trade rather than aid." Therefore this country must try to increase its imports; therefore, this country is buying military supplies abroad.

increase its industrial and agricultural productivity. For that, it must get further financial assistance. Draper puts the issue this way: "There

is real danger of a deep and perhaps disastrous fiscure between the economies of Europe and America The European market, separated in small compartments, no longer adequately serves the needs of the people. Existing trade restrictions and cartel arrangements fail to stimulate either mass production or mass selling. Mass production and better markets are essential if the economic development of Europe is not to lag still farther behind that of the United States."

Europe's hope is industrialization. The Schuman Plan for the unification of western Europe's steel industry is designed to eliminate cartels and compartmentalized markets in steel. It's an indication that Europe is more interested in modern production and marketing methods than in maintaining rigid customs barriers.

"The relatively greater productivity in the United States makes it very unlikely that the existing dollar gap can be closed by increased American imports alone, Draper says. He suggests that "a significant part of the remaining dollar gap could perhaps be filled by increased overseas investment." He's not referring to additional governe ment loans. He's thinking in terms of

ment guarantees. American businesses abroad face two-great nonbusiness risks: 1. They may not be able to convert earny,

ings into dollars-that is, get their money 2. Their plants may be expropriated or confiscated.

The U.S. government has undertaken to protect business enterprises against these specific risks. The Mutual Security Agency has insured against confiscation, a \$255,00 Otis Elevator Co. plant in the U. S. secto of Berlin and a \$1,050,000 Firestone Tire & Rubber Co, investment in Hamburg, Guarantees to insure convertibility of fors have been

panies and amount to \$36,151,000.

The total—less than \$40,000,000—amounts to less than 1 per cent of the trade def-teit the world is running visa-vis the United States this year. No wonder Draper wants the program "extended and strength."

Perhaps Draper can get his Wall Street friends into the act. Investment firms might arrange to make advances to specific companies abroad under agreements with MSA and then sell the securities to investors in this country. That wouldn't be easy. Investors are foreign-bond shy the sad experiences of the 'twenties and 'thirties.

Still, a company with long-term growth rospects, properly safeguarded U. S. government guarantee against con fiscation and currency convertibility, migh over. You never can tell, till it's tried. and so far, in the postwar period, no investment firm has tried it.

Draper's view is the long view. Investments can help build up Europe's economy so that European nations will be able to increase exports. In that case, they will be able o pay not only interest and dividends but, gradually, principal on outstanding debt.

Uncle Ray's Corner

Find Safeguard Against Leeches

In time of war, people are asked to give some of their blood for the soldiers. It has been found that blood often can save the life of a wounded man.

Thousands of persons answer the call. If they are in good health, and are young or middle aged, th.y seldom, if ever, suffer harm from giving a moderate amount of blood.

During periods of peace, there also is giving of blood. Relatives or friends of a sick person may go to a hospital, when there is need, and offer a pint of blood, per-In this modern age, let us note, it is

the well who give to the sick. We know that blood is of high value, and only in a rare case does doctor "let" the blood What a change from the old viewpoint? There was a time when it was the every-day custom of doctors to take blood from

the sick. The idea grew up that this would help to cure many kinds of disease. The old-time doctor might cut one or more veins and let a pint or a quart of blood to go to waste. There is little doubt that this brought death to thousands of persons who would have become well ex-

cept from the weakness which followed Many doctors used leeches instead of

cutting into veins. A leech is a worm of a special type; it draws blood from people or animals to which it may fasten

Nowadays we think of leeches as pests They live in both fresh and salt water, and may attach themselves to swimmers.

In some parts of the tropics, leeches are so common that they bring serious danger to the natives. Some leeches live on land, as well as in water. Natives are weakened by losing blood, and may fall easy victims to disease.

Tests lately have been carried out by British scientists on the island of Borneou with a chemical known as 0960. Natives walked through jungles in groups of three. One in each group wore trousers and socks treated with the chemical. In this, way it was proved that the chemical protects anyone who makes use of it. Even after clothing, treated once, is washed seven times, it tends to keep leaches away, as the common of t

This idea-full color theory is sug armed services in a low-necked gested by Margaret Hutchison, Col-Paint Co., originators of the Numore than 2,000 shades.

There's a lot of good sense in what this color enthusiast says. Maj. Frank W. McWalters of the Walls are changed more often than carpet or rugs and fabrics on upholstered furniture. And accessories and small pieces of furniture can be changed so easily, with a paint brush you can wield yourself. With the furnishings that must 1 teaspoon baking soda, 1 teaspoon stay as they are in neutral tones, the color scheme can be changed ened chocolate, 1/2 cup hot water, greatly and often with the wall and 1/2 cup shortening, 11/2 cups sugar, accessory colors — whatever the 2 eggs, 2-3 cup buttermilk or sour new color scheme idea is, the neu-milk, 1 teaspoon vanilla, 2-3 cup ral colors fit in.

Paint provides more color per square foot than anything else. And paint is the one thing that offers he exact shade you want - it can be mixed to order to match any sample or whim. The color of fabrics and finishes must be chosen from far fewer shades that are pre-

fetermined by someone else. Miss Hutchinson lists many furnishing items that can be painted in addition to walls, to help change a color scheme. Among them are furniture, lamp shades and bases, picture frames and mats, mirror frames, blinds, shelves, wood, plas-ter and metal wall decorations, conces, light fixtures, wastebaskets, window cornices. Color scheme spark can come from a simple idea such as painting mats the same Past Noble Grands color for a number of pictures to make a varied group belong together on the wall. The mats can be

HARBEL, Liberia, Sept. 3 UFmissionary ship bringing Bibles and buildozers to the natives of Liberia arrived here yesterday and was met by the millionaire Texan who financed its trip. R. G. LeTourneau, 63-year-old in-

dustrialist from Longview, Tex., didn't wait for his Ark LeTourneau to dock, but swam out to meet th converted LSM as it came into the harbor here.

The ship was sent to Liberia from the United States by LeTourneau to aid the country materially and spiritually. LeTourneau him-self arrived by plane earlier and was on hand to welcome the Ark. Those aboard the ship included

Mr. and Mrs. Gustav Dick and their three children. Mrs. Dick, a Sunday School teacher, will be the spiritual leader for the development community which will be created at Tournata on the Liberian coast. She is LeTourneau's

Interior Secretary Harrison Gigsby, Speaker of the House Richard Honries and Assistant Agriculture Secretary Stephen Tolbert also met the Ark.

A leader in church work, LeTourneau believes the Liberian natives will fake to Christiahity with more zeal if they have a prospect for more food. He hopes to transform the country into an export land with special emphasis on rice and lumber production.

Equipment the sponsor is bringing is valued at a million dollars. LeTourneau is president of R. G. LeTourneau, Inc., manufacturers of earth-moving equipment. Be-sides Longview, the firm has of-fices at Peoria, Ill., Toccoa, Ga., and Vicksburg, Miss.

Court Asked To Order Troops Out Of Korea

CLEVELAND, Sept. 3 W-Wir liam W. Cavanaugh, 32, an afterney and Air Force veteran, asked figures. Federal District Courts today to require President Truman to take all U. S. troops out of Korea. He also asked the court to reprimand the President for sending armed forces into Korea, and said Mr. Truman did so by executive order, without Congressional au-

Asked for comment, District Attorney John J. Kane Jr., said in Assigned As Chief the first place, you can't sue the President. And if you could, it would have to be done in Washington. The district court would not have jurisdiction."

Cavanaugh told reporters as he filed the petition that "I drew up this petition a year ago but held off, thinking someone else in the country would take this step.

Four people have pleaded guilty to driving while intoxicated over the Labor Day week end. One other is out on bond, and a sixth has been charged.

McElroy and Clarence H. Wells. their driver's licenses were sus-

pended for six months. F. F. Phillips has been charged. The six cases cover the period from August 28 (Thursday) through

MARKETS

mixture of gains and losses were registered today by the stock market in quiet traiting.

Most changes were minor fractions with only a few pushing toward a point.

There was an opening rush of overnight orders, but these were soon filled and the lape stood still.

Railroads were unchanged to higher, Seela, which enjoyed a buying flurry yesterday, were narrowly mixed as were unclosed, such and merchanising shares.

Radio-telsvision issues showed some good plus signs, and chemicals were mostly higher. Utilities edged upward.

The remainder of the market was quietly atendy.

American Telephone, yesterday's most active issue with 17,200 shares changing hands, opened on a block of 1,000 shares that price and a little higher. Higher stocks included flants Fe. Texas Co., United Oas Co., Dome Mines. Du Pont, U. S. Steel, Chrysler, Radio Corp., and Zenith Steel, Chrysler, Radio Corp., and Zenith Steel, Stears Roe-

Lower were Bethlehem Steel, Sears Ros-buck, McIniyre-Porcupine, and American Tobacco.

COTTON
NEW YORK, Sept. 3 (F)—Noon cotton
prices were unchanged to 45 cents a bale
higher than the previous close. Oct. 39.58;
Dec. 39.38 and March 39.38.

NEW YORK, Sept. 3 (P.—The overall level of wholesale food prices held unchanged at the year's high this week after climbing steadily in the previous five weeks, according to the Dunn & Bradstreet food index.

At \$6.70, the index was 1.8 per cent below the year-ago level of the property of the property

Hurricane

A growing Atlantic hurricane, with winds up to 90 miles per hour, whirled up in the Atlantic about 400 miles northeast of Puerto Rico and apparently was moving northwestward at about 15 miles per hour. The hurricane, second of the season, offered no immediate threat to any land area and was about 1,300 miles east southeast of the Florida coast . (AP Wirephoto Map).

Construction **Permits Over** \$41/2 Millions

August construction amounting to nore than a half million dollars ushed the city's 1952 building total \$4,558,020, Loy House, acting building inspector, reported today. Total for August was \$555,825. ssued during the month were 186 onstruction permits.

The August aggregate was the third highest monthly total this year. It was exceeded by June,

	, soa, and sur	y with \$937.

Caudle, former assistant attorney

Afterward, Chelf said his com-

mittee "has a lot more work than we thought we had."

Caudle, who was the government's chief tax prosecutor until President Truman fired him from his job as assistant attorney general last November, provided Washington and he said Stevenson some information that was brand new to them, Chelf said. The chairman said the discussion covered "a lot of cases and a lot of things."

Rep. Keating (R-NY), ranking minority member of the committee, told reporters that some of Caudle's information "related to previous attorneys general," but e didn't elaborate. Caudle was brought into the Justice Department in 1945 by Atty. Gen. Tom C. Clark, now a Suprem Court justice. Clark was succeeded by J. Howard McGrath, who was

activity. Today Caudle, telling reporters he was "delighted to co-operate," stood by for another private session with the subcommittee. The time of his next appearance remained uncertain because of a public bearing scheduled today in-

nead of the department when Cau-

dle was discharged for "outside

to the recent ouster of a veteran Justice Department lawyer, also for outside activity. But both Chelf and Keating said Caudle may be questioned again before the end of the day. They s. d they expect eventually to put him on the witness stand at a pub-

lic hearing, Among witnesses called for to day's hearing was James A. Mullally, long-time attorney in the Justics Department's Criminal Division, who resigned after his recent ion by Atty. Gen. James P. McGranery.

No Mishap Injuries

John Burl Gordon, 307 N.W. 9th and James Robert Smith, 614 Ridglea, were drivers of cars incolved in a mishap at Second and Benton Tuesday afternoon, police reported. No one was injured

By ED OLSEN
RENO (6)-Tom Mechling, young Washington, D. C., newspaperman who drew belly laughs from oldtime Nevadans when he filed for the Democratic senatorial nomina tion, early today moved ahead of Alan Bible, 42, powerful Sen. Pat McCarran's choice for the job.

With about 98 per cent of yester-day's primary election vote count-ed, Mechling, 31, by 699 votes with only about 500 more to bz counted. An unofficial tabulation early today gave Mechling 15,777 votes to 15,078 for Bible.

Bible had led throughout last evening. But figures from the outhern part of the state favored Mechling, who came to Nevada only seven months ago. The voting, however, was not conclusive.

The winner meets incumbent Re-publican Sen. George Malone, who won renomination easily over Lawrence Ebert, Winnemucca oil man The tally was 11,703 for Malone

The Republican race for nomination to Congress was as close as the Bible-Mechling contest.

Clifton Young, 30, a political novice, held a slim lead over Sam Arentz, 42, Pioche mining executive and son of a Nevada congressman of the 1920s.

The incomplete score was Young 6,958, Arentz 6,522. Owen Woodruff and Silas O. Tanner of Las Vegas ran far behind.

Young campaigned as one of the earliest boosters of Gen. Dwight Eisenhower for the presidency. Arentz supported Sen. Robert Taft of Ohio for the GOP nomination. Democratic Rep. Walter Baring

had no trouble overcoming Simon Conwell of Rawhide to win his party's renomination. The incomplete tally: Baring 16,985, Conwell Mechling's showing is sensational

Community Project Spurred By Hope

The effort to bring in an irrigation well on the Louis Underwood farm at Luther is a community project in which everybody has an interest, is willing to work and which inspores their greatest hopes. The field in the corner of which the drilling is taking place is as near naturally perfectly level as any in Howard County, according to a survey of the Soil Conservation Service, and in 1950, the owner recalls, this land produced a bale to the acre. With good irrigation, production might go beyond any expectation. There are always a few cars around as neighbors drop in to see how things are going. when the picture was taken was the owner, his brother L. S. Underwood; the owner's son, L. C. Underwood, who is assisting with the drilling; Ed Hyden, a neighbor and the rig owner; Jim Caughey and Van Owens, other neighbors and T. M. Hagan of Colorado City, who is as interested as anybody else.

Mao And Stalin Stress Unity In Far East

MOSCOW #5—Red China's leader Mao Tze-tung and Soviet Prime Minister Joseph Stalin emphasized Russian - Chinese unity in the face "threats of new aggression in the Far East" as they exchanged greetings on the seventh anniver-sary of the World War II victory

The lengthy telegrams sent by the leaders of the two huge Communist nations were published on the front page of the Communist party newspaper Pravda today. Both Stalin and Mao stressed that Soviet - Chinese friendship is "un-

Pravda in a lead editorial charged that Japanese reserve police troops are fighting in Korea. In his message to Stalin, Mao declared:

"Now, when again Japanese militarism is being revived, when the aggressive forces of Japan again are lifting their heads, the un-crushable friendship and alliance between China and the Soviet Union are a firm guarantee of the prevention of a repetition of aggression from the side of Japan er any other state which should unite with Japan in acts of aggression, a firm guarantee of the maintenance of peace in the East and in the whole world."

Stalin said in reply: "The great friendship between the Soviet Union and the Chinese Peoples' Republic is a reliable guarantee against the threat of new aggression, a powerful pillar, of peace in the Far East and the

Stalin asked Mao to accept the congratulations of the Soviet people and the Soviet Army. He ended by hailing the Chinese Peoples Liberation Army and the "inviolable friendsbip" between the Chi-nese Peoples' Republic and the Soviet Union.

Steers Turn Up With Blisters

If the Big Spring High School gridders weren't going full speed in their workout Tuesday, it was muscles.

The extended workout Monday caused some of the lads to come up with aching arches. All of them were out for Tuesday drills, none-theless, as Coach Carl Coleman sought to whip his club into shape for their opening game with Breckenridge a week from Friday night .The Longhorns, boasting experience and weight they didn't have a year ago, worked well into the night Tuesday and more of the same was in prospect today.

Rising temperatures meant that drills would be tougher from here on out but some of the lads are beginning to round into shape. By the end of the week, the worst should be over. Coleman emphasized 'again and

again that the Steers had so much to do and so little time in which to do it and the grim athletes were meeting the job head-on. The Steers' couldn't be faced

with a tougher opening round for since Breckenridge is the defending State AAA champion and is returning a veteran team.
Still and all, Coleman feels his team will learn more facing the gridiron giants than they will meet-

ng a losing eleven.

Wins For Sens

Mike Fornieles (above), pitching star of the Big Spring Broncs, made his first big league start as impressive one when he blanked Philadelphia on one-hit behind the Washington Senators Tuesday night. Final score was 5-0.

Julie Sampson **Net Champion**

By HUGH FULLERTON JR. FOREST HILLS, N. Y. W-It isn't likely that anyone is going to beat Maureen Connolly in this year's National Tennis Champion. ships-at least not before the finals. But a few of the fans scattered around the West Side Tennis Club already have had a look at the Brooks in the opener. Drews, annext Connolly. other Dodger killer, won his 13th and his fourth over the league lead-ers in the nightcap.

She is Julie Sampson of San Maripo, Calif., the newly crowned national girls champion, who caused some eye-popping and tongue-wag-ging yesterday by he way she disosed of Japan's woman champion, Sachiko Kamo.

Julie is a tall, thin reddish-haired girl who appears to be at about the same stage of tennis development as Miss Connolly was year or so ago.

Little Mo went high on through to win the United States and Wimbledon championship. She's favored to repeat this year and she has lost only one game in each of her two matches.
Miss Sampson didn't get started

until yesterday because she was busy beating Mary Ann Eilenberg-er of San Diego for the girls title last week. So she got busy and beat Miss Kamo, 2-10, 6-4, in a

first 10 and should have been gress rules. Teams entered will be seeded for this tournament

Ex, Senator Star league game.

The 20-year-old right hander. who won 17 and lost six games for Big Spring and wound up with an ERA of 2.85, issued a second-inning single to Joe Ast roth. He has been with Havana, Cuba, this season,

The hit by Astroth prevented Fornieles from becoming the first pitcher in modern times to

of the Big Spring Broncs in

1951, pitched a one-hit game in

his big league debut with the

Washington Senators last night. Fornieles, who led the Long-

horn League in earned-run-averages while here last sea-son, beat the Philadelphia Ath-

He is the second Big Spring

graduate to pitch for Washington. The other was Potato Pas-cual, who later quit and returned to his native Cuba. Pascua beat the Athletics and lost to

Boston in his two starts.

In the game at Washington,
Fornieles pitched hitless ball
for the last 7 2-3 innings. Mike, who the judges passed over in selecting the Rookie of The Year award in the Longhorn League last year, was originally ticketed for return here this spring but Havana elected to keep him at the last moment. He had asked to be re-

Brook's Defense May Be The Secret Of Team's Success

Dodgers, seeking to break the ma-jor league club fielding record, are mark to Rice's .994, jor league club fielding record, are also well represented among the individual fielding leaders today.

The pennant-bound Brooks, who fixed pennant to the individual fielding leaders today.

The pennant-bound Brooks, who fixed pennant to the individual fielding leaders today.

boast a .984 defensive mark, con-tribute third baseman Billy Cox,

If the Dodgers continue their present pace they will eclipse the existing team record of .983, established by the Cleveland Indians in 1947 and again in 1949, Cox heads the third sackers with

a .982 average. Willie Jones of the Philadelphia Phillies is second with a .974 slate.

Reese is deadlocked for shortstop lead with Boston's Johnny Logan at .975. Campanella holds a slight edge

Bowling League

An organization meeting is sched uled for 8 p.m. tonight at the West Texas Bowling Center to form a men's bowling league, it was an-

last week. So she got busy and beat Miss Kamo, 2-10, 6-4, in a first-round match played down on a clubhouse court before few spectators.

Afterwards a tennis official remarked that Julie already plays well enough to be ranked in the league probably will go on for 35 weeks and will be organized well enough to be ranked in the light of the league probably will go on for 35 weeks and will be organized under American Bowling Confirst 10 and should have been

sponsored by local merchants.

NEW YORK UN-The Brooklyn over Del Rice of St. Louis. The Along with Sid Gordon of Boston,

shortstop Pee Wee Reese, catcher
Roy Campanella and outfielders
Carl Furillo and Andy Pafko to
the National League's list of top first baseman and Hatton, a con-verted third baseman, tops the sec

ond sackers at .990 In the American League, the highlight is Clint Courtney's sparkling .998 mark. The St. Louis Browns' catcher shows only one miscue in 455 chances. Johnny Lipon of Boston is the

front-runner among the shortstops

Other top men defensively are outfielder Gene Woodling of New York, 1995; first basemen Mickey Vernon, Washington and Detroit's Walt Dropo with .963 each, and second sackers Nellie Fox. Chi-cago; and Bobby Young, St. Louis, deadlocked at .986

Distributor

CLIFF PROFFITT

Then I got Conoco's NEW 1-2-3 50,000 Miles No Wear Service!

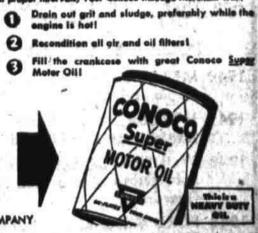

Now Doctor Fred's a happy "med"... thanks to one of the greatest services ever offered the motoring public—a service that helps engines last longer, perform better, use less gasoline and oil!

It's exactly the same service that kept test cars new in Conoco's spectacular "50,000 Miles-No Wear" road test! In that famous 50,000-mile test, with 1,000-mile drains and proper filter service, test car engines showed no wear of any con-

sequence; in fact, an average of less than one one-thousandth inch on cylinders and crank-shafts. Gasoline mileage for the last 5,000 miles was actually 99.77% as good as for the first 5,000. Now you can get this same 1-2-3 "50,000 Miles-No Wear" Service, at your Conoco

Constitution **Party Of Texas Denies Charges**

SAN ANTONIO, Sept. 3 UR-Claims of resigning national offi-cers that members had made statements which sounded anti-Semitic were denied here today by member: of the Texas Constitution Par-

Philip Lee Eubank and Roy Pennycuick both hinted that Mrs. Suzanne Stevenson a d Percy L Graves Jr. actually had no party offices from which to resign,

Eubank is national representative of the Texas branch of the party. Pennycuick made the keynote address at the recent state convention here. Mrs. Stevenson and Greaves said

Monday they resigned because a party member they did not identify had uttered anti-Semitic state-Eubank said Halliburton Fales of New York, N. Y., was named per-

manent chairman by the party's national committee in Philadelphia Aug. 30. He said this let Greaves and Mrs. Stevenson out of their jobs as eg-chairmen without the necessity of resigning. Eubank and Pennycuick said the

Constitution Party's platform includes a religious equality plank and that membership is welcome to any religious group.

The party has nominated Gen.

Douglas MacArthur for President

and recently said it favored Atty Gen. Price Daniel for U. S. Senator from Texas and the re-election of Gov. Allan Shivers. Eubank said the only qualifica-

West Texas HELD and RANGE SUPPLEMENT OF THE BIG SPRING HER

FIELD AND RANGE has the pleasure of presenting to the ranchers and farmers of Howard County, and to the people of Big Spring, Miss Earlene Guyer of Brownwood, and Marion E. Everhart. The two are new workers with the Big Spring unit of the Soil Conservation Service. Miss Guyer was transferred here from Seymour as a secretarial worker, and Everhart has been assigned to Howard County as work unit conservationist. He came here on a promotion from Snyder. To this issue of FIELD AND RANGE he has contributed an article on the need for cover crops on the cultivated land in this area for protection against the blowing that may be expected this coming winter and spring. FIELD AND RANGE is happy to welcome them both.

County's First 1952 Bale

Howard County's first 1952 bale was grown by Ralph White of Coahoma (right) and was ginned at the Co-Operative Gin and Supply Co., of which Gordon Hodnett, (left), is manager. This bale will be sold at a Chinese auction sponsored by the Big Spring Chamber of Commerce on the Courthouse Square, Saturday, September 6, at an hour to be announced later. Howard County has produced as high as 65,000 bales of cotton, but this year, because of the drought, estimates are that the production will be limited to less than 1 000 bales and some estimates run well below that unusally low figure. Production will be governerd by the amount of rainfall received between now and the end of the cotton growing season. Reports from over the area disclose similar situations except where irrigation water is available for cotton production. White said 2,140 pounds of seed cotton was necessary to produce this 505-pound bale. It is also to be noted that a short cotton crops hurts not only the cotton farmer but the stockman as well, since cotton and cottonseed products for livestock feed go hand in hand in West Texas economy. Some of Howard County's gins will not be in operation this season and others are hoping for a share of the business from those areas north of here where crops are reported to be good.

THE GRUB LINE

With Franklin Reynolds

know hearly every man he met on the street or in the saloons, and every one of them knew him. Clay was one of the "great" among the cowboys of forever

You aren't likely to find any oldtimer who will deny that Clay McGonigal was the greatest steer toper of all time. In fact, around rodeo arenas in the old days there was no gresser compliment that could be paid to a cow hand than

to say "he did a McGonigal."
But there was a time, out in New Mexico, Clay overplayed his steer-roping hand.

At this juncture, we must introduce Sol Schoonover, a picturesque character around Carlsbad saloons and other hot spots in 1904. The boys called him "King of the Gamand Sol gloried in the title. The feeling between Clay McGonigal and Schoonover wasn't friendly but there was no open enmity.

But getting back to Clay, he knew he was a good steer roper, best in the world. In those days the roping steers were wild Long-horns and they weren't 600-to-800 pound overgrown calves that are being roped today. They weighed around 1,000 or 1,200 pounds. Nor was the steer given a thir-ty-foot start on the roper as the

rule is today. Back in 1904 the steers were given a start of 100 feet, and on such a steer with such. a start Clay had scored a time of 23 seconds flat at Tucson for the roping, trip and tie. Incidentally, fifteen years later, with a thirty-foot start he performed the feat in 9 3-5 seconds at an exhibition in Chicago.

Clay's skill with the lasso had taken him all over north and South America and he had just returned from one of these trips when he walked into the Lone Star sa-

n in Carlsbad.

Townsmen and range riders who happened to be in twon, gathered around the traveler, and to these stay-at-homes Clay and his com-panions were recounting their adventures as grass after glass was d and emptied.

All the while Sol Schoonover was standing down the bar a ways and drinking alone. Finally he's heard

Il he figured to hear.
"You're doin' a lot of talkin',

Clay." the gambler said. "Personally I don't think you're as good as you claim to be, or as good as others say you are. I ain't tripped a steer for a long time but I'm about minded to take you for a good side bet that I could do better than you with both hands tied be-hind my back."

Clay was quick on the betting trigger but he took time out to haugh, "I'll tell you what," he said, I'll bet yo \$1,000 I can tie ten steers in laster time than you can tie one, an' I'll let you pick the ten steers!"

A heavy silence fell on the

I'll take that, Clay" said Schoonover who had been a top cowboy

cash was put on the bar, the saloon keeper put it in an envelope, wrote the terms of the bet on the outside and deposited it in his safe.

Then every man said to the man nearest him: "I'll bet you..." and word spread over town

Schoonover wanted to do more than just win Clay's \$1,000. wanted to beat the great McGonigal. He needed practice and so he bought a bunch of steers, borrow-ed a mighty good horse that the r mer wouldn't sell, and Frank, Sam, and Nib Jones of Rocky Arroyo, all top ropers in their own rightr, dropped all other chores

It's likely ten more vicious bo-vines Lad neve, before been thrown together in one corral. Sol was buy you a drink when we get to spending three times as much montown," he said. ey as he had bet Clay to get the

There was a day when Clay had reen a big r an brute that had McGonigal of Midland County could killed half a dozen men. Clay arride into Big Spring and would ranged for this animal to be brought to Carlsbad to convert Schoonover into the seventh notch on his ble xly horns.

But then Clay had already seen other things in Mexico. He recalled how the Spanish fighting bulls were kept in darkened corrals prior to the fight. Clay had conceivc' the idea, without being told, that this made them all the more vicious.

Men who had peeped through the cracks in the cage announced that they had never seen a meaner steer and predicted Sol's death.

Under the agreed rules Clay was to rope his ten steers first, one right after the other, as fast as they could be run through the chute, tied and then chased out of

On the big day the show was every bit as good and gory as ex-pected. Clay had one horse gored pected. Clay had one horse gored and also used two others. He broke half a dozen ropes. One steer jumped the fence, charging the grandstand. Clay's clothes were ripped and his arms and legs crisscrossed with angry red

Finally he was through, sweatdrenched and weary man. The managed to stand up and throw his arms in the air. The timers wrote a verdict of six minutes, an average of thirty-six seconds to

Now it was time for the big event.

The crate containing the Mexican man killer was hauled out on the field on George Lucas' dray. Soi Schoonover, mounted on Man-dy Jones' black roping horse, was

The cage was opened and the steer rushed out into the brilliant New Mexico sunshine. And he came out fighting; he was fighting the air, the sunshine; he was fighting his shadow, he was fighting everything it. sight. But he could see Sel and the black horsel Suddenly dumped into the sun-shine the steer was temporarily

But the animal could hear, and charged blindly in the direction of all nearby noises. Three or four times he alm, st caught Sol's horse. Then finally they were in position and Sol sailed a neat loop out and over the steer's horns. The lariat tightened with Sol going away.

One end of the rope was tied to the saddle horn and the other was secure around the horns of the wild steer. But Sol had missed d. apping the slack rope under the steer's hip bone to provide the lowerage to throw him.

With a less skillful reping horse

Sol Schoonover would have been killed Then, with the timers' watches ticking away Sol with noble as ance from his mount made the trip. The steer salled through in his day, "af to give you a ar tance from his mount made break, I'll let you pick my steer." the trip. The steer salled through Two thousand dollars in quick the air ten feet above the ground and came down on his side. But unlike most steers he wasn't through. He was trying to get back

on his feet, getting medder every Sol knew that he must not let that steer get up, so he tried to bill the anim... Sol rode back and forth at top speed, suddenly ti He ening his rope each time in at-oni- tempts to break the steer's neck. But the neck was tough and the steer survived.

Sol's backers with their eyes on their watches, were yelling for the tie, and he could hear their clam-oring. It was facing them after-wards or facing that maddened But Sol and his backers hadn't die, dodged flying hooves, made the time in roping practice. They had also stopped their watches, been in the mountains looking for the wildest, rangies, meanest, and fifty-eight seconds!

It's likely ten more

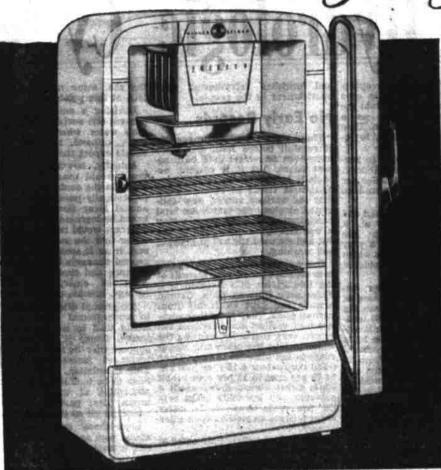

Clay McGorigal was a good Sport. He smiled walked over to sport. The smiled walked over to Sol and congratulated him.

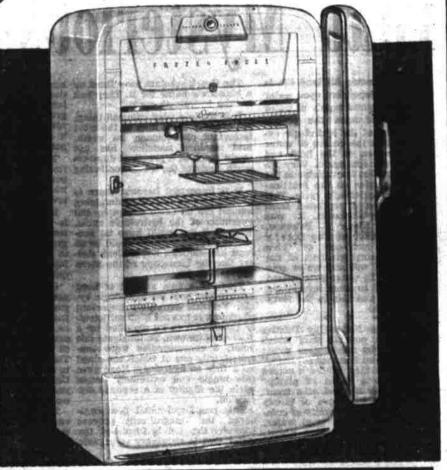

The next day McGonigal put on job done.

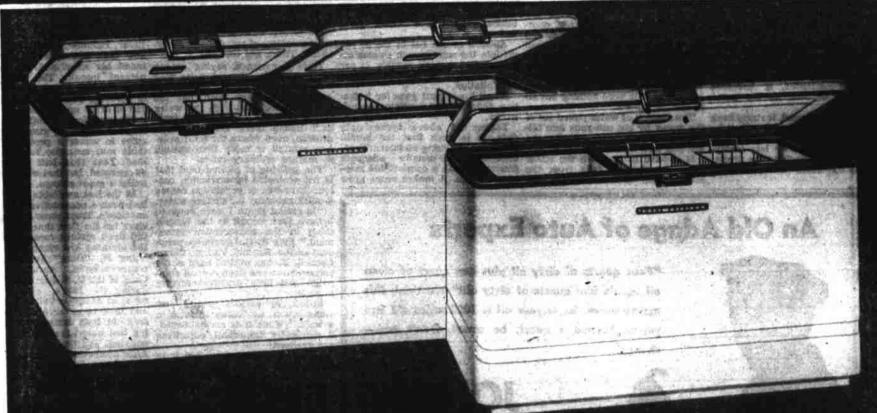

And Clay's consideration of Sol out a bridle on his horse, and lo and behold, he set a world's steer on a trip down into Mexico on roping time record in doing it. 221 W. 3rd St.

Remarkable savings on this efficient 13.6 cu. ft. Model with 476-lb. capacity. Fully-equipped with easy-to-lift counterbalanced lid, 2 wire baskets and dividers, automatic interior light, and freezer walls that won't sweat in humid weather.

Rainfall Depends On Functioning Of That Mysterious Hydrologic Cycle

(Editor's note: All land life is complettly dependent upon water and an adequate supply of water is dependent upon the proper functioning of the hydrologic cycle which is the course of water from the sea to the land and back to the sea again. Very little information is available to the average reader on the functioning of the hydrologic cycle. This article is being reprinted from The Farmer-Stockman. It was written by Elmer T. Peterson, associate editor of The Daily Oklahoman and one of the world's greatest students of the problems of soil and water conservation. The water goes around and around to keep everything else going, and this is the story of that cycle)

Back in the Not-so-Gay Thirties there was a popular song which ran: 'Oh, the music goes round and round-and it comes out here."

Water does that. Where it comes out, imagine a "horn of plenty" instead of the big end of a trom-bone. Out of this horn of plenty comes a prodigious variety of commodities that depend upon water. Not only meat, vegetables, wheat, fruit, berries and other farm prodbut industrial production as Vast amounts of water are necessary to produce steel, gasoline, textiles, building material. We need water for everything we eat,

First, the water is in the ocean. By evaporation it goes up. Then it is moved over the land by winds. When the vapor strikes a cold cur-

Striking the ground, it starts back toward the ocean again, either by surface runoff or by absorption into the soil, and more or less underground travel. Reaching the ocean, it starts the same round, all over

It is really a very common thing, yet in one sense it may be the most important phenomenon on earth. Still mankind somehow has not made much of a practical down-toearth study of the whole continuing

It is important because there is no conceivable way of maintaining human life on earth except by the operation of the hydrologic cycle. Without it we would have no economic structure. There would be no land life—nothing but a bleak desert like the landscape of the moon appears to be,

There is a vast amount of book knowledge about the hydrologic cycle. Yet this extremely important phenomenon has not been sufficiently recognized to be dignified by a science of its own. To illustrate this point, 6 encyclopedias were consuited, only one of which contained an article on hydrology. None gave this magic and extremely potent cycle the dignity of a separae dis-

This round-and-round deal engineers the magnificent process whereby the soil is furnished the water that is necessary to organic vitality.

Enormous Scope

Hydrology is a science of enormous scope and importance, but up to the present time it has been so widely separated from other vital interests, such as agriculture, flood control, biology and conserrent and condenses, it becomes vation that it sits in a secluded precipitation. rain, snow or hall, so the water corner, as if it were nothing but an About 2 per açademic şubject.

The amount of water pulled out of the ocean by the sun runs into billions of tons a year. Nobody can tell just how much.

a high-brow name for it. They call tion from the land. Some is used it "the hydrologic cycle." to for irrigation. Some soaks into the ground, to emerge again as a spring, or it is pumped out. Then it may be used over again, to repeat the process.

Much of it is "wasted," to borrow the language of one authority. ecause it goes into vegetation for which man has yet discovered no

Some water becomes polluted and is thereby unusable. Some of travels very slowly through the ground—as little as a mile a year in some cases. The estimates which follow must therefore be considered quite elastie

Continental United States receives an average of 30 inches of precipitation per year, ranging from almost nothing up to 80 inch-The midwestern and southeastern farm states receive from 20 to 60 inches (Louisiana not included). The west coast states get from 20 to 40 inches, Central Oklahoma and Central Texas get about 30 inches a year, more to the east, less to the

The total volume of water falling on the nation in an average year is more than half a trillion gallons.

natural absorption by growing vege-tation and trees, the use is 200 billion gallons, of which about 30 billion gallons are taken from

About 8 inches out of the 30 run off into the sea through streamlets and rivers, making roughly 25 per of what is received from

About 2 per cent goes for Irrigation, industry and municipal water-

Taking the above approximate data, it is seen that the humid areas are receiving an intermittent, It is hard to measure the water beneficent and usually adequate from the time it falls from the downpour, with a comfortable marclouds until it reaches the sea gin to spare. It makes crops grow

used nourishment to the people.

No Early Records

There were no adequate records of rainfall before 1870, and there have been imperfect data until re-cent years. Yet it is certain, es-pecially in view of the increasingly disastrous floods of recent years, that the surface runoff, now esti-mated at about one-fourth the total precipitation, is much greater than it was before the plow tore up the sod and exposed the soil to gullying and washing.

One way of definitely proving this is to consider the 22-year records at the Red Plains SCS Experimental Farm near Guthrie, Okla. Careful records are kept on runoff from various plots. They show that vegetation of various kinds reduces the runoff, very markedly, causing the water to take the other and slower route to the sea-the subway. Open tilled crops show a 22-year average of 10 per cent to 11 per cent runoff while sweet clover above about 4 per cent and Bermuda grass only cent. Grass holds water about 9 times as well as open tilled

Dr. H. H. Bennett, first chief of the U. S. Soil Conservation Service, is authority for the statement that the plow produced 200 million new water-courses in the United States, and that these water-courses have greatly hastened and increased the volume of runoff from watersheds. These are the gullies.

It is a common saying among farmers in the humid belts that we get plenty of rain or snow to grow crops every year, but the trouble is we don't keep the water where it falls—it gets away from us." Hence there us." Hence there are occasional drouths, even where the total average rainfall is more than enough to mature ordinary crops.

The gullying of plowed land that is not protected by terracing, con-tour-furrowing or vegetation causes

quick get-away for surface water. "In recent years I have come to believe that insoak is the biggest thing in the conservation move ment," says R. C. Longmire, presi-dent of the Washita Valley (Okla.) Council. He has worked hard at the conservation and flood control campaign and is a practical farmer

Insoak, by various means, prevents runoff, or "slows it down to a walk." When it is accomplished, extremely important objectives are realized:

1. We save the water, put it to use making crops, after which a part of it seeps down into lower levels to raise the water table.

2. We save the soil. Enough data have been acquired to justify the conviction that the hydrologic cycle can be nitched with sound farm practices in such a way as to revolutionize not only production but flood control as it affects downstream riverside

drouth year of 1948.

He used a deep-stirring chisel plow, in addition to terracing and other conservation practices; that year his springs were full and well-water plentiful, while the neighbors had to haul water for their livestock.

Higher Water Tables

A newspaper correspondent in Lincoln County, Okla, reported in 1950 that for some unknown reason the water table in some localities was getting higher. A bit of investigation showed that the rise in the water table coincided with the increase in-terracing and other conservation practices. It was the good which Mother, Nature was practicing militons of years be- exceedingly significant. fore man plowed up the sod and created the fast runoff to the sea. Since about one-fourth of our pre-

cipitation gets away by runoff

idea at this point.

Devising a national program to prevent this surface runoff by stop-ping water where it falls might seem, offhand, to mean that we should expect the rivers to dry up.

Actually, however, such a program would mean nothing of the kind. On the contrary, it is at least theoretically possible that the total annual river flow into the ocean would be increased, because such a program would not stop the flow of water into the sea, but simply divert it so it would flow in underground channels for a considerable distance and then reappear in the form of clear, steady-flowing springs, brooks, creeks and rivers.

The prompt diversion of water into underground veins by insoak would tend to reduce evaporation losses. Hence it is reasonable to suppose that the total flow would be increased instead of decreased. This calculation, of course, would have to be modified in figuring the absorption of water by growing crops. That part of the process would be all to the good.

Since there are so many variables, such as soil structure, slope, soil texture, organic content, temperature, types of vegetation, etc., probably it would be fruitless to attempt detailed measurements.

Dr. H. H. Bennett cites the case of the south fork of the Palouse River, Pullman, Wash., as showing how man can upset Nature, then mend his ways and get back to natural insoak. The valley had been flooding every year because of plowing. The river had no fish, and it dried up in summer.

Conservation treatment was adopted, featuring grasses and legumes to weave a protective vegetable mat over the exposed plowland. Less than half-the farmers co-operated, but that was enough to

make a great change, At the last available report there had been a consecutive years with-out floods. Trout came back into the river for the first time in 25 years. Old dead springs came to life and

Jay N. "Ding" Darling, noted conservationist, cartoonist and Chief of the U. S. Biological Survey during the 1930's, cites parallel cases at Antelope Valley in Nevada and in a large area of North Dakota. In both instances over-grazing had bared the soil and caused gullying, and the springs dried up, After protective measures had been established the water holes came back, springs were revived and vegetation flourished.

Water Evaporates

It is obvious that when cultivated or bare-soil fields are saturated with water from the clouds, and there is a plow-pan or other barrier against prompt insoak, the wa-To show that this hydrologic eysun. Hence it is reasonable to supcle isn't just a bit of gobbledegook pose, in the lack of tangible measurements, that improved insoak will mean not only more water availmean not only more water available to growing plants but a larger total flow into rivers, assuming average geological conditions.

It is obvious that creeks receiving all their water from springs could not possibly cause floods, and the equalization of flow in phase of the hydrologic cycle should cause rivers to flow clear, with-out extremes of flood or dried-up channels, throughout the year.

Equalization of the fourth phase of the hydrologic cycle-the flow back toward the sea-is what has been left almost entirely out of the calculations of flood control efigineers, who have dealt almost exclusively with abnormal flows and large-volume impoundments. Here is where the subway route becomes

It has been emphasized by hy-drologists, for instance C. G. Paul-sen, chief hydraulic engineer of the U.S. Geological Survey, that there

sheet" of intake and output of wa- there was a fairly heavy flow ter in the soil.

cial resource, must be kept in balance," he declares.

In the long run water must be returned to the soil as fast as it is taken out and it is also desirable that it be taken out fast enough so there will not be an excess. As a general rule, the water table of the primitively natural state should be restored.

Nature somehow has always had a way of establishing her own optimum pattern, which accomodates Nature Builds Up itself to variables mentioned above. When the pattern is greatly disturbed, harm is likely to occur, either from deficiency or excess of water, or from seasonal extremes in either direction. Man's interference with the pattern is worst of all.

One of the commonest stories you may hear from a few surviving pioneers of the old days of the Mississippi Basin is that a great change has taken place in the river sys-tems of the Great Plains.

Before the white men came in ers were narrow, deep, clear and constant. Fishing was excellent. Springs were abundant and they fed creeks which likewise ran clear the year round, discharging into the

been geologically stabilized after pond building and reforestation. the primitive process of scour-andfill which created fairly uniform gradients and channels. They were bordered by trees and vegetation. If there were floods, they were necessarily much milder than those of modern days, as demonstrated by the runoff statistics of the Red Plains Experimental Farm, The floods slid harmlessly over the vegetative mat and subsided, producing little harm.

Now the streams are enormously widened, choked with silt, with exwater, produced by the fast runoff in gullies, spills over on flanking bottomlands, depositing sand and choking out crops.

lated and sometimes rendered use-

Cumulative Process

It is a cumulative process. The more the flood-water is spread over the bottomland, the shallower it is, and the shallower it is, the more it is slowed up. The more it is slowed up, the more silt it deposits.

Obstacles in the form of trees, brush, vegetation, embankments and other factors on the flood plain accelerate this dire process. The presence of a downstream reservoir, as inentioned previously, is perhaps the worst menace of all, because of the chain-reaction backwater sedimentation.

Occasionally you hear someone

floods isn't new. It was always here.

it is easy to demolish the evident purport of this thesis, historically Not So Desperate

and geologically. We know from living witnesses geological point of view, we also states have experienced a marked know, from the studies of soil conlectronic authorities, that when the country was first settled.

This publication conceded that there are cycles of "drouth a nation, the average soil tends to be there are cycles of "drouth a nation, and a post routh a nation, and a post routh a nation of the state of humus and other accretions. That applies to That humid areas, under normal conditions. There are exceptions, of Sometimes organic-laden prodigious quantities of water. soil is built up much faster. Sometimes it loses ground. However the average index.

"Assets of water, like the finan- and a gradual uplift of geological

tection in its own locality.

Nature, when its processes are not interrupted by artifical agencies, or exceptional conditions like those of Grand Canyon, builds up the soil instead of tearing down.

Some of the heaviest Grand Canyon erosion takes place in an area that receives only about 1 per cent as much rain as Cherrapunji. These extreme examples throw much light on the problem.

It has been shown by extensive research over a period of many large numbers, they say, these riv-years, at Red Plains experimental ers were narrow, deep, clear and Farm, that man can do even better than Nature by way of promoting insoak, if he will conform with Nature's pattern. That is by such devices as terracing, contour furrowing and break-up of the plow-pan. The banks of the streams had in addition to regrassing, small

> The hydrologic cycle, under modern scientific and engineering findings, becomes infinitely more than an academic study. It can be made an integral and essential part of flood control.

The failure of ground water supply is an indirect but shocking evidence of our failure properly to harness the hydrologic cycle. It has become a major concern in some areas. Lester Velle (in Collier's of May 15, 1948 and in Read-ers Digest of August, 1948) paints tremes of wet and dry. Because of a gloomy picture of that debacle, the fill-up of channels, the flood- especially in the arid or semi-arid regions, and also in some parts of the humid regions.

In one place in Arizona, water is being taken out of the ground 18 The once bottomlands are muti-times faster than nature replaces it, he says. Farmers in the Texas Panhandle in one year took out 750,000 acre feet but only 50,000 acre feet came in.

The water table under downtown Louisville was lowered 40 feet in 10 years. Baltimore had to reduce pumping during World War II so that salt water from the ocean would not intrude. Long Beach, Calif. has been fighting similar salt water encroachment from the Pacific, due to the lowering of the sweet-water ground supply.

In 1949 I talked with one of the officials of the Colorado River water supply organization. He was greatly agitated over situations like this which have caused 7 western and mountain states to wage desperate legal fights over the precious fluid flowing down the Pa-"This business of erosion and cific side of the Continental Divide. At Delano, Calif. the water table We have evidence of great floods dropped 220 feet in 20 years and taking place before the white man now wells are drilled as much as 1,200 feet deep in that area.

The situation elsewhere is not so and ample published records that desperate, according to "Science the prairie plowlans streams have and Appliance," issued by the been tremendously changed in Ohio State University Research character, Taking the long range Foundation, but even so, most

built up at a slow rate. It builds serious local shortages, particularperhaps one inch in 500 years, by ly where the demand for ground ter is greater than the demand. the publication points out, accompanies the coming of industry, which requires

Conservationist Everhart Says

Cover Crops Are Greatest Need

By MARION EVERHART Work Unit Conservationist **Big Spring Unit** Conservation Service

The need for cover crops in the District is the paramount need at this time. There are 76,000 acres included in the rotation often 000 acres in Martin County. There are no figures available locally, in the Martin-Howard district. The ture needed for the succeeding protective cover needed on this crop or you had to lay aside a part land is an adequate stand of grain sorghum, or summer legume, which must have already been planted and up to a stand at this time or a cover must be established this fall it pays to plant cover crops for by the sowing of small grains or soil improving purposes, winter legumes. Wind erosion is very costly to a

Adapted winter legumes for this area are winter peas or hairy vetch. The hairy vetch should be planted with Abruzzi rye is possible, but does well when planted with wheat or other small grains.

Adapted summer legumes are, cow peas and Guar for this area, both of which will provide ade-quate cover to prevent wind erosion next spring, if an adequate growth is made prior to frost and the crop is not harvested. Guar is a new crop to this area, but from all appearances it should be very valuable to the farmers here for soil improving purposes and for protective cover. Legumes are badly needed in this area to enrich the soil by replacing the minerals that have been drained from the land during the past years be-cause of the large acreage of soil depleting crops planted annually.

Organic matter is the key to successful farming operations and legumes and grasses are the best crops for this purpose as they add

many tons of plant food needed by plants for maximum production. Large yields are always the result of rich soils and abundant moisture available to the growing of cropland in need of protective enough to replace plant lood recover in Howard County and 377, moved annually. To fail to add as much as you take out is a form of soil mining. To plant a soil imfor Midland County, which is also proving legume as it took mois-in the Martin-Howard district. The ture needed for the succeeding of your cropland for this legume and thereby lost the use of the land. It is now known by many cooperators of the local district that

> farmer as the best of his soil and most of his plant food are blown away never to be used again. the organic matter of soils is very seriously lowered when land is allowed to blow. Then there is the increased fertility that results from cover crops, also the soil can stay alive if it is fed properly. There are millions of bacteria found in good soil that must have crop residue returned each year in or der to stay alive. Sandy soils or mixed land are tightened up when organic matter is returned to the growth of weeds occasionally returned to the soil enriches it greatly. Farmers should establish a conland at an early date if they have wheat crop.

Rex 168, Dept. YX Dalhart, Texas Agate for Feel Better.

Drouth Resistant Cattle

A wonderful combination is drought-resistant grass and drought-resistant cattle. Neither has yet been developed to perfection but about five miles north of Dallas on the range of the Texas Research Foundation is found what may be an approach to the problem, Santa Gertrudis cattle from the King Ranch and a proper blending of warm season grasses and legumes. Throughout the drought the experimental herd of 70 head of the breed developed through crossbreeding of Brahmas and Shorthorns has been steadily gaining an average of one pound a day on pastures seeded to King Ranch Bluestem, Sideoats grama, Switchgrass, Dallisgrass, Madrid and Hubam clover. The steers were received last fall when yearlings averaging 670 pounds. They now average 1,148 pounds and are not receiving any supplemental feed.

Soil Test Is Way To Increased Crop

There is no point in swapping even dollars. But, when you can land and become spongy. A good swap one for eight, that is good business. Mr. Ed Detrixhe, a Hemphill County wheat farmer made that servation cropping system on their kind of a swap this year on his

old fashioned to farm with a one Grist says it all started as a result crop system, which is designed to of a soil test, Mr. Detrixhe submitted a soil sample to the Texas sion Service Soils Laboratory and then carried out the recommendations on his farm. M. K. Thornton, agricultural chemist in charge of the lab, makes recommendations on fertilizer usage and cropping practices as a part of the soil test-

ing service.

Here is the story as reported by Grist. Mr. Detrixhe applied 30 pounds of nitrogen per acre to 80 acres of wheat and when he had

finished combining, he found that this field had produced an average of 35 bushels per acre against a 11 to 14 bushel average for the unfertilized acreage. That increase of better than 20 bushels per acre paid him \$8 in return for each \$1 spent for fertifizer, and Grist be-lieves the 35 bushels is some kind

of a record for dryland wheat. Considering that the average Texas farmer last year made an average net return of \$4 for every \$1 spent for fertilizer, Ed Detrixhe did exceptionally well when he doubled this figure, says Grist. It goes without saying, adds Grist, that Mr. Detrixhe is sold on soil

testing.

Local county agents can supply information on how to take and sub-mit soil samples to the laboratory

Healthy Personality Is Important Thing

All parents want their children to develop into healthy personalities. oise Johnson, family life education specialist with the Texas Agricultural Extension Service, explains that personality is the term used to describe the whole person, the way he reacts to outside influences and the way he thinks, feels and be-

The specialist points out that this personality or whole person, is made up of an inherited basic structure plus the effects of training, knowledge, experiences and information plus family and community relationships and experiences.

The first factor in a healthy personality is the inherited basic structure. Physical, emotional and nervous systems and patterns can be anged very little. The big job is to realize this and help children to accept this fact. Lead them to

to accept this fact. Lead them to live with themselves so they can grow into healthy personalities.

Much can be done about the sec-ond factor in building personali-ties. Mrs. Johnson suggests that children be given wide opportunities in the home, school, church and community to get sound practical training, experience, knowledge and training, experience, knowledge and understanding for the real tasks of living. This leads into the third factor, relationship with others. This two-way relationship is first experienced in the home. Family members continue to be the most important group which influences permanuels. Failure to provide room.

Homemakers, by knowing the approximate amounts of fresh vegetables or fruits needed to fill a pint package for freezing, can save time and money when purchasing or preparing food for the home freezer or the food locker box.

National Farm Safety Week will be observed from July 20-26. It's a mighty good time to take an inventory of the accident hamrds around the farm. Find them and remove them. Last year some 14,500 rural residents died from accidents.

Don't let an accident rob you and your family of this year's crop.

Cattle Need Some Shade

Livestock and poultry if given proper attention during the hot summer months, will produce profits for their owners. Our domestieated animals, says Dr. C. M. Patterson, veterinarian for the Texas Agricultural Extension Service, must depend on man to provide them with comfortable surroundings. If proper attention is not given, the animals suffer and down goes production.

Especially important, says Pat-terson, is a continuous supply of cool, fresh water for all animals and poultry on the farm. The loss of moisture from the animal's body in hot weather is rapid and heavy and unless water is available josses are sure to occur. These losses show up in lost weight, a drop of milk production by the dairy herd or in the case of poultry, a drop in egg production.

Of almost equal importance says the veterinarian, is the need for plenty of ventilated shade. Circulation of air is needed under the shade or in poultry houses to remove the moisture being giv-en off by the animals. The me'sture content of the air is more important than the actual temperature in cooling the animal's body. Heat exhaustion is just as likely to occur in humid, stuffy, though shaded places, as in the sun. Don't overcrowd birds or animals, warns Patterson, for it prevents body heat loss and interferes with ventilation.

Supply feed, he says, in accord-nce with activity so that breeding, dairy, work animals or poul-try don't become too fat. Keep animais in a thrifty condition and don't forget that salt is essential in body heat regulation and should be supplied in adequate amounts

Animals should not be driven about or forced to exercise dur-ing the hot part of the day nor should anything be done to excite

maggots. Failure to provide com-fortable surroundings for livestock

Big Spring

The latest suit was filed in 99th District Court by Nancy Brown, a Lubbock County widow who is asking, judgment of \$182,000 in damages. The first suit was filed in 72nd District Court by Alice M. Nelson, also a Lubbock County widow, who asks judgment totaling more than \$126,000.

Both suits concern several water wells which the City is operating on property adjoining the plain-tiffs' land and on the Panhandle Santa Fe Railway right of way which crosses the plaintiffs' prop-

Mrs. Brown alleges that the City is liable for the cash value, and in the alternative, the intrinsic value of 300,000 gallons of water which she claims has been taken by the city since their wells were put in operation. The cash market value is \$21,000 while the intrinsic value of the same is \$30,000. The plaintiff also asks damages of \$150,000 for the decreased value

of her 320 acres of farming land because of the loss of the underground water supply.

In the last two years, Mrs. Brown continues, one of her wells has been so depleted so that it now pumps at the rate of 250 gallons of water per minute, where it formerly pumped 1,000 gallons a minute. For the increased cost of pumping, caused by this decrease in pressure, she asks \$1,000.

Judgment will also be asked for damage to this year's crops, but the plaintiff claims the exact amount cannot be determined at the present time.

In both actions, the plaintiff has asked that the City be restrained from operating several of the wells until the case is settled.

RAINFALL

(Continued From Page 5)

its and at the same time confer a great favor on the nation at large.
As mentioned before, a 4-state

region of the U.S. Soil Conservation Service has found, by extensive and intensive research, that good conservation practices immediately increase crop yields by 32 per cent. That is where the "horn of plenty" directly helps the individual farmer.

After the farmer has taken what is needed of the water insoak, the surplus gets into the lower veins and is transported down the slope toward the sea in orderly manner and at slow speed. This raises the water table and becomes a great benefit to the whole population, ru-ral and urban. Simultaneously this storage of water in the ground-which has a tremendous potential that dwarfs the impoundment capacities of all the big surface reservoirs—prevents the water from washing over the surface and forming floods.

What this country needs, most of all, in the agricultural production scene, is to divert the fourth phase of the hydrologic cycle so that we hold back that 25 per cent rushing down toward the sea over the surface. Divert it into the ell, county agent, said.

Weather Guide

Dr Irving P. Krick, one of the world's foremost meteorologists and cloud seeding experts, demonstrates the weather guide, the best weather forecasting instrument ever designed for amateur forecastars. Based on the idea that the two main factors in a successful weather forecast are cloud conditions and wind direction, the inweather forecast are cloud conditions and wind direction, the instrument was perfected by Dr. Krick and his staff after they had analyzed more than 40,000 wind and cloud combinations and had worked out a successful forecasting formula for the seven climatic regions of the United States for which the weather guide is designed Dr. Krick is president of the Water Resources Development Corporation with which Howard County, through its membership in the West Texas Weather Improvement District, has a cloud resource contract.

Osage Hills Rangelands Not Touched By Brought

from the Osage Hills country of Oklahoma where many, West Texas cattle have been grazed this year, and an area in which West Texans including Morris Patterson and Robert T. Piner of Big Spring have bought ranches because of drouth con-ditions here.)

PAWHUSKA Okla. (SC)-Movement of an estimated 175,000 head of Osage County beef cattle to feed lots and markets is well underway having been started about two weeks ago, but ranchers say the movement is normal and not the result of the drouth that is plaguing many of the nation's grazing areas.

The seasonal movement of catthe seasonal inventor of the from the Osage Country is expected to continue until around October 1. Many will go into the Corn Belt feed lots for fattening. Some will go to markets over the Southwest and others direct to slaughter houses.

"It is a little dry, but when you compare the Osage to other areas we are in pretty good shape," J. B. Smith, who has just wound up his term as president of the Osage Cattlemen's Association, said.

Many of the cattle are moving through community sales held each week at various points in the county.

Despite the dip in livestock prices because of pressure of heavy selling from drouth areas, the Pawhuska community sale ran up a otal of more than \$200,000 week ago. Hominy's community safe has come close to that figure, and heavy selling has been reported at the Fairfax sale.

Osage ranchers generally are optimistic about the livestock outlook and are getting ready to winter normal herds, which will total about 75,000 to 90,000 breeding cows and 25,000 steers, A. A. Sew-

good for the Irgest numder of peo- range conditions, which continued through the summer in spite of a June drouth, caused cattle to make normal gains.

"The cattle made a good gain in Dairymen will lose efficiency in the spring and were off to a good production of milk if they fail to start," Sewell said. "The grass is

generally pleased with conditions, except for the lower market.

"We have really been a favored spot in Oklahoma this year,"

their ponds are deep. There is still ample water is the deep ponds on the ranches, although shallow ponds have dried up. Smith said new cattle grading

regulations are resulting in more Osage steers going to feed lots this summer than in prior years. Usually many steers, fat from the blue stem, go directly to market. There also is considerable movement of calves born last fall and winter.

winter.

Drummond said he considered this summer "normal" for the this summer "normal" for the Ocage. Heavy rains which began in 1948 and extended through 1951 brought about normal conditions, he pointed out.
