Coleman Wins National Title; Takes Aim For 1980 Olympics

Mike Coleman of Ackerly, Texas, has returned from the Olympic National Sports Festival held in Colorado Springs, Colorado, from July 27th through August 1st. Thirty-one hundred contestants entered in thirty-one different sports were there. These contestants were gathered there from all over the United States. They were divided into four color groups. The Midwest contestants were dressed in yellow for the opening ceremony. Easterners were

dressed in blue, and the Westerners were dressed in green. Contestants from the South were dressed in red. All 3100 contestants, coaches and officials marched into the stadium while the Air Force Academy Band played. The Olympic Torch was brought down from Pike's Peak, a distance of over forty miles, by former Olympic Gold Medal winners. The first of these runners started early in the morning of July 26th, and arrived to start the Olympic flame about 8:00 p.m. This flame burned

throughout the contests. Ronnie Milsap, the Country-Western singer, appeared there to sing the National Anthem and "America". It was a very impressive ceremony.

The contestants were flown to Colorado Springs at the expense of the olympic Committee. They were housed at Colorado College and bussed to their various places of competition.

Mike won the Gold Medal competing in the International Clay Pigeon

con't to p. 2

Coach Maxwell and Coach Roemisch are already at work planning the 1979 Coyote Football program. They got many new ideas for training and plays at Coaching School that they hope to implement this season.

Football Begins Monday

Athletic Physicals Friday

All boys who plan to participate in any UHL sport at Borden County High this year should report for a physical exam Friday, August 10 at 1:00 p.m. at the High School. Those not receiving physicals at this time must get one at their own expense before participating in any sport activities.

Football Begins Monday

Football practice for the 1979 edition of the Borden Coyotes will kick-off with workouts at 5:30 each afternoon beginning Monday August 13. On Mon.-Wed.-Fri. from 5:30-6:00 will be weight training and on Tuesday-Thursday the time

will be spent in a classroom situation (skull session to you old footballers). Each evening at 6:30 the practice session will begin on the practice field. Everyone is invited to attend any of the practice sessions.

The first scrimmage of the season will be at Sands on Thursday August 23 at 7:00 p.m. The second scrimmage will be against Greenwood here on Friday August 31 at 7:00 p.m.

The Coyotes are looking forward to a much better season this year. Returning 10 offensive and 10 defensive starters the Coyotes have the nucleus for a good team. After a good off season program and lots of rest during the summer all the Coyotes are looking forward to the new season.

MIKE COLEMAN

Coleman

con't from p. 1

(or International Trap). All of the shooting sports were held July 27th and 28th. The contest was based on 200 targets, 100 targets a day. Mike broke a perfect score of 200 out of 200. The World Record in a 199 out of 200, but there has to be at least 22 countries participating in a shoot to set a new world record. A National record could be set here; so Mike has a National Record with his 200 straight.

The shooters had three days of practice before the final shooting days. It was raining the first day that Mike shot and he dropped two targets to wind up with a 98. On the next two days, he broke 100 targets each day. He wound up the whole shoot with 498 out of 500, a very good score, almost unbelievable in International Shooting.

Mike plans to try out for the Olympics to be held in Moscow in 1980. The Try-outs for International Trap and Skeet will be held in San Antonio, Texas, in May or June of 1980. With God's help, a lot of hard work in practice and competition, and some very good luck, Mike is going to try very hard to be one of the two people to represent the United States in International Clay Pigeon in Moscow in 1980.

Developing 4-H Leaders While Leading

All 4-H leaders are making a contribution in helping boys and girls grow to be responsible, creative, worthwhile adult citizens. It is through adult leaders that vitality and strength are given to the 4-H program.

Some adult leaders, however, are busy all the time trying to carry the full load of club leadership and fail to make use of an important source of help—the junior leader.

"Blessed is the leader who develops leaders while leading." This added benefit to 4-H Club work can come through careful planning by the adult leader, junior leader and club members.

Borden County Extension Agents, Kathy Blagrove and Sam Field encourage adult leaders to "look at the potential junior leader. He is the older, more experienced, more mature member. He wants to share with others the experience and knowledge he has gained in many phases and activities on the 4-H program."

This older 4-H member is seeking additional opportunities and incentives for self-development. Through his efforts, more young people will have a chance to be 4-H members with more projects and activities available.

Through his involvement, the junior leader will, in fact, be challenged to greater accomplishments and longer 4-H membership himself.

A meeting of the Borden County Adult Leaders Association will be held Monday, August 13 at 7:30 in the County Show Barn. The ALA is an organization not only for leaders, but for all-concerned parents. The more parents are involved the more the youngsters will be involved. Besides, we need your ideas and support. Also, being involved in the ALA will help you find out what is available for your child. Each family is asked to bring a freezer of ice cream or some cookies. Drinks will be provided.

Congressman

Charles W. Stenholm

Congressional Comment

Washington, D.C. — Much of America's economic development in the early days of the Industrial Revolution can be attributed to the building of the railroads. Railroads are a safe and reliable form of transportation that could run in almost any kind of weather. During the latter half of the nineteenth century, owning a railroad was a sure road to wealth. European monarchs would pour millions out of the public coffers into American railroad stocks. Corporate wars were fought by robber barons over control of this transportation system.

Looking back on the history of the railroads it is hard to imagine that this once-thriving industry has fallen on such hard times. The idea that some railroads would one day become nationalized would have been considered heresy just 20 years ago. Railroadings has been in decline and our whole economy is suffering because of it. This industry has been subjected to an extensive rate and service regulation system administered by the Interstate Commerce Commission. The ICC has been slow to act on numerous important cases, and often companies were not allowed to make a reasonable profit. Over the last several years the industry's rate of return has been around 1%, among the lowest for any economic sector in the Nation.

Not all of the blame, however, can be placed on the government. Railroads have lost much of their business to subsidized trucks, airplanes, pipelines, automobiles, and barges. The railroads did not stop growing because the need for passenger and freight transportation declined...that grew. The railroads are in trouble because often the need was not filled by the railroads themselves. Management has not been responsive to competition and has not shown a willingness to enter the 20th Century and compete. Labor is also to blame. Some labor rules that are in effect today date back to World War I. Prominent among these were rules

of the "100-mile day" and other featherbedding techniques such as the use of firemen. The 100-mile day refers to the option open to train crews to elect to be paid a full day's pay for working eight hours or for operating a train for 100 miles. The two methods yielded roughly equivalent results in the World War I era, but today many trains cover much more than 100 miles during an eight hour period. By the late 1950's the transition of locomotives from steam to diesel was nearly completed but firemen have remained on many trains.

As this industry has become cash starved, services have declined and capital improvements have been delayed. A particularly critical area is the rail car shortage. The rail car industry reports a backlog of 50,000 cars. Also, a tremendous backlog has built up in the maintenance and capital improvement of roadways and equipment. The shortage is particularly severe during intervals of unexpected demand or peak demand periods. Our farmers have produced an unexpected large grain crop. Many of our elevators are full and wheat is being put on the ground because transportation facilities are inadequate. Farmers and elevator operators are unable to receive payment and their loans are running out. Because the shortage is nationwide we have few options in the short term. But eventually it is going to be essential that we formulate a national railroad transportation policy.

If we do not adequately support our transportation services then our ability to market our produce will be limited. In this era of energy shortages and environmental concern, it is time we rediscovered that safe, reliable form of transportation that has helped build our industrial capacity — the American railroad. The time is now to begin solving its inhibiting problems.

The average pencil has enough graphite to draw a line 35 miles long.

Maid of Cotton applications are needed

Maid of Cotton entrance applications should be filled out and returned to the Lubbock Chamber of Commerce no later than 5 p.m., Sept. 26, with the actual selection of the Maid being held Oct. 26 and 27.

Yandell Howard, committee chairman, stated any interested girl between the ages of 19 and 23 that has never been married, born in a cotton producing area, and 5 feet 5 inches tall or taller may contact the Lubbock Chamber of Commerce for an application.

Read to children

AUSTIN, Texas (Spl.) — If Johnny has trouble reading, chances are his folks don't read at home, says a University of Texas assistant professor of curriculum and instruction.

"If the parents don't read at home, whether they can read or not," says Dr. Walter Lamberg, "there's no model for the children to read." But he adds "if there is a good positive model, children will start, well before school, doing things that are associated with reading and that prepare them to read."

In a similar vein, one of his colleagues, Dr. Frank Guszak, suggests that being read to is an important step in teaching a young child to read. Children who are read to, Dr. Guszak says, are ones who seem to succeed in reading.

The first practical typewriter was invented in 1868.

New Yield Law

Frontage road traffic on Interstate and other multi-lane highways must yield to traffic leaving or entering the main lanes. That is the new law which becomes effective August 27, 1979.

House Bill 1421, passed by the 66th Legislature and signed by the Governor on June 11, 1979, provides that frontage road traffic shall yield the right-of-way to traffic entering an on-ramp

or leaving an off-ramp on controlled access highways. It also applies to rural areas where two-way frontage roads exist.

The change may cause problems on two-way frontage roads for motorists who have grown accustomed to main lane traffic doing the yielding at exit ramps. A problem could be in store for other frontage road drivers who think vehicles about to enter the main

lanes must yield.

Although the State Department of Highways and Public Transportation will have new YIELD signs in place by August 27, the habits already formed will be difficult to break. Careful observance of highway signs will continue to be very important during the re-development of frontage road driving habits.

Gas rationing predicted soon

AUSTIN, Texas (Spl.) — A University of Texas expert on energy resources has a dire prediction for America's gas-guzzling way of life: Permanent gasoline rationing two years from now.

That outlook is voiced by Dr. Samuel P. Ellison, who says the energy crisis is here to stay because current energy resources are finite and nonrenewable.

"The 10 gallons of gas you put in your car last week are gone — forever," the UT geologist says.

Among his suggestions for coping with the crisis are developing alternative energy sources (such as solar energy, which is renewable), conserving existing energy and controlling world population.

O'Donnell ex-students make plans

Plans for the O'Donnell Ex - Student Association's part in the September Homecoming have been announced.

Nancy Mott, secretary for the Association, said Homecoming is planned for September 21 and all former students of O'Donnell High School are invited to attend.

Activities include a parade and Pep Rally during the afternoon with the Banquet scheduled for 6 p.m. in the High School Cafeteria with the Class of 1929 and Clas of 1954 being honored.

The football game between the O'Donnell Eagles and the Borden

County Coyotes will follow the banquet.

There will be a reception for all Ex - Students in the cafeteria after the game while the Class of 1954 will have a reception at Mrs. Carl Sanders and the Class of 1929 will meet at the Senior Citizens Building after the game.

"As a general rule for the area, irrigation water applied to High Plains cotton now will not be a paying proposition."

That's the firm opinion expressed to Plains Cotton Growers, Inc., Lubbock, by Dr. James Supak, Area Cotton Agronomist with the Texas A&M Research and Extension Center in Lubbock.

"Additional water at this time, except in a few areas of the Plains where moisture is well below the average, has only a slight chance to improve yields and a very good chance to hurt both yields and quality," Supak believes.

Watering after August 15, even on a normal crop rarley pays, he says, and in terms of development the crop this year is one of the latest on record.

A high percentage of the cotton on the Plains has sufficient moisture to mature all blooms appearing by August 15, according to Supak, and research in the vicinity of Lubbock has shown that on average there is only a 36 percent change of maturing bolls from blooms that set on August 20.

A 1965 through 1978 study by now retired agricultural meteorologist Oliver Newton and Dr. Don Wanjura, USDA's agricultural engineer at the Lubbock experiment station, shows that August 15 blooms made mature cotton in 10 of the 14 years. August 20 blooms, however, made it to maturity in only five years, or about one time in three.

"The only reason for irrigating at this time would be an attempt to save August 20 and later blooms," Supak states, "and a one-in-three chance that such an attempt will be successful is more than offset by the likelihood that additional moisture will retard or even prevent full development of the bolls set earlier."

On crop prospects, Supak agrees with other observers that ultimate production is largely dependent on September weather. Although the crop has made excellent progress, he thinks "it's a long way from being out of the woods."

Based on reports from county Extension agents in the 25-county area served by PCG, Supak has settled on about 4 million standing acres of cotton - 4.5 million planted, 500,000 lost to the elements.

"Putting it all together and assuming normal weather for the next two months or so," he concludes, "right now I have to expect a yield of about 300 pounds per acre or around 2.5 million bales from the 4 million acres."

Your County Agent Says By Sam Field

Vaccinating beef herds to protect them against infectious diseases is a vital step to a profitable operation.

Diseases may cause sickness or death in calves as well as death or abortion in pregnant animals.

At four months of age, vaccinate for blackleg, malignant edema, novyii and sordelli with a 4-way vaccine. Other vaccinations may be needed such as IBR-PI-3, lipto or redwater if these have been a problem. Booster shots in 1 year are needed for replacement animals.

If the first injection is prior to three months of age, a second shot at 7-8 months to stimulate immunity is recommended.

A modified live virus intranasal vaccine at four months will help prevent infectious bovine rhinotracheitis (IBR) and parainfluenza. No booster is required for these diseases. The intranasal vaccine can also be used in cows and heifers to help prevent the disease or in the face of an outbreak.

Vaccinate beef and dairy heifers at two to six months for brucellosis in high risk areas of Texas. Vaccination of adult cows with Strain 19 vaccine can now be used under veterinary supervision in problem herds.

Vaccines are also available to prevent anaplasmosis, vibriosis and bovine virus diarrhea. Vibriosis vaccine is generally recommended for all breeding animals with natural service whereas anaplasmosis and BVD should be used on the advice of a veterinarian.

The principal diseases causing abortion in Texas are brucellosis, bovine virus diarrhea, infectious bovine rhinotracheitis, leptospirosis, trichomoniasis and vebriosis. Anytime an abortion is suspected or an aborted fetus is found, an early diagnosis of the cause is essential. Livestock producers can prevent additional losses by contacting their veterinarian immediately. Blood samples, tissues from the placenta or aborted fetus, plus an accurate history of previous vaccinations and management are all needed to help in a diagnosis.

Producers should contact their veterinarians who can give advice on herd health programs designed to prevent disease. The Texas Veterinary Medical Diagnostic Laboratory is staffed and equipped to assist the veterinarian solve livestock health problems.

Nutrition Workshop

Four-H Foods and Nutrition leaders from Borden County are encouraged to attend a September 8 and 9 weekend workshop at the Texas 4-H Center near Brownwood. Assistant-County Extension Agent Kathy Blagrove notes that the workshop will include a wide variety of 4-H Foods and Nutrition project helps for Teen and Adult leaders. Topics to be covered are:

Teaching Methods; Weight Control; Conditioning Exercises; Method Demonstrations; Food Show Preparation; Record Books; and Recreation. Instructors for this workshop are: Mrs. Mary K. Sweeten, Extension Foods and Nutrition Specialist, College Station; Iris Kalich, Area 4-H & Youth Specialist, San Angelo; and other 4-H and Adult and Teen Volunteer Leaders who have successful experiences in 4-H Foods and Nutrition Activities. For further information and registration details, those interested in participating may contact Mrs. Blagrove at the Borden County Extension Office located in back of the Court House or phone 856-4201. Educational programs conducted by the Texas Agricultural Extension Service serve people of all ages regardless of socio-economic levels, race, color, sex, religion or national origin.

HEAT may help cool off Texans

AUSTIN, Texas (Spl.) — A University of Texas program known as HEAT may help Texans keep their cool about energy.

The Home Energy Analysis Training program, developed by UT's Center for Energy Studies, teaches a variety of persons throughout the state the skills necessary to advise homeowners of the "how" and "why" of residential energy conservation. Such persons may be utility personnel, building contractors, architects, engineers and real estate appraisers, among others.

The idea is that conservation can be encouraged by providing homeowners with enough data to judge the usefulness (and savings in dollars) of energy conservation options.

REMARRIAGE-- AND THE FAMILY

Remarriage is a challenge for the new lovers as well as the newly-formed family.

Immediate harmony applies to few families.

Such little things as what to call "him" or "her" surface.

Research suggests an easy way to handle this -- call the new parent by his or her first name or a name other than what a natural parents is already called.

ALL PARENTS HAVE PLACE

Remarriages don't replace people.

Both the new stepparent and the real parents have a rightful place -- and all should retain their identities.

When replacement is expected, trouble with children and the displaced parent can likewise be expected.

SHARE FEELINGS

Shared feelings and frustrations will make the newly-formed family more comfortable with each other than almost anything else - but this is difficult at first.

Remarriages are like learning to live among strangers.

Tension, anger, frustration and guilt are perfectly normal reactions in newly formed families -- these even "crop up" in long-established families.

LET LOVE GROW

Love will grow when it is given the chance -- and that takes time and patience.

Demanding or expecting love from a stepparent or a stepchild is frustrating.

Rather, use each situation to promote discussion, sharing and unity.

Discourage any situation which would cause family members to "take sides."

A family busy with unity-building will allow time for love to grow among members.

DISCIPLINE-- A SLOW PROCESS

Discipline is often one of the first challenges of a new stepparent.

When rules are broken, the natural parent will usually handle the situation until the relationship between stepparent and child is established.

However, at that time, the stepparent can and should discipline the children, too.

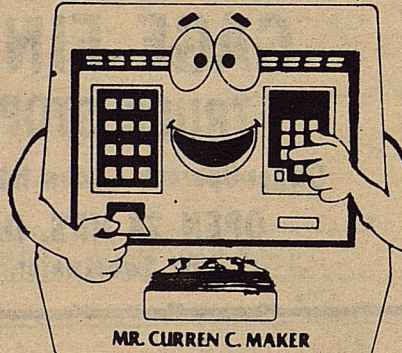

Stepparents should feel comfortable eventually disciplining the children.

LAST NAMES

As more new families are formed by remarriages, the old stigma of different names in one family receives less attention.

When family members feel good about their new family, it is easier to talk about the different names and people who live under one roof.

SALT II SYMBOLIZES DEFEATIST U.S. MILITARY AND FOREIGN POLICIES

The second Strategic Arms Limitation Treaty (SALT II) with the Soviet Union is a symbol of the phased surrender by the United States as it retreats around the world in the face of Soviet aggression.

SALT II is also a symbol of the unilateral disarmament and appeasement policies of the United States in the face of a massive Soviet military build-up greater than the Nazi effort just before World War II.

In the past twelve years the United States has deliberately cut back its Air Force from 935 strategic bombers to 414, its Navy from 300 major combat surface ships to 169; has frozen its strategic missile strength at the 1967 level; and scrapped all its missile defenses against both bombers and Intercontinental Ballistic Missiles.

As a consequence, the Soviets have gained a nearly 2 to 1 advantage in numbers of strategic offensive weapons; a 6 to 1 advantage in missile explosive power; a 47 to 1 advantage in major surface combatant ships and submarines; and over 4 to 1 advantage in tanks and artillery pieces.

SALT II would lock the United States into this inferior military posture.

The claim that SALT II would provide equality in strategic weapons is a cover-up of the true facts.

For example, to keep the Soviet count low, their Backfire bombers and SS-20 missiles are *not* counted in SALT II even though they could strike any target in America. Because of the numbers and power of the Backfires and SS-20s, this is like granting the Soviets an extra strategic air command!

And, to make the United States count look higher, we have agreed to count B-52s retired to the "bone yard" in the Arizona desert.

SALT II would also lock the United States into its policy of not defending you against missile or bomber attack.

The SALT II debate in the United States Senate will cover the full range of defense and foreign policy issues.

So, if you want to change U.S. policy of *peace through trust* to **Peace Through Strength**, send President Carter and Brezhnev a message by urging your Senators to vote against SALT II!

A recent poll shows that 80% of registered voters would oppose SALT II if they knew the facts in this ad. And, the poll shows that 88% of registered voters are *for* a U.S. strategy of peace through strength! So, we need your help now to pay for more ads like this to reach this overwhelming majority.

PROPOSED DETERMINATIONS FOR 1980 CORN AND GRAIN SORGHUM

The Secretary of Agriculture proposes to make the following determinations with respect to the 1980 crops of corn and grain sorghum:

- the amount of the national program acreages;
- the reduction from the previous year's harvested acreage required to guarantee established (target) price protection on the total 1980 planted acreage;
- whether there should be a set-aside requirement and, if so, the extent of such diversion and the level of payment;
- if a set-aside or land diversion program is required, whether a limitation should be placed on planted acreage;
- the established (target) prices;
- the loan and purchase levels for 1980 crops of corn, sorghum, and soybeans; and
- other related actions such as: Commodity Credit Corporation minimum sales price, commodity eligibility, storage requirements, premiums and discounts and other provisions as may be necessary to carry out the programs.

Before reaching his decision, the secretary will consider any recommendations and views regarding the proposed determinations.

To be assured of consideration, all written comments must be received no later than September 18, by the director, production adjustment division, ASCS, USDA, Room 3630-S, P.O. Box 2415, Washington, D. C. 20013.

SET-ASIDE REMINDER

Set-aside acreage must be devoted to an approved cover or practice that will effectively protect the acreage from weeds and erosion by wind and water. The acreage cannot be harvested by any means other than by grazing after September 1, 1979.

WHEAT PRODUCTION

All wheat producers are encouraged to bring in their production records for proven yield purposes.

DISASTER CREDIT

When a program crop is affected by a disaster to the extent it will not be carried on to harvest, you must file an application for disaster

credit on the affected acreage before plowing, grazing, or putting the land to any other use. If the crop is harvested you have 15 days from the date harvest is complete to file a request for low yield credit.

FARM RECORDS

Please notify the Borden County ASCS Office of any change in address, farming operation, or ownership.

NON-DISCRIMINATION

Eligibility for participation in all ASCS programs is established by law without regard to race, color, religion, sex, or National Origin.

PAUL HARVEY says,

"The farmer is the world's most stubborn optimist. He plants in hope, cultivates in faith, and ends in debt, then starts over with greater hope and stronger faith. Heaven help the family that depends on a farmer for support. Heaven help the Nation that doesn't have him to support it."

PUBLIC NOTICES

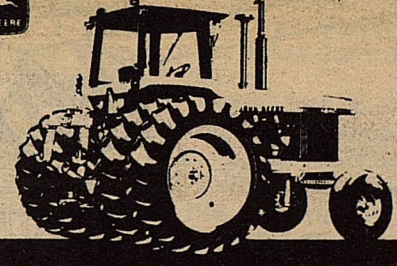

Legal Notice

BUDGET HEARING SETTING OF TAX RATE

This notice of the Borden County Independent School District Budget hearing is hereby given that a public hearing of a proposed school budget for the next fiscal year 1979-80 will be held in the Borden County School, Gail, Texas on Monday, August 20, 1979 at 8:00 P.M.

At the conclusion of such hearing the tax rate for the 1979-80 school year will be set by the Board of Trustees of the Borden County Independent School District. All interested citizens are invited to attend such hearings.

By Order of the Board of Trustees
