## THANK YOU

The American Legion Posts of Eastland County wish to thank the people of Eastland County who by their subscriptions to Capper's Farmer, American Poultry Journal, and The Breeder's Gazette have made it possible for us to own 4 wheel chairs and two pars of crutches.

These wheel chairs and crutches are for loan without charge to the people of Eastland County except for any expense incurred in transportation. In order that they may serve more people, a time limit of 60 days has been placed on this equipment. We do not wish misfortune upon anyone, but sincerely hope this equipment will be used when needed. This campaign is now completed.

## Sudden Death on the Loose Again . . .

. is the proper editorial account of what is going on all around us. More than 36,000 persons are expected to die in the United States in 1946 resulting from traffic accidents, with an added loss of near two billion dollars in property. Mechanical faults, old cars, worn-out equipment and highway deterioration are some of the factors contributing to these losses. We recommend adequate public liability, property damage and collision insurance as a partial protection against these unpredictable disasters. Don't wait. Do it now!

### Production of new electric refrigerators is still far behind the tremendous demand. Dealers are trying to see that war veterans, families with children and others who have no automatic refrigeration get the first call on new electric

refrigerators

Until you can have one of these fine new electric refrigerators delivered into your home to replace the refrigerator which has served so faithfully. take good care of the one you have In the meantime, keep in touch with your electric refrigerator dealer He'll help you get better service from your present refrigerator and keep you posted as to when you can get a new electric refrigerator with the many improvements

The new low electric rates mean that you can operate your electric refriger ator at still lower cost, right at a time when the cost of living is going up.

## WHY PASTEURIZE MILK?

-Boiling point. Milk properly pasteurized is never boiled. Boiling damages food elements and vitamins in milk. However, milk pasteurized at 143°, 200° as shown below, retains all food elements and vitamins, undamaged.

> Pasteurization temperature. Properly pasteurized milk is held at this heat for 30 minutes.

Milk heated to 120-140° F. for 30 minutes has all disease germs killed. This is heat necessary to kill undulant fever, typhoid, tuberculosis, and other germs.

Body temperature. Ideal conditions for bacterial

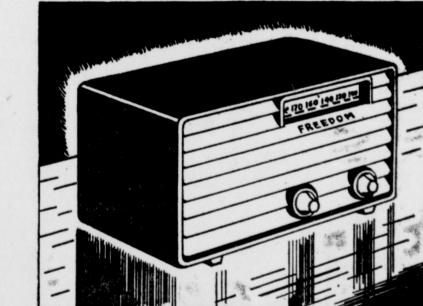

-Freezing point.

This chart shows why you should drink pasteurized milk. Only pasteurization gives you the protection you are entitled to receive when you buy milk.
