Underneath is a reproduction of his signature, which will hereafter appear on all paper money. Mr. Parker is oneeighth Choctaw Indian, and resigned as superintendent of the Armstrong Indian school in Oklahoma to accept this office.

PURITAN ANCESTOR

American People.

"Direct Action" and in the Western World Built on Empire-What He Accomplished.

New York. In a great many affairs ed detectives do not say, Cherchez le and Oliver Schreiner, succeeded in femme: they say, Cherchez the puri- working out a theory that it is man's Bible, is responsible for an extraordinary number of things that now afflict us. He stands in the way of a minimum wage, of Sunday baseball, of the uplifting of the stage, of the speedy solution of the white slave problem, the divorce problem, the saloon problem, the eugenics problem the 1 a. m. lobster palace problem and a good many other problems which, the theatrical managers on Broadway are aching to solve, but are not allowed to.

The cavaliers despised the puritan ancestor because he spoke through his nose. But that was a minor fault The real sin is that he refused to patentee of the conspiracy of silence to which all our ills are due, as concontinent where there is no conspiracy of silence on all these fascinating ing literatuse and drama and art, and we should have done away with the social evil, even as conversational people like the French and the Germans have done away with it.

Considering that the truth alone can be the basis of true progress and civilization it is astonishing how many things that whining, hypocritical puritan ancestor accomplished in his day In his original home in England he had not been going many years before he cut off the head of a king. sent another king packing about his business, and in other ways pursued a policy of "direct action" that should appeal enormously to W. D. Haywood. Crossing the Atlantic, he helped to lay the foundations of an empire. For spade, it is remarkable how well he could use that familiar agricultural implement. He used it to dig up the ungrateful soil of a rock bound, frost-bitten commonwealth. Later he shouldered his spade and, still speaking through his nose, but for the most part faithful to his conspiracy of siwestern prairies and the Pacific river ley. valleys, with occasional deviations to He was caught in the chimney of a bearing lands of Colorado and the Sierras. He did not lose the early habit of carrying his flintlock into five years later he was carrying it over a thousand miles of battlefield. In his own hypocritical way he called it a fight for free institutions against slavery. When the war was over he went back to farming and railroad building, persistent in his churchgo trolley tracks here, John L. Burman, a Evans at Somenos, near Duncans, ing habits and the traditional conspir-

The Princess
Who died D
Ya Broken Heart At exactly five o'clock the maid

knocked at the door of the Princess Sophia. It was a loud knock, for her highness had warned the girl she would sleep deeply. The servant made another noise, then crept away in the early dawn.

"I'll let her sleep till six," she whispered to herself. "Why should a royal princess get up at five Perhaps I misunderstood the hour."

Then she went below to the kitchen, where the half-dozen poorly paid servants of the impoverished prince of Saxe-Weimar were waiting to tell her the gossip of the household. She was a new maid, and poorly informed.

The Princess Sophia, it seemed, locked herself in her room every night with a tragedy. The tragedy concerned the ultimate necessity of royal houses-money; and that ultimate luxury of royal princesses-love. A hand some lieutenant had shot himself for the sake of the Princess Sophia in Athens five years before. He was so poor that the father of the infatuated girl, an impecunious fourth cousin of the Saxon monarch, refused to consider an alliance. And in Heidelberg that very day a young baron was lodged whose proposal had been rejected as decisively. The baron's father was the most influential banker in Germany: his contribution to the sinking fortunes of Prince Wilhelm of Saxe-Weimar would look like open barter: the grand duke himself had forbidden it. The second lover of the Princess Sophia was, in short, too

Her Heart Broken.

The kitchen gossips added many details about the royal girl whose heart had been broken under the iron discipline of her caste. She had looked rebellious of late. Five years before she had broken an alliance with a middle-aged, dissipated cousin, decreed by her relatives as worthy of ticed than Sophia was whisked off to On September 17 the timid limit her hand. There is a certain class of men, characterized by defective sense of humor and bovine dignity, who wear spats and side whiskers and make very positive, wide-embracing statements. "Women," e of these pompous wiseacres, "are more economical than men

it is a characteristic of the sex."

there are only two sexes he had even chances and happened to be as women certainly are more economical than men; but it is to suppose that men and women differ as to such emotions and tendencies as avarice, imprudence, thrift or improvidence. Such ctual qualities have no more relation to parenthood than they have piration and digestion.

ertainly each sex has its peculiarities, which, however, have to do ially with bodily structure and function. Such apparent differences re may be between mentalities of men and women are due to the nce of the different surroundings and duties which the established order demands.

Il of a species eat the same foods, have the same diseases and enemies evelop the racial individuality under identically the same conditions far as maternity and paternity are concerned. Consequently member of a species must exactly resemble every other member save particulars directly concerned with parenthood.

ong hair is not a manifestation of femininity. A daughter just as bly inherits her father's mentality as her mother's. Only the capacity otherhood descends exclusively in the female line.

ome day, probably beyond the Rhine, a psychologist will assemble osite male and female intellects and bread slice them into serial ns numbered in pairs, so they can be superimposed and compared. hould carefully mark each slice with an M. or F. Otherwise I am here would be no way to tell them apart.

But the question as to whether men or women are more economical een decided by common consent, for in America at least nearly al! ases are made by women-by the women of the house, the wife, er and general superintendent of the home. I think that if the small sign that is stuck up in the corner of the "Fine From \$1 to \$5 for Each Offense," was put on the door in large s near the sign "Join the Anti-Spitting Crusade," it would, perhaps, fore good. But who is going to do the arresting when there is no

One Excellent Recipe for Long Life

By F. H. BIGGS, Memphis, Tenn.

"Don't worry," was the recipe for long life recently given by an aged physician who had preserved his youth.

"Good advice, but impractical," you say. But did

ever give it a real trial? A person can't stop worrying merely by , "Go to, now, I am not going to worry any more." The more he about stopping the more impossible it is to stop.

There is a way, though. Don't consciously try to stop worrying, but aterested in something else.

If you have something to worry about and give yourself the oppor-, you will do a lot of worrying. But if you keep busy you won't worry a chance. When a great sorrow comes a person may simply don himself to it by letting his other interests lag. But by looking for something to absorb his attention he can put himself in a wholeframe of mind.

Worry can be fought the same way.

By FRANK FILSON.

Mary Seaton set down her full pail and stared over the distant hills. She had lived all her five and twenty years in the little, sordid settlement in the plains. Ever since childhood she had longed to cross the mountains which seemed to shut her in and press on her until they became Intolerable

She knew that beyond them no man had set foot, except the wandering traders and trappers of the northwest. There lay freedom. Perhaps it was one had survived the flood. from her half-Indian mother that she same fortunate accident that farmer, had lived in the vilage for 20 years. He was satisfied with his lot. He never wanted to go further -nor Joe, either, Joe who, at her famonth before

ing Monday.

"Mary!" called her father sharply.

Mary took in the pail and sat down to the cheerless supper.

The village of Elkwood lay in a valley, just below the new, huge government dam, now nearing completion, wherein all the head waters of Rock river fretted and surged. Soon they would be led out through a score of apertures to carry moisture to the thirsty fields. Mary hated the dam. because it would mean more self-satisfaction to Elkwood. With the new prosperity that it would bring there would be no hope that Joe would ever

take her away. And she hated the prison, of masonry, built at the head of the valley. it held imprisoned men who longed for freedom even as she longed for it.

ilization meant servitude, men whose whole lives had been warfare against this smug, self-satisfied society of the plains.

There was one man-a tall, lithe, dark-haired fellow, whose eyes seemed to her like those of a captive eagle which her father had once possessed. he was a trusty. Sometimes he drove the prison van down the hill, filled with its goods of prison making, to the railroad terminus. She knew that he was one of those untamed souls whose home lay on the other side of the mountains.

After supper Joe came-Joe, with his smooth, sleek face and air of ownership. He had not courted her-he had courted her father's favor, and her father had given her to Joe.

'You'll take Joe, my lass," he said to her. "He's a good farmer and has the best land in Elkwood. You'll take him next month.

Obedience had always been necessary to Mary, because she knew the ndred wore them. It is almost necessary, however, for women to wear futulity of rebellion. There was no of that type in order to keep them sanitary. Let me give you one refuge for her. She knew no other place than Elkwood.

> She went to bed and in her dreams she was with the eagle-eyed man of crashing world, and they two stood alone together upon the crests of the mountains looking northward over the

"This is our home, Mary," he said,

and kissed her. She started from her sleep. That crash had been no dream. It seemed as though the whole universe were roaring into ruin. There was the noise of a hundred avalanches. She had barely thrust on a few clothes when her father ran scream-

'Mary! Mary!" he yelled. dam's burst. God help us! The water will be here in twenty seconds!' Mary looked at him in quiet joy. The water! That meant the end of Elkwood, the end of all she feared and hated. It meant death, too, but death

ing to the door.

could bring no unhappiness. Suddenly, with the force of a battering-ram, the floods smashed down upon the house, and timber and stone went crashing into a heap of rubble and splinters. The floor yielded, the floods surged and swirled around her. Unconsciousness, black, barren, and all enveloping, took possession of her. Yet her last sensation was one of in-

She opened her eyes long afterward. It was daylight; the sun was rising over the plain and touching the tops of the hills with gold. She was lying upon a heap of what had once been beams and girders, but was now only a heap of wood, caught between two islands of masonry that rose out of the swirling flood. And all around her was water. Not a house was left in Elkwood. The valley had become a river; the stream had forced its way through the weak spots in the masonry and was roaring on its thousand-mile journey toward the sea. And where the prison had been was

only a pile of shattered stone. Suddenly she perceived something that made her heart beat quickly. Upon the other side of the pile of masonry lay the body of the prisoner. He lay there as if dead, his face pal-

stretched, while the water rippled round him. Painfully the girl crawled toward him. She bent over him, and, as she did so, his eyes opened. For a moment he stared at her, and then consciousness returned.

"The flood!" he muttered. "Where are they?"

lid as snow, his sinewy arms out-

"They are all dead." she sobbed, and all at once the sense of desolation came upon her. Her father, tyrannical though he had been, had been all she had ever had. And they two alone survived out of a thousand "I was with the wagon," he muttered. "The flood struck me. I knew

nothing more.' That was how he had escaped; as for those shut up in the prison, not inherited this love of freedom. Her saved him had saved the girl; the father, the hard-working old Scotch ruins of masonry had held fast and formed a barrier on which the floating debris had accumulated.

All day they cowered there, and by nightfall, when the water was ther's insistence, had wrung from her lower, they managed to wade to land. and unwilling "yes" to his suit a They had found a box of canned meats, and flour, but little damaged They were to be married the follow- by the water. While they ate he told her his story. He had been a trapper; he had been arrested on a charge What are you doing, lass? Dreaming of burglarly, trumped up by a store keeper with whom he had quarrelled, and sentenced to two years' imprisonment. He had served three-fourths of his time

> "Where will you go?" she asked. "Home," he answered simply, pointng over the mountains. His home lay there: the plains and forests were his and all the boundless prairies

his domain. He took her by the hand and they fared forth like two children. Each had an infinite faith in the other, for it takes two to make a home, and

Couple Were on Their Honeymoon.

"It is just as easy abroad as here to spot a bride and bridegroom," says a New Yorker who spends a lot of time on the other side. "An English girl know told me of a case in point.

'We tried,' she explained, in telling me of her railway experiences while on her honeymoon; 'we tried to keep the railway carriage to ourselves. But at Birmingham the guard opened the door, and, despite my husband's growls, lifted a small girl into our compartment, at the same time offering rather embarrass-

ing apologies. "'She was a little girl, about seven years of age. She sat on the edge of the seat and stared about her "'What's the matter?' asked my

husband. "'I don't see the birds,' said the little girl, as though disappointed. "'Birds-what birds?' asked my

husband. When I came from the other train your guard said to my guard: 'Oh, shove her along with the love

birds."

sons who know nothing about football should not attempt to describe the game. He writes: "A late novel by a Kansas author depicts a football game in which the hero is the shinning star. The score stands 5 to 0 in favor of the hero. Suddenly the quarter back of the opposing team skirts the end and eludes the whole hero bunch. He tears down the field like a flash and is within two yards of the hero's goal. Just then the hero comes to life and shakes off the tacklers and makes a few mighty bounds. The last bound is so fierce that he lands out in front of the flying quarter back and crushes him to the ground only a yard from the goal. That brethren, is some running even for a hero. Just why the tacklers of the offensive team were tackling the players on the defensive team the author does not state."-Kan-

Without Hamlet.

"So this is home-coming week in Hodgeville?" "Yes, but the only man who ever succeeded in putting this town on the map won't be here.

sas City Star.

"Unavoidably detained?" "Yes; he's in the penitentiary."-Birmingham Age-Herald.

"Who are we going to blame this wreck on?" "Anybody killed?"

"One man."
"Blame it on him, of course."

Easy Lessons in Cooking and Baking

By EMILY RIESENBERG

HOW TO BAKE GOOD BREAD.

Nothing is better than a good loaf of home-made bread, and once the simple rules for bread baking have been mastered, light rolls, and all kinds of coffee cake can be baked at home.

(When baking with compressed yeast it is well to immerse it in a cup of cold water over night, or at east long enough to dissolve. This eliminates the strong odor without impairing its strength, as the yeast germ ies dormant while under water. When ready to use, pour off the water; the east will have settled in bottom of up. Now add a spoonful of sugar. This awakens the process of fermentation and when yeast is added to the warm liquid, you have a reliable, sweet raising power which if treated right will never fail you. All ingredients must be lukewarm and dough kept in a warm place while raising. All measurements are level. Use a graded halfpint measuring cup and sift flour beore measuring. Do not pack flour into cup, just slide it in lightly and level off.

MILK BREAD.

Ingredients for Sponge. so there was no need for any fermal Four and one-half cupfuls of sifted bread flour.

One teaspoonful of salt. One tablespoonful of lard and butter. Three cupfuls of milk and water equal portions).

One cake of compressed yeast. One tablespoonful of sugar.

Soak yeast in cold water over night, or at least long enough to dissolve. When ready to use, pour off water and

Have ready four and one-half more then bake in moderately hot oven until cupfuls of sifted bread flour; begin to a toothpick comes out clean. stir this into the light sponge until dough clears from sides of pan, then knead in the rest of flour. From time Method. cover and let raise again until double bake as bread and when ready to serve to raise corn and grow stock for the bread pans and divide the dough into is a good way if fresh bread is to press a slight cleft down center of loaf or score top a very little with a raise again until near top of pan. Now bake in moderate heat until a golden color, and a toothpick when inserted comes out clean. Bread must be light weight and sound hollow when tapped so be sure to bake long enough. As soon as done remove from pan and set on wire rack to cool.

ALMOND LOAF CAKE.

Ingredients for Sponge.

Two and one-half cupfuls of sifted bread flour. One teaspoonful of salt

One cupful of warm milk. One-half cupful of warm water. One cake of compressed yeast. One teaspoonful of sugar.

Soak yeast over night, or long enough to dissolve in cold water. Method When ready to use pour off the water and add sugar to yeast, add salt to flour, add yeast to warm liquid and beat into flour, cover and set aside until it has raised to double its bulk.

Ingredients for Second Mixing. One-half cuptul of butter or good butterine.

One cupful of fine granulated sugar. Three eggs. One-half cupful of blanched and shredded almonds.

One-half teaspoonful of lemon ex-

Method Stir butter, sugar and eggs together for ten minutes, add to sponge and beat five minutes. (This is important as success depends on the stone plums, place skin down on beating.) Now add the almonds. lemon and flour gradually, beating as directed for peach cake. until light and fluffy: cover and let raise to double its bulk. When light pour into one large or two small, well greased tube molds and let stand half an hour; bake in moderate heat until a golden color and toothpick comes out clean. As soon as done invert on plate and sift confectioner's sugar

HOW TO BAKE GERMAN COFFEE CAKE.

So many housekeepers have accepted the bakers' goods as the standard of excellence that they lose sight of the fact how much better and cheaper the really good home-made article is. Especially for a family with several adults or growing children, it will pay the cook to bake once or twice a week and offer her family fine her for contempt of court." the best that can be produced for the money expended.

(When baking with compressed yeast it is well to immerse it in a cup of cold water over night, or at least long enough to dissolve. This eliminates the strong odor without impair- French! ing its strength, as the yeast germ lies dormant while under water. When ready to use pour off the water: the yeast will have settled in bottom of cup. Now add a spoonful of sugar. This at once awakens the process of fermentation and when yeast is added Star.

to the warm liquid you have a rel able, sweet raising power, which if treated right will never fail you. All ingredients must be luke warm and dough kept in a warm place while raising. All measurements are level. Use a graded half-pint measuring cup, and sift flour before measuring. De not pack flour into cup, just slide in lightly and level off.)

GERMAN CINNAMON CAKE.

Ingredients for Sponge.

Three cupfuls of sifted bread flour. Two cupfuls of warm milk and wa er (three-fourths milk). One teaspoonful of salt.

Two cakes of compressed yeast. One tablespoonful of sugar. Method.

Prepare yeast and set sponge a directed for almond cake Ingredients for Second Mixing. One-half cupful of lard and butter Two-thirds cupful of sugar.

Two eggs. Three cupfuls of sifted flour.

gether until well creamed, beat into sponge, then beat in the flour little by little. When all is in, stir hard with a big perforated spoon, cover and let raise to double its bulk. Have flat tins well greased. When dough is light, dip a spoon in water, then take Let this stand about one-half hou then dip a thin covering of melted butter over, strew liberally with sugar and sift a little cinnamon of that, and make as any other coffee cake. For small quantity use only

How Sunday Reaches the Frontier. High principle and humor have ever made an irresistible combination. Early merchants on the American frontier conspicuously failed in the observance of Sunday; therefore, when a young New Jersey trader, who had settled in Louisville, Kentucky, closed his store on the first Sunday after it was opened, there was much ado in the town.

Other establishments kept open: had he not noticed it? he was asked. Yes, he knew it. Why did he close? He was the first to do so; he must know that, also.

"Why," said a facetious merchant, "Sunday hasn't yet crossed the moun-

"Yes, it has," declared the newcomer, pleasantly. "I brought it with me!" That simple and ready reply proved more effective than any amount of argument, and although he was the first to observe the day in town, he soon had many followers in Sunday-closing. -Youth's Companion.

STOMACH MISERY GAS. INDIGESTION

"Pape's Diapepsin" fixes sick, sour, gassy stomachs in five minutes.

Time it! In five minutes all stomach distress will go. No indigestion, heartburn, sourness or belching of gas, acid, or eructations of undigested food, no dizziness, bloating, or foul breath. Pape's Diapepsin is noted for its

It is the surest, quickest and most certain indigestion remedy in the whole world, and besides it is harmless. Please for your sake, get a large fifty-cent case of Pape's Diapepsin from any store and put your stomach right. Don't keep on being miserable -life is too short-you are not here

long, so make your stay agreeable.

Eat what you like and digest it; en-

joy it, without dread of rebellion in the stomach. Pape's Diapepsin belongs in your home anyway. Should one of the family eat something which don't agree with them, or in case of an attack of indigestion, dyspepsia, gastritis or stomach derangement at daytime or during the night, it is handy to give the quickest relief known. Adv.

Clerical Humor. When Rev. Doctor Snow rose to address his evening congregation his

voice was slightly husky "My friends," he said, "I have already preached one sermon and made two long speeches to societies in different parts of the city, and before I have finished this evening you will think I am a wheel-the longer the spoke, the bigger the tire.'

Only a few appeared to see the point, however, and the good doctor scorned to furnish a diagram.-Chicaso Tribune.

SCHOOL NOTES

We notice the absence of several pupils, on account of sickness. But we are glad to see them coming back to school.

A drum drill was started in school sometime last week, which will enable us, in time, to keep perfect step while marching.

We are progressing nicely in our studies now, and expect to finish some of our books by Christmas. We have begun working on our exhibits for Thanksgiving Day.

Saturday night a play will be given at the school auditorium. There will be charges for admission, and the proceeds will be added to the funds for the windmill. Everyone invited.

The Sterling girls played San Angelo another game of basket ball-Well, as Mr. Roberts said, "we have met the enemy and we are theirs." Still, we are proud of our girls. Even if they did not win, they cannot be surpassed in their manners and ladylike behavior.

Friday night, there will be a "Get acquainted' party at the school auditorium. The idea is that as many grown-up people as possible meet THE STATE OF TEXAS together with the faculty of our school and get acquainted, besides having an all-round good time. A short program will be rendered and refreshments served. All invited.

One new pupil has been enrolled. during the week, in each the Third and Fourth grades. The Fourth grade being especially favored by having the honor of enrolling, as one of their number, the son of our former friend, the late Dr. M. Bowden. We especially commend this boy to the care of our pupils, as the many acts of mercy and kindness of his of ground, 9 inches wide, off the Ry, Co., situated in Sterling on father are still fresh in the minds of

GREATEST HORSE SHOW.

More Than \$8,000 in Prizes Are Offered in Classes at Fort Worth Show.

Embracing a total list of more than \$8,000 in prizes and offering pecial attractions that are expected draw the most representative exibitors of Missouri and Kentucky, he National Feeders and Breeders' show has announced its official prize will be held five nights during the big fall event, November 22 to 29. The most magnificent offer that

as ever been made in saddle horse vents in any of the recognized Horse Shows of America is being made in the "Horse Show Classics." This event is for five-gaited saddle horses and already the very flower of the best animals of the land are being entered. A prize of \$1,000 is eing hung up in this division. The lassic will last only fifteen minutes and is expected to be the most brilliant spectable of the kind ever witnessed in a Horse Show in the Southwest.

But this is only one of the many attractions of the great Horse Show, which will be more comprehensive and beautiful than ever before, Greater prizes will be offered in the classes for roadsters, harness horses, both single and pairs, tandems, hunters and jumpers, ladies' classes and many other divisions. With the coming of the best stables of Kentucky and Missouri, not only saddle horse excellence, but the best in harness horses will be seen. Practically all of the veteran exhibitors have already entered, but stables that have seldom been seen this side of the Mis-

The hunters and jumpers' classes will be more elaborate than ever before, and several military posts are expected to send teams. These will struggle heroically for the honors. Push ball, polo and a number of other thrilling features of a like nature are expected to characterize the Horse Shows.

Some of the very best judges in the country will officiate in the Horse Show, men who have tied the ribbons in many others of the best shows of the land.

Texas exhibitors are making their entries rapidly, confident that inarensed classes of competition will not prevent them from securing their share of the awards.

HIS CATCH.

A man with a fishing pole sat on the river bank near the Atchison waterworks intake. "How many have you caught?" some one asked him. "When I get another I'll have one." he replied.

"So you are going to call on the other end of the family to strengthen their nerve."

"Yes, so to speak, a weak end

CLOSE TO BURIAL ALIVE.

A remarkable case of a woman coming back to life after being certified as dead has occurred at Tonbridge, Kent, England. The woman suffered from consumption and apparently died from that complaint. She was placed in a coffin and the funeral was arranged to take place two days later. Just before the service was to have been read, however, her brother was in the next room in attendance on his mother, when he heard a noiise in the adjoining apartment, and on entering was startled to find his sister sitting upright in her coffin. She died the following day, having survived the terrible experience two days.

BURNING THE SLASH"TO PREVENT FIRES

It is hard for the average layman to realize how fires can assume such magnitude in territory supposed to be under supervision of men appointed for the particular purpose of preventing fires, but the fact is quite readily comprehended by those who have had occasion to travel through some of the remote and inaccessible regions within

MAKING A TRENCH FROM WHICH TO MIGHT FOREST FIRE

OREST fires! There is something

awe-inspiring and terrible in the very hought of them. You may never

have traveled hours, on a railway

u may never have seen the light

a blazing forest. Yet, though you

ve not come as near as this to a

rest fire, the words carry a feeling

danger and of tremendous might

the national forests. As a matter of fact, the lands withdrawn as national forests are almost entirely of a rugged, mountain ous nature. Necessarily, there are large and comparatively ularly in the range country, bu instances point to the fact that the sections subject to the most severe fires are invariably those of the most rugged and inaccessible nature, made up o with a dense forest and heavy underbrush. Many places are in their present condition, prac-

tically impenetrable; and while

they are being opened up as rapidly as funds will permit of trails being built, yet there is so much area, so many other duties are required of the forest officers and the funds mentioned are so limited and inadequate, that progress of such work, while keeping pace with the available resources, is necessarily slow.

Before enlarging upon conditions under which large fires begin, it might be well to mention briefly a few of the forest fire terms with which the layman frequently meets and may not un-

Forest fires are classified generally as crown or top fires-those where the fire travels through the tops of the trees with surprising rapidity and working disastrous results; and ground or surface fires, where the fire travels along the ground, consuming soil covers or humus, brush and litter, seedlings and often small trees, and, consequently, doing little or no damage to mature timber. Luckily, in most cases forest fires are ground fires and it is these that are the most quickly controlled. Yet a single top fire can cause vastly more damage than a great number of ground fires. However, it is generalunder unusual conditions that crown or top fires occur-such as high winds, very bushy or steep country and severe drought, when such conditions can in an incredibly short time change a creeping ground fire into a sweeping crown fire, leaving a path of ruln and often death in its wake. In brief, drought and wind are the two dominant conditions favorable to severe fires. The wind is always the most dreaded factor during the fire season, its freakishness and uncertainty upsetting the best of plans. So flerce was the wind at the time of the destructive fires of 1910 that whole hillsides of timber were uprooted and men were forced out of their saddles. The fire leaped across rivers half a mile wide at a single bound, traveling nearly a mile a minute at times and devouring everything in its path. Often wide canyons were spanned as by a great jump, the fire continuing on the opposite side and leaving the canyon timber green and unharmed. Numerous instances of the absolute freakishness of the fire could be cited. and all tend to show its very uncertainty. In fighting a fire there is constructed around

the burning area what is called a fire line or trench. This consists of clearing away all debris and brush, generally for three or four feet, though wider when conditions allow or warrant it, and exposing the mineral soil for one or two feet or wider as necessary. An ordinary ground fire, unfanned by a strong wind, will die out on reaching the strip of mineral soil, often as effectually as if the line were a stream of water. When the fire is moving slowly and men can stand the heat and smoke, it is always desirable to build the trench close to the fire so as to prevent its gaining momentum as it progresses; but where the fire is traveling quite rapidly. often the fire line has to be placed some distance away from the fire, and where adequate patrol or supervision is assured the burned material on the inside of the line is fired in order to meet the advancing fire and destroy the inflammable material in its path. Backfiring, as this is called, is generally used only in an emergency and by experienced hands. Often, of course, where the fire is severe, strips of timber for variable distances are cleared, but in the ordinary ground fire such work is usually too slow and unnecessary.

THE REFORESTATION IS DONE IN BUTENED DISTRICTS

grub hoes, the hoes being usually in greatest proportion and most effective. Often one or two crosscut saws are useful, particularly where the fire is traveling through a lot of down timber. The axmen generally go first, clearing out and cutting away the heavy stuff along the line; then follow the grub hoe or mattock men, breaking through the heavy sod and roots: and last the shovel men, who clean out the trail, or, as might be stated but the finishing touches on the work of the others. The amount of work a gang of men can do depends upon various circumstances, such as the nature of the country, tools available, etc., but roughly it might be said that a gang of twenty men can build a mile of line a

Aside from a few general principles there are no set rules for fighting forest fires in fact, it is far from a black-and-white proposition. Rather, it calls into play initiative and headwork, and the result attained bears mute evidence of the success or failure of the supervising officer, although always it must be remembered that that uncertain and uncontrollable factor, the wind, can snatch victory from the hands of man so quickly and easily as to make it seem some times a veritable mockery of his efforts. And, too, the unbelievable action of fire, even when apparently under control, makes it absolutely necessary that it be watched closely and continuously until there is not a single remaining vestige of its existence.

Among the principal causes of forest fires are locomotive sparks, lightning, camp fires left unextinguished, burning of slash in clearing land, logging operations-principally from fire in the resultant slash accumulated by the average logger in cutting over an area. There are minor other ways, such as incendiarism, ashes from a pipe, a lighted cigar or cigarette stub or lighted match cast thoughtlessly aside. The first three mentioned, however, are the most general.

When a fire has once assumed the proportions of a large top fire, it is generally inadvisable to attempt to check it; rather, it is good judgment to consider the safety of the fire fighters themselves, so that they may be in readiness to attack the fire when it again leaves the tops of the trees and assumes its slower progress along

It might be mentioned right here that forest fires, with particular reference to ground fires, do not always destroy standing timber, but often only the very small trees, brush and surface cover or humus. Potential timber, of course, has a distinct value, and the destruction of a good soil cover is a decided detriment to the forest. but many trees, such as Douglas fir, tamarack and yellow pine, have a thick, heavy bark which forms a good resistance to fire and will often withstand periodic ground fires for years. Other trees with thin bark, of course, succumb quite

In the report of the secretary of agriculture embodied in the Yearbook of the department of agriculture for 1911, he states that "the fires of the calendar year 1910 covered more than 3,000,-

such devastation.

vate timberland within the na-

tional forest boundaries, and

inflicted damage to national

city and admires the fearless and systematic to some of us to find that the kingdom like the village?" work of the firemen fighting to subdue the means work and wages, labor and reflames. Here they are but minutes away from ward, industry and faithfulness. If we the time they were here."—St. Louis the source of the fire, with speedy conveyances learn that lesson from the parable we Republic. for reaching it and every possible assistance of have learnt a great deal. It is the goshuman ingenuity to control the fire

Compare this with the many obstacles with is no gospel of work, that it is a stern which the forest fire-fighter has to contend. Sometimes he is more than a day's journey from continually striving to escape. No, it the fire. He has a limited and often inexperi- is a gospel. God has made work a "out my way it has already just about enced crew to help him. He must travel on for or on horseback, and he cannot lope along as they do in the city parks-mountain trails are hardest to save. not made for loping horses. He must rely on packhorses for conveying commissary supplies. because it may mean many days of hard work ahead of him on the burning area. Very often, indeed, he must blaze his way a number of miles through a trailless wilderness, carrying his bed and grub on his back, and through a country where every step seems a greater impediment to rapid progress; and when he reaches the fire it may be of such proportions as to appall a less

The rapidity with which fire can spread in the mountains is almost unbelievable. For instance, in 1910, by the middle of August over 3,000 small fires had been put out by patrolmen and over 90 large ones had been brought under control by crews of from 25 to 150 men. And yet, when the cyclone of August 20 came, that work was all undone so quickly as to make one gasp with wonder and awe. Within 48 hours a strip of country more than 100 miles long and more than 25 miles wide had been burned over. And still the fire was advancing. Against all this an army of more than 3,000 men fought persistently and courageously and always in the face of overwhelming odds, yet never did they falter until

In passing, it is but fitting to give credit to the brave men in the government's employ, who risked and lost their lives in earnest endeavors to carry out their duties, and many are the tales of heroism and unselfish devotion during those strenuous times, when men toiled and sweated shoulder to shoulder.

Men can and will, in the course of time make effort to reforest the great devastated areas, but the scope of years to carry out such work is broad indeed. Man's best work, now and for always, lies in the prevention of a recurrence of such calamities as have gone before. Through legislation man can compel the railroads to use contrivances to prevent sparks from leaving the engines; he can educate campers into the necessity for their co-operation in extinguishing camp fires (a truly little thing, yet big in results) and exact a severe penalty for failure to abide by the law; he can appropriate more money for improvement and protection work, to place the for ests under closer supervision and make them more accessible, so that the fires caused by lightning, for instance, can be caught at their very inception; but mostly, he must enlist the cooperation of all his fellowmen to help in the great work of preserving and perpetuating the one another, but we know something orests because they represent a source of wealth about one another. and necessity and beauty, not to any single individual, but one in which every member of our great country is, and always will be, directly or indirectly, a participant, even unto our children's children, ad infinitum.

"How much to send this telegram?"

"Twenty-five cents, please," replied the telegraph operator. "But you can repeat the word ten times if you like

without extra cost." "No, thank you! It's the answer to "Venetia," and wrote poetry for into his "War and Peace," goes to ment of him. We want to argue with too eager, don't you think?"

Parable of the Savior Cannot Die Out From the Minds of Men.

"For the kingdom of heaven is like anto a man that is an householder, which went out early in the morning to hire laborers into his vineyard," etc .- Matt. 20:1-15.

In those likenesses together and you find addition to this, there was an that the kingdom touches your life added toll of 74 human lives and work, no matter what your occuost in fighting the fires and a pation may be. Why, it seems like an large number injured, to say invitation from God to join his forces harmless; children love it, and it nevnothing of many ranchers, set- when you find that his kingdom is in tlers, prospectors, etc., who per- the midst of your life, and so it is. The Altogether, it certainly kingdom of heaven is like a man who puts the fire season of 1910 goes to hire laborers! That very first down as one of the country's sentence overthrows some of our pregreat catastrophes, to be listed conceptions. We probably had an idea with the great Hinckly fire in that the kingdom of heaven was like Minnesota in 1894, which did the Garden of Eden where there would be no labor to speak of, and where the One watches quite breathless old question of wages would never be is a serious conflagration in a brought up. It may be rather startling visiting here yesterday—how did they pel of work. Some one says that there law of necessity from which man is farthest from the kingdom, and the

Jesus represents God as hiring laborers for his vineyard. To the Christian every honest calling is a sacred calling since it is an integral part of the necessary work of the kingdom of God. We often hear the ministry dodge mine.—Springfield Union. spoken of as the sacred calling, but that deserves the title only when it is striving to infuse sacredness into every life, and into the so-called secu-

lar calling of every life. The world is filled with different kinds of work. There is for example the work of the homemaker, concerned with the preparation of food the caring for house and clothing, and all those innumerable activities which Solomon loved to linger upon when he Tirpitz. On the dock was a dense described the good fortune of that home whose presiding angel is a good woman. Is not that work of the kingdom of God? And perhaps that class the hail was meant for him until the has more reason to go on a strike than admiral, smiling broadly, said: "Your those who work in our mines and factories. There is the necessary work of all those who labor in wood, and iron, and stone; of those who transform the ores into tools and machinery; of those who transform the raw materials into textures of cotton and wool and silk. There is the work of those who open the furrow, and sow the seed and reap the harvest. Can need of you? Are they not all necessary factors in God's wise economy?

If we do not teach the masses of men how to enter the strait gate, and evenings to fit themselves for greater where to find the narrow ribbon of a things. But it requires a good constipath that leads to life everlasting, we tution generally to do this. are but as "tinkling cymbals," and blind leaders of the blind.—Zion's with ease after he had learned the Herald.

The Understood

The understood is but a small domain of our knowing, and the apprehended is greater than the comprehended. Is it said that we do not know God? True, we do not know all about him, but we know something about him. And we do not know all about

The understanding is the vestibule of the mind! Uncover thy head and enter the temple of the soul! Behold the power, the beauty and the love! If we had nothing but understanding how little should we know or think or feel!-Horatio Stebbins.

Good Life Own Demonstrator.

As health is the best demonstrator of the laws that make health, so the good life is demonstration enough of this time, if it had not been for Grapeits own validity. Try it for yourselves. God seems to say to men. Once it seemed far off and impossible; but the new day of the kingdom of God is here, when any little child can try for himself and know at first hand the certainty of what we believe .-Charles F. Dole.

You Look Prematurely

MAKING A TRENCH FROM WHICH TO FIGHT FOREST FIRE OREST fires! There is something awe-inspiring and terrible in the very hought of them. You may never

have traveled hours, on a railway rain, through the choking smoke. ou may never have seen the light a blazing forest. Yet, though you ve not come as near as this to a rest fire, the words carry a feeling danger and of tremendous might It is hard for the average layman to

realize how fires can assume such magnitude in territory supposed to be under supervision of men apfires, but the fact is quite readily comprehended by those who have had occasion to travel through some of the remote and inaccessible regions within

ter of fact, the lands withdrawn as national forests are almost entirely of a rugged, mountainous nature. Necessarily, there are large and comparatively pen portions included, particularly in the range country, but instances point to the fact that the sections subject to the most severe fires are invariably inaccessible nature, made up of high, steep mountains, covered with a dense forest and heavy underbrush. Many places are, in their present condition, practically impenetrable; and while

they are being opened up as rapidly as funds much area, so many other duties are required are so limited and inadequate, that progress of such work, while keeping pace with the available resources is necessarily slow.

Before enlarging upon conditions under which large fires begin, it might be well to mention briefly a few of the forest fire terms with which the layman frequently meets and may not un-

Forest fires are classified generally as crown or top fires-those where the fire travels through the tops of the trees with surprising rapidity and working disastrous results; and ground or surface fires, where the fire travels along the ground, consuming soil covers or humus, brush and litter, seedlings and often small trees, and, onsequently, doing little or no damage to mature timber. Luckily, in most cases forest fires are ground fires and it is these that are the most quickly controlled. Yet a single top fire can cause vastly more damage than a great number of ground fires. However, it is generally under unusual conditions that crown or top fires occur-such as high winds, very bushy or steep country and severe drought, when such conditions can in an incredibly short time change a creeping ground fire into a sweeping crown fire, leaving a path of ruin and often death in its wake. In brief, drought and wind are the two dominant conditions favorable to severe fires. The wind is always the most dreaded factor during the fire season, its freakishness and uncertainty upsetting the best of plans. So flerce was the wind at the time of the destructive fires of 1910 that whole hillsides of timber were up rooted and men were forced out of their saddles. The fire leaped across rivers half a mile wide at a single bound, traveling nearly a mile a min ute at times and devouring everything in its path. Often wide canyons were spanned as by a great jump, the fire continuing on the opposite side and leaving the canyon timber green and unharmed. Numerous instances of the absolute freakishness of the fire could be cited, and all tend to show its very uncertainty.

In fighting a fire there is constructed around the burning area what is called a fire line or trench. This consists of clearing away all debris and brush, generally for three or four feet, though wider when conditions allow or warrant it, and exposing the mineral soil for one or two feet or wider as necessary. An ordinary ground fire, unfanned by a strong wind, will die out or reaching the strip of mineral soil, often as effectually as if the line were a stream of water. When the fire is moving slowly and men can stand the heat and smoke, it is always desirable to build the trench close to the fire so as to prevent its gaining momentum as it progresses; but where the fire is traveling quite rapidly often the fire line has to be placed some distance away from the fire, and where adequate patrol or supervision is assured the burned material on the inside of the line is fired in order to meet the advancing fire and destroy the in flammable material in its path. Backfiring, as this is called, is generally used only in an emergency and by experienced hands. Often, of course, where the fire is severe, strips of timber for variable distances are cleared, but in the ordinary ground fire such work is usually too slow and unnecessary.

The best tools used by a fire-fighting crew in the mountains are axes, shovels and mattocks or grub hoes, the hoes being usually in greatest proportion and most effective. Often one or two crosscut saws are useful, particularly where the fire is traveling through a lot of down timber. The axmen generally go first, clearing out and cutting away the heavy stuff along the line; then follow the grub hoe or mattock men, breaking through the heavy sod and roots; and last the shovel men, who clean out the trail, or, as might be stated, put the finishing touches on the work of the others. The amount of work a gang of men can do depends upon various circumstances, such as the nature of the country, tools available, etc., but roughly it might be said that a gang of twenty men can build a mile of line a

Aside from a few general principles there are no set rules for fighting forest fires-in fact, it is far from a black-and-white proposition. Rather, it calls into play initiative and headwork and the result attained bears mute evidence of the success or failure of the supervising officer, although always it must be remembered that that uncertain and uncontrollable factor, the wind, can snatch victory from the hands of man so quickly and easily as to make it seem some times a veritable mockery of his efforts. And, too, the unbelievable action of fire, even when apparently under control, makes it absolutely necessary that it be watched closely and continuously until there is not a single remaining vestige of its existence.

Among the principal causes of forest fires are locomotive sparks, lightning, camp fires left unextinguished, burning of slash in clearing land, logging operations-principally from fire in the resultant slash accumulated by the average logger in cutting over an area. There are minor other ways, such as incendiarism, ashes from a pipe, a lighted cigar or cigarette stub or lighted match cast thoughtlessly aside. The first three mentioned, however, are the most general.

When a fire has once assumed the proportions of a large top fire, it is generally inadvisable to attempt to check it; rather, it is good judgment to consider the safety of the fire fighters themselves, so that they may be in readiness to attack the fire when it again leaves the tops of the trees and assumes its slower progress along

It might be mentioned right here that forest fires, with particular reference to ground fires, do not always destroy standing timber, but often only the very small trees, brush and surface cover or humus. Potential timber, of course, has a distinct value, and the destruction of a good soil cover is a decided detriment to the forest, but many trees, such as Douglas fir, tamarack and yellow pine, have a thick, heavy bark which forms a good resistance to fire and will often withstand periodic ground fires for years. Other trees with thin bark, of course, succumb quite

In the report of the secretary of agriculture. embodied in the Yearbook of the department of agriculture for 1911, he states that "the fires of the calendar year 1910 covered more than 3,000,-

Parable of the Savior Cannot Die Out From the Minds of Men.

"For the kingdom of heaven is like anto a man that is an householder, which went out early in the morning to hire laborers into his vineyard," etc.-Matt. 20:1-15

The occasion of this parable we find in the previous chapter where the rich man came to Christ, the young man who had a desire for spiritual things, but who thought more of his material possessions and at last went away sorrowful. The disciples, and especially Peter, had been pondering the incident. The young man had refused the service of Christ and clung to his riches; they on the contrary had forsaken what little they possessed and thrown in their lot with the Master What would be their reward? So at last Peter asks the question, "Behold and passers by were excessively rare, about it." we have forsaken all and followed the guest asked the farmer why he Thee, what shall we have therefore?" The answer of Christ is that all those who have made sacrifices for his sake shall receive in the present world an and we have made up our minds to hundredfold and, in addition, life ever-

But the spirit of Peter's question also requires an answer. It was the Christian Endeavor World. spirit of self-consciousness, of selfcomplacency and bargaining. So Jesus tells him that many that are last shall be first, and the first last, meaning that not the mere fact of having made sacrifice for the kingdom insures the great reward, but the spirit in which the sacrifice is made, and then Jesus tells the parable.

This parable deals with work and wages. The social science of today probably does not take into consideration what this parable has to say, or possibly looks upon it as foolishness, and yet its teaching will stand when and nothing else cleanses the tender much of the so-called social science and fine-spun theories of the age have passed into the limbo of forgotten

000 acres of government timber-

land and 800.000 acres of pri-

vate timberland within the na-

tional forest boundaries, and

such devastation.

for reaching it and every possible assistance of

or on horseback, and he cannot lope along as

not made for loping horses. He must rely on

packhorses for conveying commissary supplies,

because it may mean many days of hard work

ahead of him on the burning area. Very often,

indeed, he must blaze his way a number of miles

through a trailless wilderness, carrying his bed

and grub on his back, and through a country

it may be of such proportions as to appall a less

The rapidity with which fire can spread in the

mountains is almost unbelievable. For instance,

in 1910, by the middle of August over 3,000

small fires had been put out by patrolmen and

over 90 large ones had been brought under con-

trol by crews of from 25 to 150 men. And yet,

when the cyclone of August 20 came, that work

was all undone so quickly as to make one gasp with wonder and awe. Within 48 hours a strip

of country more than 100 miles long and more

than 25 miles wide had been burned over. And

still the fire was advancing. Against all this an

army of more than 3,000 men fought persistently

and courageously and always in the face of over-

whelming odds, yet never did they falter until

In passing, it is but fitting to give credit to the

brave men in the government's employ, who

risked and lost their lives in earnest endeavors

to carry out their duties, and many are the tales

of heroism and unselfish devotion during those

strenuous times, when men toiled and sweated

Men can and will, in the course of time, make

effort to reforest the great devastated areas, but

the scope of years to carry out such work is

broad indeed. Man's best work, now and for al-

ways, lies in the prevention of a recurrence of

such calamities as have gone before. Through

legislation man can compel the railroads to use

contrivances to prevent sparks from leaving the

engines; he can educate campers into the necessity for their co-operation in extinguishing camp

fires (a truly little thing, yet big in results) and

exact a severe penalty for failure to abide by the

law; he can appropriate more money for im-

provement and protection work, to place the for-

ests under closer supervision and make them

more accessible, so that the fires caused by light-

ning, for instance, can be caught at their very

and necessity and beauty, not to any single indi-

great country is, and always will be, directly or

indirectly, a participant, even unto our children's

sturdy nature.

human ingenuity to control the fire.

things "The kingdom of heaven is like unto waste, liver gets sluggish, stomach forest timber, including young a man who goes to hire laborers into sours, then your little one becomes growth, estimated at a little his vineyard." Let us pause right less than \$25,000,000. The loss there. It is a fine thing when you feel in timber destroyed or damaged discouraged at conditions, and feel as was slightly over 6,500,000,000 if in this work-a-day world the king feet . . . In fighting the fires. dom of God were an etheral and unspecial expenditures were in- real quantity-it is a fine thing then to curred totaling over \$1,000,000, recall how many things Jesus says the besides the cost in time of the kingdom of heaven is like. Gather regular protective force." In those likenesses together and you find addition to this, there was an that the kingdom touches your life added toll of 74 human lives and work, no matter what your occulost in fighting the fires and a pation may be. Why, it seems like an Syrug of Figs" because it is perfectly large number injured, to say invitation from God to join his forces nothing of many ranchers, set- when you find that his kingdom is in tlers, prospectors, etc., who per- the midst of your life, and so it is. The Altogether, it certainly kingdom of heaven is like a man who puts the fire season of 1910 goes to hire laborers! That very first down as one of the country's sentence overthrows some of our pregreat catastrophes, to be listed conceptions. We probably had an idea with the great Hinckly fire in that the kingdom of heaven was like Minnesota in 1894, which did the Garden of Eden where there would be no labor to speak of, and where the One watches quite breathless old question of wages would never be y a serious conflagration in a brought up. It may be rather startling city and admires the fearless and systematic to some of us to find that the kingdom like the village?" work of the firemen fighting to subdue the means work and wages, labor and reflames. Here they are but minutes away from ward, industry and faithfulness. If we the source of the fire, with speedy conveyances learn that lesson from the parable we Republic. have learnt a great deal. It is the g pel of work. Some one says that there Compare this with the many obstacles with is no gospel of work, that it is a stern which the forest fire-fighter has to contend. law of necessity from which man is Sometimes he is more than a day's journey from continually striving to escape. No. it the fire. He has a limited and often inexperi- is a gospel. God has made work a enced crew to help him. He must travel on fo a means of grace. The idle man is the farthest from the kingdom, and the

they do in the city parks-mountain trails are hardest to save. Jesus represents God as hiring la borers for his vineyard. To the Christian every honest calling is a sacred calling since it is an integral part of the necessary work of the kingdom of God. We often hear the ministry spoken of as the sacred calling but where every step seems a greater impediment that deserves the title only when it is to rapid progress; and when he reaches the fire striving to infuse sacredness into every life, and into the so-called secular calling of every life.

> The world is filled with different kinds of work. There is for example the work of the homemaker, concerned with the preparation of food, the caring for house and clothing, and all those innumerable activities which Solomon loved to linger upon when he described the good fortune of that home whose presiding angel is a good woman. Is not that work of the kingdom of God? And perhaps that class has more reason to go on a strike than those who work in our mines and factories. There is the necessary work of all those who labor in wood, and iron, and stone; of those who transform the ores into tools and machinery; of those who transform the raw materials into textures of cotton and wool and silk. There is the work of those who open the furrow, and sow the seed and reap the harvest. Can we say to any of these, we have no need of you? Are they not all necessary factors in God's wise economy?

If we do not teach the masses of men how to enter the strait gate, and evenings to fit themselves for greater where to find the narrow ribbon of a path that leads to life everlasting, we are but as "tinkling cymbals," and blind leaders of the blind.—Zion's with ease after he had learned the

The Understood. The understood is but a small domain of our knowing, and the apprehended is greater than the comprehended. is it said that we do not know God? True, we do not know all about inception; but mostly, he must enlist the co him, but we know something about operation of all his fellowmen to help in the him. And we do not know all about great work of preserving and perpetuating the one another, but we know something forests because they represent a source of wealth about one another.

The understanding is the vestibule vidual, but one in which every member of our of the mind! Uncover thy head and enter the temple of the soul! Behold the power, the beauty and the love! If we had nothing but understanding how little should we know or think or feel!-Horatio Stebbins.

> Good Life Own Demonstrator. As health is the best demonstrator

good life is demonstration enough of ts own validity. Try it for yourselves. God seems to say to men. Once it seemed far off and impossible; but the new day of the kingdom of God is here, when any little child can try for himself and know at first hand the certainty of what we believe .-Charles F. Dole.

New World Democracy. The story that the kaiser loves most to tell his intimates, declares Mr. William Armstrong in the Woman's

Magazine, concerns the visit of his brother, Prince Henry of Prussia, to America The incident happened just as the prince was landing at New York. Beside him on deck stood Admiral von

Tirpitz. On the dock was a dense crowd. From its midst a stentorian voice called, "Henry! Henry." The prince did not understand that the hail was meant for him until the

admiral, smiling broadly, said: "Your royal highness, I think some one wants to speak to you."

Then Prince Henry looked over toward the human megaphone, who still continued to bawl out his name. Seeing that he had caught the royal gaze, the owner of the voice shouted: "How's Bill?"-Youth's Companion.

WORKS ALL DAY And Studies at Night on Grape-Nuts Food.

Some of the world's great men have worked during the day and studied things. But it requires a good constitution generally to do this. A Ga. man was able to keep it up

sustaining power of Grape-Nuts, although he had failed in health before he changed his food supply. He says: "Three years ago I had a severe attack of stomach trouble which left me

unable to eat anything but bread and water. "The nervous strain at my office from 6 A. M. to 6 P. M. and improper foods caused my health to fail rapidly. Cereal and so-called "Foods" tried without benefit until I saw Grape-

Nuts mentioned in the paper. "In hopeless desperation I tried this food and at once gained strength, flesh and appetite. I am now able to work all day at the office and study at night, without the nervous exhaustion that was usual before I tried Grape-Nuts. "It leaves me strengthened, re freshed, satisfied; nerves quieted and toned up, body and brain waste restored. I would have been a living skeleton, or more likely a dead one by this time, if it had not been for Grape

Nuts." Name given by Postum Co., Battle Creek, Mich. Read "The Road to Wellville," in pkgs. "There's a Reason."

ture five baby wild turkey chicksthey were only two days old when he caught them. They were given to a tame turkey hen-who already had a brood of

young ones-after they had been in captivity only two days. At first these shy little fellows

seemed to distrust everything, but soon became accustomed to the Virginian, who paid particular attention to his mixed flock, bringing them berries and other delicacies, at the same time teaching them to come to his call to be fed.

Every one of the five birds grew up and they turned out to be one gobbler and four hens. It is interesting to note that although there was a mortality of 60 per cent. among the domestic birds that season, the five wild turkeys were not affected in any way.

At the approach of winter a wire enclosure was made, this was also covered over with wire, making a perfectly enclosed space of 150x45 feet, and at one end was a small tree that was enclosed in a 25-foot square of wire fencing-a natural roosting place—the enclosed space had a growth of bushes and wild vines growing upon it, also a natural sod.

The turkeys put in this limited space must naturally be fed on such stuff as would as nearly as possible. resemble the food that nature intended for them, so they were given corn, wheat, oats, wild berries, acorns, persimmons, grit in abundance, and fresh water ad libitum.

The winter season passed, the birds were well and hearty. With the adwent of spring, the hens made their nests in the enclosure, where honeysuckle vines afforded the privacy that they so longed for. Later on the their away from the wild hens that had turkey with the wild Mexican bird. some Bronze hens, who raised 38 birds out of a hatch of 40.

mill carries sails that he had used with the original canvas which can be spread to five, and the loss of only two birds

It is interesting to note that after the young birds and their mothers had been given their freedom, they showed no disposition to revert to their wild state, but always returned home at night, roosting on the upper supplying motive power, through the other turkeys, the young birds taking more kindly to domestic ways than

After two years of hard work the 38 birds above mentioned, were sold But Greek peasant activities are by at a price aggregating slightly more rielding superb fruit scarcely inferior received from gobblers was from \$12 and a five-dollar bill was hardly ade- fifths of the young turkeys before apiece. countries turkeys are driven to me ket in flocks, and we once saw a for of nearly 300 birds being driven alor the highway to the railroad station three miles from the farm, where the were to be cooped and shipped to the city market.

The best-known varieties in Anes ca are the Bronze, Naragansett, But and Black. The Boubon Red is a fine bird, coming originally from the moustains of Kentucky, where it flourished in a wild state for many years. The black turkey of America came from England, where it is known as the

Norfolk The bronze turkey, which is probe bly the most popular country, was originated in England

through the crossing of an America wild bird upon the black turkey. The North American wild turke was at one time very plentifully di tributed over the entire country from the Carofinas to Canada, and mos They were migratory, following the od supply, often wandering distant

plentiful to the sections sub-d as Pennsylvania, Ohio and Kentucky from 200 to 300 miles in search their favorite food, following the crop nto the localities where the sea afforded the greatest production. These early wild turkeys visited to

barnyards of the early settlers of t over from the old countries, we kept, and the result was a great in provement in all qualities of this bird Breeders were quick to observe this improvement, and sought wild got blers to cross upon their domestic birds. It is from this cross that our highest standard turkeys have be bred. They have been so carefully selected, mated and cared for, by th fanciers, that there has been produce perhaps the most beautifully plumaged and noblest table bird in the world

Unfortunately, like the wild pigeon the wild turkey has almost disay peared from this country. A turket does not mature until it is about three years old, and to obtain strong and vigorous offspring, hens from two to three years old should be mated to strong, active males of the same ago or older. The males and females should never be taken from the same family, and no breeder should go into the business unless he is willing to

start with the standard bred stock The critical time in the lives of turkeys is in the first six weeks. The gins to show on their heads. The should never be turned out when the fined in a large yard, where they cal have plenty of exercise. When they are old enough to run out on the be brought in before every storm, and

Of course, if the birds are slaughter other, and when storms come on they pay for the labor involved.
