AN ATTACK OF GRIP USUALLY LEAVES KIDNEYS IN WEAKENED CONDITION

Doctors in all parts of the country have been kept busy with the epidemic of grip which has visited so many homes. The symptoms of grip this year are often very distressing and leave the system in a rundown condition, particularly the kidneys which seem to suffer most, as almost every victim complains of lame back and urinary troubles which should not be neglected, as these danger signals often lead to dangerous kidney troubles. Druggists report a large sale on Dr. Kilmer's Swamp-Root which so many people say soon heals and strengthens the kidneys after an attack of grip. Swamp-Root, being an herbal compound, has a gentle healing effect on the kidneys, which is almost immediately noticed in most cases by those who try it. Dr. Kilmer & Co., Binghamton, N. Y., offer to send a samsize bottle of Swamp-Root, on receipt of ten cents, to every sufferer who re-quests it. A trial will convince anyone who may be in need of it. Regular medium and large size bottles, for sale at all druggists. Be sure to mention this

Wiser Than She Knew.

From out of the mouths of babes comes wisdom. She had received a child's doughboard and rolling pin for Christmas. She was sitting on the floor playing. Among her playthings was a penny. She put the penny on the board and began rolling it.

"What are you doing, baby?" asked

"Why, papa, I am rolling some dough."-Indianapolis News,

Catarrhal Deafness Cannot Be Cured by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure Catarrhal Deafness, only one way to cure Catarrhal Deafness, and that is by a constitutional remedy. HALL'S CATARRH MEDICINE acts through the Blood on the Mucous Surfaces of the System. Catarrhal Deafness is caused by an Inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed. Deafness is the result. Unless the inflammation can be reduced and this tube restored to its normal condition, hearing may be destroyed forever. Many cases of Deafness are caused by Catarrh, which is an inflamed condition of the Mucous Surfaces.

ONE HUNDRED DOLLARS for any case of Catarrhal Deafness that cannot be cured by HALL'S CATARRH MEDICINE.

CONVERSION OF ROUGHAGE INTO MEAT

SPLENDID TYPE FOR HEAD OF SWINE HERD

edible meat; but to obtain the greatest efficiency, to make the most pork from a given amount of feed, to make the best pork, and to make that pork most economically the machine must be kept running to capacity from birth to the time of marketing. Nothing is more important than this factor. The uestion of breeding, the kind of feeds ed, and the proportion of the proein to the fattening elements in the ation are all important and are all greatest profit is to be returned to the feeder his pigs must make maximum gains at all times.

Supplement to Sow's Milk.

The first opportunity to force the igs comes when they are a few weeks dd. Up to this time they have been living solely on their dam's milk; in fact there is no successful substitute, as has been demonstrated by repeated failure to raise newly born pigs on cow's milk. The milk of the sow is much richer in protein, fat, and ash than is cow's milk, and the latter makes such a poor substitute that pigs under two weeks of age usually die of digestive troubles following its exclusive use. After growing for three weeks the young pigs begin to have an ppetite for some feed to supplement the sow's milk, and they should be fed, for unless they are the strain on the sow will be a very serious one. The pigs will eat from the sow's trough, especially if she is being fed on thin, sloppy feeds. A pen should be arranged adjoining that of the dam and separated from it by a partition with sufficient room at the bottom to allow the pigs to run under. In the inclosa low shallow trough to contain their

skim milk or mash. The best feeds for pigs of this age are dairy by-products, such as skim milk. These, mixed with mill feeds, as middlings, shorts, and even a cheap grade of flour, or with a meal of ground oats from which the hulls have been removed, give excellent satisfaction. Some feeders use the self-feeder at this time, placing it inside a creep that will admit the pigs to their grain at all times. This is best adapted for pigs after six weeks old, where there is a lack of skim milk and they must be prepared for the period following

weaning without this feed. Castration.

Pigs should be eastrated while they are young; the best time is between six and eight weeks of age, before veaning. At this age there is less shock to the pig and possibly less check n growth. If it is still suckling its dam, the chances are that it will be more thrifty and in better condition than when the operation is performed mmediately after weaning. A pig six, seven or eight weeks old is small enough to be handled conveniently, and the testicles are large enough to render the operation quite simple. For detailed information on this subject consult Farmers' Bulletin 780, "Castration of Young Pigs." Weaning.

Breeders differ widely as to the age for weaning. The majority wean at six to ten weeks, with a considerable number at twelve weeks; some wean later than twelve weeks and a few earno hurry about it; eight weeks is young enough if skim milk is available. Of course, the size and development of the pigs have a great deal to do with the weaning age. If skim milk is not obtainable, it is better to let them nurse the sow until ten weeks old. The weaning should be brought about directly, and in all cases be complete and decisive. The pigs should be placed apart from the sows in quarters secure enough to prevent communication. If the sow is still milking considerably, it is best to milk her dry by hand rather than to return the pigs to her. The pigs will be no better off and the sow infinitely worse than if weaning is brought about de-

Weaning Ration.

cisively.

Skim milk and corn or skim milk and shorts, fed in the proportion of three to one, make an excellent ration for weanings. If skim milk is not available, a mixture of five parts corn meal, four parts middlings and one part tankage fed as thin slop is very good. Good, succulent pasture is always in order. It will aid wonderfully often selected for homes, and rubbish in putting growth on the young pigs, is carried in for nests. The self-feeder was primarily devised to finish the hog at this | bread. time and serves its purpose in excellent fashion. Slightly more rapid and economical gains are made by its use than can be obtained by the best of hand feeding.

WASTE IN HOLDING HOGS IN LOCAL PENS

Practice of Purchasing Animals in Small Lots and Keeping in Yards Is Wasteful.

(Prepared by the United States Department of Agriculture.)

A loss of live weight of hogs and waste of feed result from the practice of purchasing local hogs in small lots and holding them in local stockyards until a carlord shipment is collected, according to specialists of the United States bureau of markets. They point out that at this and other seasons when runs are light, it often takes local buyers four or five days to assemble enough small lots for a carload. As facilities for feed and watering are inferior in small yards, the hogs make no further gains on their feed and often suffer actual loss of live weight. Local buyers, therefore, would do well to specify a certain day for the delivery of lots from the various farms and load and ship without holding. Formers also could club together to make up co-operative carload shipments on regular week days, thus saving the margin lost in individual small-lot sell-

PROTECT OUTLET OF DRAINS

Coarse Wire Screen Will Keep Small Animals From Entering and Establishing Homes.

What was formerly waste is At our left we have a view for miles district. It may be arranged in a now worked into saleable merchandise down the Hudson. Over at our right is number of ways to serve a variety of in the manufacturing industries. Farm the city of Albany, the upper portion purposes. The plan which is illus- buildings are farm factories. The soft of its \$27,000,000-dollar pile of marble trated here establishes it as a general produces the raw materials which are (the capitol) being plainly visible. barn for wintering beef cattle and to taken to the farm shops and made into stable several horses. It is 70 by 40 high-priced butter, beef, mutton and ern part of Albany and what we see feet in size on the ground with a big pork. storage mow overhead, the same size as the foundation including the stock the open range. It required three or ice houses, etc. It has been said that rented farms to the colonists, and were shed.

who raised Herefords and also kept a hustle for themselves all winter. The number of mares to raise colts. He grass was partly covered with snow

from \$100 up is a different proposition from the old buildings that were considered good enough to stable animals worth from \$50 down.

The high opening through the shed is the entrance to the barn. This arrangement gives a convenient threshing floor for oats when the crops are heavy and overflow the other barns. Hay settles considerably in a big mow like this before oat harvest and the space may be used to advantage in such emergencies. The oat straw is blown by the stacker back into the far end of the mow to be kept bright and clean for winter feed and bedding.

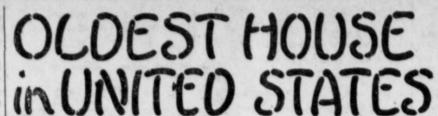

There is as much money in raising beef cattle as there is in keeping dairy cows. Profits depend upon the man. One farmer knows how to make money by doing a dairy business. Another farmer knows how to breed and feed beef cattle to get big prices. It is not often that one man makes a conspicuous success with both. He is prone to give his best attention to the kind of live stock that he likes best.

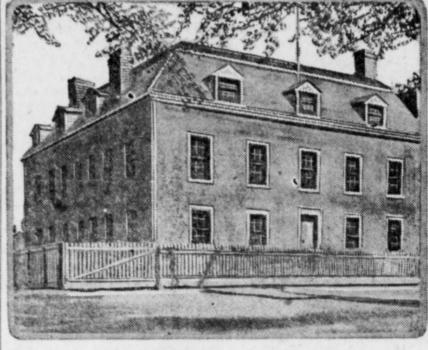

A good farm is worth good buildings. Any farm is good that provides a living for the family. Comfortable buildings help to make a poor farm good and a good farm better. Even the land that has been ruined may be brought back to life by the aid of live stock; but first there must be buildings to make the live stock comfortable. Near-There are a few types of barns which ly every farm is shy a building or two

The Refractory Ore Claim

By Oliver Harper

"What is to be done with that pre-

hous pair of fools up there is what I can't figure out," said Jim Barker, blowing a cloud of smoke from his stubby pipe.

"We just can't do anything," replied Joe Timmins, sending a blue cloud over to meet and mingle with that of Jim. "We've tried to tell them that they're foolish, but you can't git anything into that woman's head, except that we are all a set of d-scoundrels, and trying to chisel them out of a rich mine. I am plumb outdone with them, and yet we can't let them go on thisaway. Tomorrow will be New Year's, and there they are up there working like heroes at something that will never pay. I wish to goodness some of them smart Alecks in the big colleges would find some way of dealing with refractory ere. Who in Halifax sent 'em up there,

anyhow?" "Oh, some one in Havilah. You see, the chap, he's a lunger. Got sick in I'm sorry for them." some of them high skyscrapers in New York, and they sent him and that slip of a gal out here to rough it in the

"Well, he's in pretty fair health just so pretty! And, so they are, all green from placers. as emeralds, and full of gold, that you but which will never pan out a dollar to the hundred tons."

kept the saloon.

the trail from the Keystone mine.

the Keystone mighty quick. And, arsenic. where's Annette? She's wanted, too." anyway?" asked Jim.

"Matter? Matter enough, I should for news from the doctor, say. Here is this gal away from home New Year's festival for the boys-and to them saying: by Gosh, there won't be six ounces,

and now, now-well." "Weil-what?" asked the twenty nen crowding around him. "Well?" mocked he, "what'd you ex-

pect? She's a-needin' her mother just ow-that's what."

"I be a mud'," said the old Indian voman who had come and the three hastened up the trail.

The men looked at each other blankly. They knew that this young couple right away." had gone into the mountain hoping that the husband would grow strong. He did, but when Mary had discovered the lead they forgot all but that. Mary knew gold when she saw it and here it was, lying in the hard quartz, among the vivid greens of the arsenicar deposit, bright and pure. She had joy. found a rich mine! Together they raced the outcroppings, and saw that TRACTOR ON A RUBBER FARM the gold-bearing ledge was virtually would not be necessary. They took some of the richest specimens of their rock and went down to Havilah, to record their claim. Just for form they tated?

up their specimens and departed. They met a man who had a twenty- business would be greatly handicapped stamp mill to sell. It had been a bad venture. He set the young folks against all the people at Havilah and Clear Creek, and finally sold them the mill. The people who would have saved them | siderable time. from disaster now let them alone, and

walted for the catastrophe. It was hurry," replied the saleslady. bound to come with the first clean up. The mill was bought and laboriously Well, I like that!" hauled to the mine and set up. It had cost a thousand dollars for every stamp | ready to start for some time yet. He's

mine and a force of men engaged. They knew the uselessness of the work, but they were paid to work and not to

The twenty stamps were polished till they shone. The big hopper was ready filled with ore. The blankets had been laid along the incline and the trough made ready. The little stream of water that was to mix with the pulverized COLTS FOR GELDING TRADE rock was waiting to begin its work. The turbines below were filled with water, and the quicksilver there. All was waiting for the signal, but the Ingrams had spent their last dollar. Then, the great machine began to move, the stamps to rise and fall with rhythmic regularity, the broken rock to fill the trough and the water to flow. The Keystone mill was in full operation.

Winter had been abnormally open fallen in the mountains. Only a few light rains, and so it was that after nine weeks of blind labor the first real knowledge of the value of the mine would be known. The young people up at the mine were happy, and felt that their prospects were bright. The joy of achievement was greater than anything else. They would know tomorrow. The New Year should see the culmination of their toil and sacrifice, and its recompense.

But in her ignorance Mary had not foreseen how much she was to "need her mother" until New Year's eve.

Finally one of the men at the saloon remarked: "The whole business won't | thought fit to put them to. pan out an ounce. They were in a devil of a fix before, and now-well

"So am I," said Doc Stimson, "and I'm sorry just thirty ounces."

One of the other men remarked to the ceiling that he was sorry fifty ounces. Finally all present "chipped now, as you'd know if you seen him in" and there was a gathering of nearat work. But, they've sunk every dol- ly two hundred ounces of gold, some of lar they had in that d- old Key- it in bottons, from the retorts, some stone. She thought the stones were river dust, and some the dull grains

Almost without a sound the crowd could cut out with a pocket knife, started for the Keystone with the gold they had contributed. The watchman was so glad that he was not to be "I told him and her, when they took | lynched for not having told the foolout the claim papers that it was bad ish children the truth that he was perore, but they knew so much better feetly willing to enter the plot, which than I did that I finally let them go was to place all this gold into the relieved at once and save strain on ahead. Well, they have their twenty- turbine tub and allow Ingram to bestamp mill up and the first clean-up lieve it gold from his mine. The main will be made to-morrow. They are a point now was to keep the fatal truth pair of fools, but they are such en- from them. Later-well they would gaging fools-what will they do when see. So, they all sat down to wait they find out?" said the man who for daylight and possibly news from the shack. They put a stone in the At this moment a man who worked gear of the turbine so that the motion for Ed. Excellent Plan to Mouth Them and Give Them Some Work During Spring and Summer.

Colts for the gelding trade want taking in hand early, and should be well grown and well done from their birth, so that at two years old they should be big and strong enough to do some work. It is an excellent plan to mouth them, and work them a and so far not a flake of snow had | bit during the spring and summer that they come two years old. They do not want working very hard, but a day or two at plow, harrow, or cultivator, and then a day or two at rest, and then at it again for a few days, and so on, gets them tractable, and it seems to expand their muscles and induce growth.

Then when the harvest time comes they can be turned off and run through the autumn and winter, receiving just a little grain and chaff through the hard part of the winter to keep them fit, and they will come up at springtime, as three-year-olds, fit to take their places in any job that it is

It must be borne in mind that they should be taught to go anywhere and to do anything, so as to get accustomed to all kinds of work and noises as well. They must be taught to pull, and to back, and to stand still if re-

HORSE FEED AND PROTECTION

Two Important Winter Considerations Says Dr. McCampbell of Kansas Agricultural College.

Feed and protection are the two imortant considerations in caring for work horses in winter, in the opinion of Dr. C. W. McCampbell, associate professor of animal husbandry in the ansas State Agricultural college.

"The work horse must be fed and rotected in such a manner," said Docor McCampbell, "that he will be in the est possible condition to stand the

Splendid Farm Team.

hard work of early spring. Feeds are high in price this year and there will be a tendency to cut down on the ration of the horse, but such a policy is poor economy. One should consider carefully the feeding value of the available grains and roughage.

"It is possible to make a considerable saving in the cost of feeds by combining the right feeds. In most parts of Kansas oats and cottonseed meal in proportions of about one to six will be desirable. One can utilize a large amount of good, bright, clean straw if a little alfalfa hay is available."

Internal Parasites Is Never to Have Them.

About the only way to rid a flock of sheep of stomach worms and other internal parasites is never to have them, and the only way to never have them, that we know of, is to as frequently as possible change pasture. If a farm is so fenced that the sheep

can have different fields and pastures in season to range over, and the old pastures can occasionally be plowed up, not only will big and clean crop yields result but the flock is almost sure to be free from all internal parasites, healthy and vigorous.

SOFT CORN MADE PROFITABLE One of Best Uses Is Feeding to Hogs

and Steers, According to Nebraska Station. One of the most profitable uses for

soft corn will be in feeding hogs and steers, according to the department of animal husbandry of the University of Nebraska. One would be justified in feeding considerable protein supplement in conjunction.

Oil meal and cottonseed meal are relatively cheap taking into consideration the cost of good corn. Experiments have proved that they are worth more than their own weight in corn for feeding cattle.

BROOD SOW WINTER RATIONS

Corn, Tankage, Middlings and Ground Oats Recommended by Indiana Experiment Station.

Corn 90 parts and tankage 10 parts; corn 70 parts, middlings or ground oats 30 parts; corn 1 part, middlings 1 part and ground oats one part; corn 60 parts, bran 30 parts and oil meal 10 parts. All of these are excellent rations for breeding animals, especially for brood sows in winter.-Indiana Experiment Station. .

THE PROFESSOR COMES TO SEE THEM AND MAKES AN ANNOUNCEMENT THAT DEPRESSES CAROL-THEN SHE SURPRISES HIM

Synopsis .- The story concerns the household of Rev. Mr. Starr, a Methodist minister at Mount Mark, Ia., and the affairs of his five loveable daughters-Prudence, the eldest; Fairy, the next; Carol and Lark, twins; and Connie, the "baby." Prudence marries and goes away. Her place as "mother" in the home is taken by Aunt Crace. Fairy is engaged to wed. The twins and the "baby," just coming into womanhood, have the usual boy-and-girl love affairs, and the usual amazing adventures of adolescence.

CHAPTER VII-Continued.

"Did , y tell you about it?"

"Yes, they told me. They told me." "You must write it up while it is fresh noon. in your mind. You'll do it better while start you again. Maybe I was too hard the feeling is on you."

Lark gazed at him stupidly, not comprehending.

"Write it up?" she repeated confus-

CALVES WITH WHITE SCOURS Result of Infiammation of Lining of

Fourth Part or True Digestive Stomach.

White scours in calves is a form of diarrhea. It is the result of an inflammation of the lining of the fourth part or true digestive stomach, and to this, but I preferred my own job, is generally caused by changing the calf's milk or giving cold or skim milk when not used to it. The manure is very thin and of a yellowish-Aunt Grace nodded, with a warmly white color. The calf has pains, breathes heavily and groans at times, grits its teeth and keeps looking and falteringly, "didn't you tell me you around at its sides. Try to discover were to get five thousand dollars a the cause of the trouble, and if from a change of milk or giving it too cold,

apply this treatment: Give the calf good, warm milk to drink, following with two ounces of raw linseed oil, two ounces of lime water, one dram of laudanum. Mix and give as a drench. If this does not give relief follow with one dram of laudanum and two ounces of lime water. Mix and give three times a day in a little milk as a drench. Keep up this treatment and see that the animal is kept dry and warm until it

WARM WATER FOR DAIRY COW

Cheaper to Heat Supply Than for Animals to Do It Themselves With Expensive Feeds.

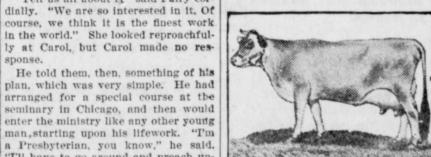

(North Dakota Agricultural College Bul-letin.)

A good supply of clean, fresh water should always be at hand for dairy cows. Much water is needed for the high-producing milch cow owing to the nature of her product, about 87 per cent of which is water. It should be handy at all times, and in the winter, if the tank is outside, heat should be applied to take the chill off the water. Cows will drink more water if warmed to 60 to 70 degrees Fahrenheit than if made to drink ice water. A tank heater can be provided at low cost that will keep water at proper temperature, thereby saving feed and energy of the animal. It is cheaper to warm ice water than to allow the cow to warm it with high-priced feed.

LEADING CLASSES OF COWS

Jersey Produces Lightest Calves and Holsteins Heaviest - Average Weight of Animals.

Taking the leading classes of dairy cows, the Ayrshire, Jersey, Holstein and Guernsey, we find the Jersey prouces the lightest calves and the Holstein the heaviest. They rank about as follows: Hoistein, Ayrshire, Guernsey

Champion Jersey Cow.

and Jersey. The male calves are the heaviest, running as an average 90 pounds for the Holsteins, 78 pounds for Ayrshire, 70 pounds for the Guernsey and 621/2 pounds for the Jersey, while the helfer calves average 88,

11/2, 69 and 60.7 pounds. REMEDY FOR CHAPPED TEATS

is always admired, and it is the laudable ambition of every woman to do all she can to make herself attractive. Many of our southern women have found that Tetterine is invaluable for clearing up blotches, itchy patches, etc., and making the skin soft and velvety. The worst cases of eczema and other torturing skin diseases yield to Tetterine. Sold by druggists or sent by mail for 50c. by Shuptrine Co., Savannah, Ga.-Adv.

Enforcing Peace. There is something better than this league to enforce peace; something that will preserve the natural tendencies to intellectual growth in the race, without requiring military aggressiveness as a national prerogative, writes Courtenay De Kalb, in the Atlantic. That is to introduce the principle of natural trade by taking steps to eliminate the fostering devices on which national aggrandizement depends. It might not be possible to reach every scheme for artificial tradedevelopment which will lift its head, but the tariff can be stripped off, and the granting of ship-subsidies and bounties, and all the cruder forms of industrial parentalism. This would at least go far toward the organization of the sisterhood of nations on the true competitive basis of relative inherent skill, knowledge, and ability. In that direction lies the open road to peace and progress. The world may not delude itself; it must take that highway, or accept the principle of the trade war which goes hand in hand with Mars.
