BUILDING HOMES IN LARGE GROUPS

Demand for Houses Presents Problem in Great Many Communities.

SAVING IN COST POSSIBLE

Designs Must Not Be So Much Alike selling each house in the group. In as to Be Monotonous Nor So Different as to Destroy

Harmony.

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to the subject of building, for the readers of this paper. On account of his wide experience as Editor, Author and Manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only enclose three-cent stamp for reply.

By WILLIAM A. RADFORD.

Homes for workingmen have come to be one of the serious problems of the nation's war enterprise. When the National army camps were built, thousands of building mechanics and laborers were brought in to handle the work. Many were housed temporarily in bunk houses or contractors' barracks.

The same is now true to quite an extent at the big shipyards.

Every one admits that this is not the ideal condition. It contains a serious threat to the working efficienty of the men, as well as to their moral natures. However, in the emergency it is the best that can be provided. In these big industrial centers where thousands of men must be brought together within a few weeks to carry out tain radical features that he wishes a large stupendous program of sudden to incorporate in his house, and as preparation, such emergency housing is long as he is the one to be pleased about all that can be provided.

even some small villages, are finding more or less conservative as the taste themselves woefully short on houses of the prospective owner is absolutely for the workingmen who are being unknown. The problem therefore, is called in by the sudden growth of to provide a house that is distinctive some local plant or factory. The war and yet contains no freakish special activity is reaching out into surprising features that are likely to impress prosplaces. All over the country we get pects in the wrong way. reports of this town needing 50 new town 25, another 100, and so it goes.

has to be moved ove

the sooner the saving it enects will more than balance the cost.

There are two things to guard against in the design of groups of houses such as are shown here. The, must not look so much alike as to be come monotonous; on the other hand they should not contrast so sharply that some of the houses look insignificant or that the combination seems to lack harmony. All the designs must fit into the general scheme and each one must present an attractive appearance both by itself and in combination witl the neighboring houses.

It's an entirely different problem to build one house for some one following his own and your suggestions than to build a group with the object of the first case the owner may have cer-

Relieve Your Rheumatism For 25c.

NR does it by improving digestion, assimilation and elimination -the logical way.

NR Today-Relief or No Pay

There are three vital processes of human existence,—the digestion of food, the extraction of nourishment from it and the elimination of the

Maste,

Let anything interfere with these processes,—let them be interrupted or improperly carried on, and sickness of some kind follows.

of some kind follows.

Poor digestion and assimilation means failure to derive full nourishment from food and that in turn often means impoverished blood, weakness, anemia, etc. Poor elimination means an accumulation of waste matter which poisons the body, lowers vitality, decreases the power of resistance to disease and leads to the development of many serious ills.

Rheumatism,—due to some interference with the process of elimination, failure to get rid of certain body poisons,—cannot be expected to yield to any medicine that fails to correct the condition responsible for it. Could any reasonable person expect to rid himself of rheumatic pain as long as

rheumatic poison is allowed to remain in the body.

Think of this. It explains the success of Nature's Remedy (NR Tablets) in so many cases where other medicines have failed. Thousands are using NR Tablets every day and getting relief. Why pay five or ten times as much for uncertain things? A 25c box of Nature's Remedy (NR Tablets), containing enough to last twenty-five days,—must help you, must give you prompt relief and satisfactory benefit or cost you nothing.

And Nature's Remedy is not only for the relief of rheumatism. It improves digestion, tones the liver, regulates kidney and bowel action, improves the blood and cleanses the whole system. You'll feel like a new person when you've taken NR Tablets a week. You've tried the expensive medicines and doctors, now make the real test. You'll get results this time. Nature's Remedy (NR, Tablets) is sold, guaranteed and recommended by your druggist.

BUY YOUR FUEL NOW SAYS ADMINISTRATOR

The Informer is glad to pub-Read what he says:

In a letter from the United from about four hundred cars of States Fuel Administration in Washington, they requested that I write you and in turn instruct you to give wide publicity among your citizens to the fact that the Government looks for a more serious shortage of coal this coming winter than was experienced during the winter just passed. With this condition facing us. the Government earnestly requests and urges all consumers ing, he should remit 30 cts extra to buy their fall and winter sup ply of coal during the summer months from their retail coal deal r and store same at home.

> Now gentlemen, the prudent man endeavors at all times to protect his home from want and suffering, and it is now up to him to act in regard to his fall and winter fuel supply, whether it of Texas should give this his immediate attention and make his arrangements at once, so that when winter time comes, his loved ones will be protected. I know that they will do this when the necessity of it is called to their attention, and it is up to you and to me to see that the" people know the true conditions that confront them, by giving the widest publicity possible to the above.

To enable the consumer to lav in his supply at less cost, the Government has reduced the price of coal for summer ship ments, the April price being lower than other summer months. They graduate up from April. monthly, until September, when practically the same prices in effect last winter will again become operative. The consumer should bear this in mind and buy early.

While it is desired that all domestic consumers shall purchase their requirements, yet you are requested to caution consumers to buy only a sufficient amount to do them -their actual requirements between now and March. 1919. Every citizen should practice economy, for his Government's sake as well as his own. Do not waste fuel, but conserve it in every manner possible.

Building-up for the Spring Attack at the Front is a good deal like putting the body in condition for an invasion of the germs of grip, pneumonia or "Spring fever" here at home.

At this time of the year most people suffer from a condition often called Spring Fever. They feel tired, worn out, before the day is half thru. They may have frequent hendaches and sometimes "pimply" or pale skin and white lips. The reason for this is that during the wintertime, shut up within doors, eating too much meat and too little green vegetables, one heaps (uel into the system which is not burned up and the clinkers remain to poison the system—a clogging up of the circulation—with inactive liver and kidneys. Time to put your house in order.

For an invigorating tonic which will clarify the blood, put new life in the body, sparkle to the eyes, and a wholesome skin, nothing does so well as a glyceric herb extract made from Golden Seal root, Blood and Stone root, Oregon grape root and Wild Cherry bark. This can be had in convenient, ready-to-use tablet form at all drug stores, sixty cents, and has been sold for the past fifty years as Dr. Pierce's Golden Medical Discovery. By reason of the nerves feeding on the blood, when the blood is pure the nerves feel the effect, and neuralgia or other nerve pains disappear because such pain is the cry of the starved nerves for food. When suffering from backache, frequent or scanty urme, rheumatic pains here or there, or that constant tired feeling, the simple way your druggist. In tablets, sixty cents.

MEETING DEADLY GAS ATTACKS

PE United States Army is being prepared to meet the gas attacks of the enemy, the means of protection having been devised by the gas defense service of the medical department, which comprises about 100 officers and approximately 600 enlisted men.

The two principal factors in gas defense are effective masks and thorough training of soldiers in the use of masks and various methods of avoiding contact with poisonous vapors.

Experts who have been sent to this country by the allied governments have pronounced the present American masks the most efficient in existence. The production of these masks is progressing at a rate which insures that the requirements of the American troops abroad will be amply supplied.

At each cantonment in the United States a gasdefense school has been established and placed in charge of a divisional gas officer, who works in conjunction with the chemical adviser, both trained in the theory and practice of meeting gas offensives. Through these schools every officer and man receives instruction as to proper means of gas defense.

The use of gas in warfare dates back to about 404 B. C. The Spartans saturated wood with pitch and sulphur and burned it under the walls of cities which they were attacking. For several centuries gas had not been used in warfare and The Hague convention definitely ruled against it. However, on April 22, 1915, the Germans liberated great clouds of gas against Canadian troops near Ypres. Terrible destruction and demoralization resulted from this first gas attack, and within a week England made plans for gas warfare against the Germans. Gas is now an everyday part of war.

Gases may be employed in the form of clouds, or in shells, bombs and hand grenades. The first gas attacks in the present war were in clouds. Fumes were liberated from steel containers which were distributed in groups of three or four at intervals of 50 yards along the trenches opposite the line to be attacked. Tubes, provided with a stopcock attachment, were connected with the gas tanks, and the end of the tube was passed over the parapet. When the attack was intended, a signal was given and the stopcocks were opened, allowing the gas to escape in the form of liquid which immediately vaporized.

Soon after the first German gas attack English and French women sent to the front hundreds of thousands of home-made gas masks. For the most part they were merely bandages impregnated with chemicals to wrap around the mouth and mase.

The next step in gas masks was a cloth belief or hood which had been dipped in neu ralizing solution, the bottom of which was tucked in the collar. The next improvement was to put in an exhaust or outlet for the exhaled air. This type of mask has been used extensively.

The small box respirator mask was next developed, and it is the model of the mask we are at present using. It is the highest development, affording good protection. It has an impervious face-piece, with glass or celluloid eyepieces, held in place by rubber bands around the head. A canister is carried in a small knapsack and a flexible tube connects the box in the face-piece. Inside the face-piece is a small wire clamp with rubber pads which fits on the nose and forces the wearer to breathe through his mouth. The end of the flexible tube has a rubber mouthpiece through which the man breathes. The incoming breath comes through the canister, which is filled with several layers of special chemicals of an absorbent nature which neutralize or render harmless the gas-laden air. The outgoing breath passes outside the face-piece through a small rub-

ber valve.

The American gas defense service is divided into three separate parts: (1) Field supply section; (2) field training section; (3) overseas repair section.

The function of the field supply section is to manufacture or procure all gas-defense materials and equipment. The big work of course is to furnish our troops with effective masks. The small box respirator type of mask, admittedly the best mask in existence, was accepted as a model.

The manufacture of a gas mask of this type presented a problem. No manufacturing firms had experience with an article of this kind. More than ordinary care must be used in making parts because the slightest defect would render the mask useless. The wide variety of materials going into the mask made it necessary to have the parts made in separate plants and assembled at a central plant. At present about sixty manufacturing firms contribute directly to the making of the American mask.

With no actual experience to depend upon, much experimental and research work was necessary. An extensive experimental organization was built up with branches in several cities. Recently it was decided to establish a government-operated plant to handle the final assembling and the difficult sewing operations on the face-piece. This plant will soon be in full operation, with about 4,000 employees.

The American mask, similar to the Brit'sh, is as mechanically perfect as the best experts in the country have been able to produce. The vital feature of any respirator mask is the chemicals contained in the canister. These chemicals and absorbents are made from secret formulae.

The face-plece consists of a base of cotton fabric, carefully rubberized. These face-pleces are made to fit various types of faces. A network of elastic bands over the head holds the face-piece in place. The ears are left *neovered.

The mask is carried in a knapsack at the left hip, supported by a shoulder band. When troops approach a danger zone, the straps are shortened and the knapsack is shifted to rest high on the chest, ready for instac? as This is known as the "alert position." The soldier has merely to open the knapsack, pull out the flexible hose with the face-piece attached, put the rubber mouthpiece in his mouth and adjust the bands over his head. The nose clip can easily be adjusted from the outside over the face-piece is on. This nose clip insures

MEN BEING DRILLED TO ADJUST MASKS IN. SIX SECONDS

that even if the fabric of the face-piece should be pierced, the soldier would still be breathing entirely through his mouth.

For every mask made there is at least one extra canister. These canisters are detachable from the tube. When a canister has lost its efficiency, it can be detached and a new canister put on.

About the first thing a soldier wants to know about a gas mask is how much protection it affords him. The best answer to this question is that the present American mask affords more protection than any device in existence. The chemicals in the canister will neutralize the heaviest concentrations of gases for a period at least ten times longer than the possible duration of any gas attack.

In every knapsack is a record card, on which each soldier must enter the time that his mask has been exposed to gas. This record, combined with subsequent examination, makes it possible to judge accurately when there is any danger of the chemical being worn out. Before that point is reached a new mask is issued.

While the main function of the field supply section is to supply gas masks, it is also responsible for the supply of all other gas-defense equipment. This includes masks for horses, which consist of several layers of fabric which are impregnated with neutralizing chemicals. Trench or flapper fans must also be supplied in considerable number. Oxygen inhalers and oxygen bottles for use in field and base hospitals are also supplied in large numbers. Instruments for the detection of gas and the spreading of gas alarms are necessary. These consist of horns, rattles and special detecting devices.

There is perhaps no feature of modern warfare in which the psychological element is more important than in connection with gas. Gases are uncanny to the untrained man. Every soldier must be made to understand that there is no protection except the gas mask, and he must believe in the value of his equipment. He must realize that the equipment itself will not do the work unless he is skillful in adjusting it quickly and being accustomed to wear it without feeling hampered.

Reports of gas attacks show that the casualties are caused, not so much by defective masks, as by lack of training. Here are excerpts from official reports from the western front, giving reasons for gas casualties:

"Officers and men sleeping in dugouts without having their masks attached to them, or being caught away from their dugouts without their masks."

"Men in support trenches not getting the warning in time."

"Helmets being worn under overcoats, with consequent difficulty in getting them out and putting them on quickly."

"Men thinking that gas was gone and taking their masks off." Since casualties like these occur every time a

Since casualties like these occur every time a gas attack is made, it is obvious that simply to provide troops with gas masks is not enough. They must be drilled until they feel their respirators are a part of their dress—more necessary than a pair of shoes, for they must never depart from them.

They must learn to give the alarm instinctively and to have such confidence in their masks that under no circumstances will they take them off. This means stiff military discipline. It necessitates training that is different from anything that was ever attempted, since it deals with a weapon that is noiseless and sometimes invisible. It is be work of the field training section of

It is be work of the field training section of the gas-defense service to bring home to the American soldiers the importance of his gas mask, to drill him in its use and to inspire confidence in its efficacy.

The gas defense schools at all camps provide training in the theory and practice of gas defense.

As in all other elements of warfare, the principles of defense can be comprehended only through a knowledge of offensive tactics.

In training troops, conditions are created in the field which resemble as nearly as possible actual conditions encountered at the front. The student learns to get his mask on in a hurry, six seconds being the standard time when the knapsack

containing the mask is hanging at the chest in the "alert position." Dexterity of motion must be developed.

Series of trenches with durants have been con-

Series of trenches with dugouts have been constructed at each cantonment.

A gas attack is arranged. The class is placed in the trenches, each man is given a definite assignment, sentries are posted, the alarms are made ready and the dugouts occupied. Without warning clouds of smoke and chlorine are liberated by the instructors. Masks are hurriedly put on, alarms sounded, sleeping men in dugouts aroused and the curtains lowered. The attack ceases, the trenches are cleared, the air tested, and permission to remove masks is given. Suddenly a second and more concentrated cloud comes over and the performance is repeated.

Sometimes the class is taken on a hike, preferably at night. Suddenly a report is heard and a harmless-looking smoke cloud arises 15 or 20 feet away and drifts towards the column. Woe to the man who does not get his mask on at once. The instructor has thrown a paper gas bomb, that may emit a vile and nauseating gas, or one that will sting the eyes more than the concentrated juice of a thousand onlons.

Gas warfare is new. The methods of gas and shell and cloud attack are being changed almost daily. New conditions can only be met by thorough training and rigid discipline.

The overseas section of the gas-defense service consists of about 15 officers and a number of enlisted men who will conduct a repair factory in France. Masks with worn-out canisters will be sent to this country to be detached from the tube and new canisters put on. This section will also be equipped with sewing machines and other appliances to do general repair work on the mask.

BABY MISTOOK SNAKE FOR TOY.

Mrs. Richard D. Corder placed her little daughter Mildren in her go-cart in the front yard of their home, near Lawrenceburg Junction, her.

She saw a large blacksnake crawl into the cart and nestle on baby's pinafore. Darting its head here and there the blacksnake intently watched the baby.

Probably the infant thought a new toy had

come and put out its chubby hand to grasp the snake, which eluded the child.

Terror nearly paralyzed Mrs. Corder. She could not move, but she uttered a shriek.

Mrs. Charles W. Corder, her sister-in-law, who was calling on her, ran to her, and she pointed to the baby cart. Mrs. Charles W. Corder rushed out, seized the snake by the tail and flung it yards away, and the baby began crying for its pretty new toy.

LESS DANGER IN WAR.

In this war fourteen out of fifteen men come through safe and sound, not more than one man in thirty is killed, and only one in 500 loses an arm or leg. In the Civil war the per cent was much higher. In fact, the soldier in this war stands no greater chance of being killed or injured than a man engaged in a hazardous occupation.

CAUSE AND EFFECT.

Flatbush--My next door neighbor was taken sick last night,
Bensonhurst-Too bad.

"Yes, we telephoned for the doctor, but he couldn't come."
"How is he today?"

"Oh, he's worse. The doctor came today!"--Yonkers Statesman.

DIFFICULT ECONOMY.

"I've got a good way for you to save money,"
"Well?"
"Whenever you see a real bargain advertised—

"Yes, my dear. Ym to buy it."
"No, you are to restrain from buying it no matter how cheap the article may be if it is some
thing you don't need."

Spring Colds Are the Worst

They lead to catarrh and pneumonia. They weaken the entire system and leave it unable to resist the sudden changes. They interfere with your digestion and lessen your activity. Neglected they soon become that dread disease known as systemic catarrh. Don't neglect them. It's costly as well as dangerous.

PERUNA Will Safeguard You

Have a box of Peruna Tablets with you for the sudden cold or exposure. Tone your system up with a regular course of the liquid Peruna, fortify it against colds, get your digestion up to normal, take care of yourself, and avoid danger. If you are suffering now begin the treatment at once. Give Nature the help she needs to throw off the catarrhal inflammation, and again become well.

again become well.

Peruna has been helping people for 44 years. Thousands of homes rely on it for coughs, colds and indigestion. It's a good tonic for the weak, as well.

EMPEY GETS INTO THE FRONT LINE TRENCH-AND WISHES HE WERE BACK IN JERSEY CITY.

Synopsis.—Fired by the sinking of the Lusitania, with the loss of American lives, Arthur Guy Empey, an American living in Jersey City, goes to England and enlists as a private in the British army. After a short experience as a recruiting officer in London, he is sent to training quarters in France, where he first hears the sound of big guns and makes the acquaintance of "cooties."

CHAPTER II .- Continued.

The greatest shock a recruit gets when he arrives at his battalion in France is to see the men engaging in a "Don't you 'yep' me. Say, 'Yes, ser-"cootie" hunt. With an air of con-geant major.'" tempt and disgust he avoids the company of the older men, until a couple of days later, in a torment of itching, he also has to resort to a shirt hunt, or spend many a sleepless night of misery. During these hunts there are tots of pertinent remarks bandled back and forth among the explorers, such as, "Say, Bill, I'll swap you two little ones for a big one," or, "I've got a black one here that looks like Kaiser

One sunny day in the front-line trench, I saw three officers sitting outside of their dugout ("cooties" are no respecters of rank; I have even noticed a suspicious uneasiness about a certain well-known general), one of them was a major, two of them were exploring their shirts, paying no attention to the occasional shells which passed overhead. The major was writing a letter; every now and then he would lay aside his writing-pad, search his shirt for a few minutes, get an inspiration, and then resume writing. At last he finished his letter and gave it to his "runner." I was curlous to see whether he was writing to an insect firm, so when the runner passed me I engaged him in conversation and got a glimpse at the address on the envelope. It was addressed to Miss Alice Somebody, in London. The "runner" informed me assigned to different companies. The that Miss Somebody was the major's boys in the brigade had nicknamed sweetheart and that he wrote to her this general Old Pepper, and he cerevery day. Just imagine it, writing a tainly earned the sobriquet. I was aslove letter during a "cootie" hunt; but signed to B company with another such is the creed of the trenches.

CHAPTER III.

I Go to Church.

Upon enlistment we had identity we were going up the line, and our right and left. Then a Fritz would disks issued to us. These were small march began. disks of red fiber worn around the neck | It took us three days to reach reby means of a string. Most of the Tommies also used a little metal disk which | ing the sound of the guns nearer and they wore around the left wrist by means of a chain. They had previously figured it out that if their heads were blown off, the disk on the left wrist would identify them. If they lost their left arm the disk around the neck would serve the purpose, but if their bead and left arm were blown off, no one would care who they were, so it did not matter. On one side of the disk was inscribed your rank, name. number and battalion, while on the other was stamped your religion.

C. of E., meaning Church of England; R. C., Roman Catholic; W., Wesleyan; P., Presbyterian; but if you happened to be an atheist they left it blank, and just handed you a pick and shovel. On my disk was stamped C. of E. This is how I got it: The lieutenant who enlisted me asked my religion. I was not sure of the religion of the British army, so I answered, "Oh, any old thing," and he promptly put down C. of E.

Now, just imagine my hard luck. Out parade was compulsory!

his head in the door of the billet and line and learnt something." shouted: "C. of E. outside for church I immediately quit "chucking my

a loud voice, he asked, "Empey, aren't

you C. of E.?" I answered. "Yep." In an angry tone, he commanded, whistle blast, immediately followed by

"I did so. Somewhat mollified, he ordered, "Outside for church parade." I looked up and answered, "I am on the right and left of the road, and crouched on the ground. No other not going to church this morning."

He said, "Oh, yes, you are!" I answered, "Oh, no, I'm not!"-But

We lined up outside with rifles and bayonets, 120 rounds of ammunition, wearing our tin hats, and the march to church began. After marching about five kilos, we turned off the road into an open field. At one end of this field the chaplain was standing in a limber. We formed a semicircle around him. Overhead there was a black speck circling round and round in the sky. This was a German Fokker. The chaplain had a book in his left hand-left eye on the book-right eye on the airplane. We Tommies were lucky, we had no

After church parade we were marched back to our billets, and played football all afternoon.

books, so had both eyes on the air-

CHAPTER IV.

"Into the Trench."

The next morning the draft was inspected by our general, and we were American named Stewart.

For the next ten days we "rested," repairing roads for the Frenchies, drilling, and digging bombing trenches.

One morning we were informed that

serve billets-each day's march bringnearer. At night, way off in the distance we could see their flashes, which piece of shell had gone through his lighted up the sky with a red glare.

Against the horizon we could see numerous observation balloons or "sausages" as they are called.

On the afternoon of the third day's march I witnessed my first airplane being shelled. A thrill ran through me and I gazed in awe. The airplane was making wide circles in the air, while little puffs of white smoke were bursting all around it. These puffs appeared like tiny balls of cotton while after each burst could be heard a dull "plop." The sergeant of my platoon informed us that it was a German airplane and I wondered how he could tell from such a distance because the plane seemed like a little black speck in the sky. I expressed my doubt as to whether it was English, French or German. With a look of contempt he further informed us that the allied antiaircraft shells when exploding emitted white smoke while the German shells of five religions I was unlucky enough gave forth black smoke, and, as he exto pick the only one where church pressed it, "It must be an Allemand because our pom-poms are shelling, and The next morning was Sunday. I I know our batteries are not off their was sitting in the billet writing home bally nappers and are certainly not to my sister telling her of my wonder- strafelng our own planes, and another fal exploits while under fire-all re-piece of advice-don't chuck your cruits do this. weight about" from that time on.

Diagram Showing Typical Front-Line and Communication Trenches.

RECORD OF HOLSTEIN COW

California Animal Sets High Mark by Producing 24.01 Pounds of Butter in Seven Days.

Purebred Holstein cows are certainly doing their level best to respond to Hoover's injunction to increase produc-Records are being broken so rapidly that a cow no sooner gets used to her championship laurels than another one snatches them away.

Miss Valley Mead De Kol Walker has just added to the dairy fame of California by breaking the record for butterfat production in the junior threeyear-old class, by producing 24.01 pounds of butter in seven consecutive days, in the division covering tests begun not less than 240 days from freshening.

Miss Valley Mead De Kol Walker freshened at the age of three years, five months, twenty-seven days, and began her test eight months after freshening. In the seven days she produced

Miss Valley Mead De Kol Walker.

445 pounds of milk, yielding 24.01 pounds of butter. Her prior record, begun 11 days from freshening, is 688.6 pounds of milk, yielding 36.80 pounds of butter. She is making a large yearly record and is due to calve again within the year.

By yielding more than 24 pounds of butter in a week after having been milked for eight months she has established a new world's record, displacing Finderne Holingen Fayne, whose record, begun 356 days after freshening, is 339.1 pounds of milk and 22.57 pounds of butter.

TRAINING FOR YOUNG BULLS

Should Be Taught to Be Led by Halter When Quite Young-Caretaker Must Be Master.

When quite young, the bull should be trained to be led by a halter. By the time he is a year old, a strong ring should be inserted in his nose so he can be led by a staff. It is not safe to try to lead a grown bull merely by a halter or rope fastened to his ring. In | year. leading by the staff, the caretaker should always walk at the side and never in front of the bull. One of the essentials in training the young bull is that he must be taught that his caretaker is his master. Bulls known to be vicious usually are handled with care, with the result that fewer accidents are likely to occur with them than with those considered gentle.

SILAGE FOR DAIRY ANIMALS

Found Superior to Corn Fodder by Experiment Stations - Larger Amount of Nutrients.

Experiments conducted by experiment stations demonstrate that sliage is superior to corn fodder for dairy cows. Cows receiving silage in the ration produced 13 per cent more milk than cows receiving corn fodder. Henry in "Feeds and Feeding" states that "Silage gives better results than dry corn fodder for the reason that cows fed the succulent palatable silage usually consume a heavier ration than those fed the dry fodder and hence have a larger amount of nutrients available for milk production after the maintenance requirements of the body have been met."

LEAVING CALVES WITH COWS As Milk for First Four Days Is Unfit for Human Consumption, Leave Calf That Time.

Practical dairymen differ in their oninion as to the length of time the calf should be left with the cow. The first milk, or colestrum, is necessary to cleanse the digestive system of the calf and get it in working order. The younger a calf is taught to drink the easier, but as the milk of the cow is un'it for human consumption for at least four days the calf may well be left with the cow for that time. Also, the ndder of the cow is generally inflamed and often caked and the nursing of the calf helps to relieve this condi-

NO CURE FOR WHITE SCOURS

Disease Is Generally Fatal, Calf Dying in Day or Two-Disinfection Is Favored.

White scours is caused by a germ entering through the navel cord soon after birth. If the germ once gets in the dairy barn all the calves born are liable to the disease within a few hours unless the practice of alsinfecting the navel is followed. There is no satisfactory remedy. It is generally fatal, the calf dying within a day or ous days without also slaying his ous

Our Part in Feeding the Nation

(Special Information Service, United States Department of Agriculture.) LET THE BEES HELP THE SUGAR SUPPLY.

Save the Swarms and Make Every Colony Do Its Best This Year.

BEES WILL HELP **PROVIDE SWEETS**

Better Care of Colonies Is Best Way to Quicken Supply of This Crop.

SUGAR NEEDED TO HELP WAR

Present Stock of Honey Could Be Increased 10 to 20 Times Without Appreciable Increase in Cost Per Pound.

More honey is needed to help the sugar supply-and needed in 1918. It imperative, using the language of officials of the United States department of agriculture in a recent publication, that we increase not only the sugar crop in the United States, but every possible supply of sweets, and honey is one of the supplemental sweets the supply of which can be enlarged without great effort. Not only should those who already keep bees enlarge the number of their colonies, but the industry should also be extended, say federal officials, to localities where beekeeping has not been tried on a commercial scale. It is important that efforts be made to make the honey increase immediate-more honey this

Provides Nutritious Food.

It is quite possibly for the American beekeeping industry to be developed so that the honey crop will be ten times what it is at present. Not only would such a develorment be valuable in an emergency, such as the present crisis, but in normal times, to which all hope the nation may speedily return, the beekeeping industry can provide a concentrated nutritious food. almost universally liked and assuredly an article of diet preferable to the inferior sirups and jams so commonly used. The beekeeping industry may be the means of conserving a national resource now largely wasted, changing it into nature's own sweet. The raw material is free on every hand; the investment for equipment is small in comparison with other branches of agriculture; the profits are fully commensurate with the study and labor involved. It would seem profitable to stop such a waste of so desirable a supply of sugar. This waste can be prevented only by the education of bee-

In selecting a place for commercial beekeeping, attention should be paid to the regions best adapted to the industry, and it should also be remembered that not all localities within a main region are equally valuable. The chief honey regions of the United States are (1) the white clover region of the Northeast, (2) the southeastern region, west to eastern Texas, with a wide variety of nectar sources; (3) the alfalfa region of the West; (4) the mountain-sage region of southern California, and (5) the semiarid region of Texas and adjacent states. In all of these regions commercial beekeeping is practiced extensively and in all of them, too, there is room for a great expansion of the industry as a commercial enterprise. In addition to these larger regions many more restricted areas offer special inducements to the beekeeper.

Not Always Profitable

But even where colonies of bees are sufficiently numerous and where nectar is freely secreted, beekeeping is not always considered profitable. This results from the nature of the industry. A colony of bees does not always gather sufficient honey for its own use and also enough so that the beekeeper can take honey for himself. It is only when bees are properly handled that they yield to the beekeeper the fullest return, and to an unusual degree beekeeping is profitable to just the extent to which the beekeeper applies intelligent care.

Success in beekeeping depends upon the beekeeper's skill in two lines of effort-keeping the colonies strong by proper care in winter and keeping the lonies from swarming. The failure to take proper care of bees in winter is | mentioned and other vegeta

a source of the greatest loss now experienced by beekeepers, and this applies to almost all parts of the United States; yet it is a simple matter to protect the bees in the hives-one which will put more dollars in the farmer's pockets and more bees in his hives. The essentials to the greatest success with bees are discussed in numerous textbooks and bulletins published by the state agricultural colleges and the United States department of agricul-

HONEY'S CHANCE TO HELP INCREASE SUGAR SUPPLY.

The average annual honey crop of the United States is about 250,000,000 pounds and 18 sufficient to supply each man, woman and child with about 21/2 pounds a year, which is equivalent to 3 per cent of the amount of sugar they consume in normal time. Thus there is ample room for expansion of both the production and consumption. The present use of honey in the home usually is as a substitute for jellies, jams and sirup. It is. little used in domestic cooking or baking, but this use should be increased. While honey within recent years has sold at prices sufficiently low to justify its use as a substitute for sugar, it is rarely used in commercial food manufacturing except in the making of certain cakes which must be kept moist for a considerable time. Usually, however, the supply of honey is so inadequate that most of the crop can be used as a spread for bread. With the use limited as it is, many people in the United States rarely eat honey, but it is evident that there might be developed a ready sale for honey as a supplement to sugar, if production were increased many times.

Starting With Bees.

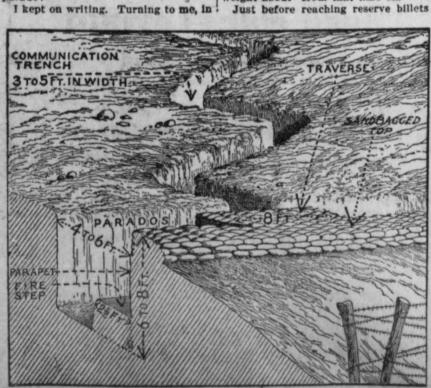

The best place to buy bees is near home. There are hundreds of colonies in almost every county which are unproductive and which might better change hands, bee specialists of the United States department of agriculture believe. If the prospective beekeeper does not know where these are. a small advertisement in a local paper will often locate them. If colonies cannot be found near by they can be bought of dealers in bees who advertise in the bee journals.

The best hive for all parts of the country is the 10-frame Langstroth, which is the American standard. If possible buy bees already established in these hives but if only other hives are available the bees can later be transferred to the desired hive,

An advantage in buying bees locally is that the bees are usually delivered by their former owner. If it is necessary for the beginner to go for the bees the hive should be securely closed with wire cloth just before dark when the bees are all in the hive, plenty of ventilation being provided. Usually the hive cover is removed and the top of the hive covered with wire cloth

Look to 1919 Seed Now

To be prepared for a possible scarcity of seed next year, growers of root crops of all kinds would do well to take steps to insure at least a partial supply by growing seed themselves. specialists of the United States department of agriculture advise. This can be done only by the use of roots already grown and now in the ground or held in storage. Such crops as carrots, beets, onions, turnips, rutabagas parsnips and salsify are involved owing to unfavorable weather co tions so far this year in regions where the chief seed supply of these crops is produced. This fact, together with the uncertainty of the usual European sources, which cannot be relied upon to supply us, threatens a very conerable shortage for next year's p ing. Since it takes two years to produce these seeds, this shortage can only be alleviated by the planting for seed of roots already grown. Farme Bulletin 884 gives directions for the home production of seed of those crops

LOYAL AMERICANS MUST CONTRIBUTE

CRUSHING OF GERMANY CAN BE ACCOMPLISHED ONLY BY OUR FINANCIAL AID.

RESPOND TO LIBERTY LOAN

Appeal to All True Citizens to Help Eliminate the Diseased Tree Lying Across the Path of True Democ-

(By WINSTON CHURCHILL, Who Recently Returned From the War

Germany may be likened to a great tree that has fallen across the path of democracy. The trunk is being chopped through by two axes, the military ax and the propagandist ax. If the trunk is to be severed and the obstruction removed, neither ax must be spared. Americans must contribute willingly to help their allies. to support their army and navy, which will be the deciding military factor in

the struggle. Our American president was the first world statesman to make clear that while a military victory is essential, it is not in itself adequate. The great significance of this war lies not on the battle lines, but behind them. It is a war for human liberty. and that which restricts human liberty, not only in the German empire, but also in America and England and France and Italy and Russia must be abolished. We are beginning to perceive that the future progress of democracy depends on national unselfishness and international co-opera-

tian scientifically conceived. Issued World Proclamation.

In a series of masterly state papers Mr. Wilson has announced to the world that America enters the war unselfishly, and has defined the true issue for all the peoples of the earth-even for those deluded portions of the German population which, because of a false system of education, have hitherto upheld the hands of the worst enemies of liberty, the junkers. Until quite recently, one of the most disquieting symptoms from the point of view of the allies was a discontent with, if not an actual opposition to, the war of large elements among the working classes of the allied peoples. In Russia, where democracy was most cruelly suppressed, where conditions for the peasant and the workingman were hardest, a revolution actually took place-a revolution that has sounded the keynote of our times. The world service which our president is doing is that of enlisting the alleclance of those masses for the He is convincing them that it is their war. And these are they upon whom the evils of an outword economic system have pressed hardest, and who hitherto have seen little hope that victory over the Germans meant their own deliverance. Mr. Wilson has issued a world proclamation of emanci-

pation from economic slavery. Make Their Own Treaties. He not only declares that powerful nations shall cease to exploit little nations, but that powerful individuals shall cease to exploit their fellow men. He declares that henceforth no wars shall be fought for domination, and that to this end secret treatles shall be abolished. The peoples through their representatives shall make their own treaties. And just national democracy insures to the individual the greatest amount of self-determination, of self-realization, world democracy shall insure self-determination to the individual nations of the earth, in order that each may be free to make its own contribution to world derioc-

Fighting for Oppressed.

This is the spirit in which America has entered the war. We are fighting for the oppressed everywhere. And we are equally determined that the injustice and inequalities that exist in our own government, the false standards of worth, the materialism, the luxury and waste shall be purged from our midst. We shall seize this opportunity to finish up the cleaning of our own household. To sustain our army and navy in the struggle for such a cause, to uphold our president, to aid our allies who have fought so long and so bravely, these are worthy of our sacrifices. I am confident that the response of the American people to the third Liberty loan will be generous.

Bonds Feed the Boys. Every farmer knows how his boys like to eat. Mother's fried chicken and apple dumplings and pumpkin pies haven't a chance in the world when the boys sit down at table. Lots of farmers' boys are in France and the farmer doesn't want them to go hungry over there. Liberty Bonds buy food for them. /

Don't Bury Your Bond. When you and your neighbor have bought your Liberty Bonds, don't take them home and hide them in the cupboard. Take them to your country banker and have him give you certificates of deposit for the bonds. Your banker can take these bonds to a Federal Reserve bank and borrow money for your use in case you suddenly find yourself in need of funds. Hiding a bond is as bad as hoarding money. Keep the bonds and the money in circulation and the country will pull through his cris's all right.

Lemons Whiten and Beautify the Skin! Make Cheap Lotion

The juice of two fresh lemons strained into a bottle containing three ounces of orchard white makes a whole quarter pint of the most remarkable lemon skin beautifier at about the cost one must pay for a small jar of the ordinary cold creams. Care should be taken to strain the lemon juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, smoothener and beautifier.

Just try it! Make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It should naturally help to whiten, soften, freshen and bring out the hidden roses and beauty of any skin. It is wonderful for rough,

red hands. Your druggist will sell three ounces of orchard white at little cost, and any grocer will supply the lemons. Adv.

He Did.

He finally managed to get the words. from between his teeth. "Will you marry me, Ethel?" be

stammered. She had just met somebody she liked better, and trying to let him down easy, she began: "I thought you l new better--'

He choked back the lump of bkterness when he realized the position which she was attempting to assume "Oh, sure I do, but they have all turned me down," he replied.

Spartan Women Suffered Untold Tortures but who wants to be a Spartan? Take "Femenina" for all female disorders. Price 50c and \$1.00.—Adv.

What "His Bit" Really Means. As first used in England, "His Bit" was intended to convey the impression of "his all," but the term "bit" as used in this country rather minimizes the task before us. Men think of one doing "lis bit" in a sense of smallness rather than in a sense of consecration of their all. Let's find some new expressionstronger, more emphatic, more all-embracing, and yet not profane, which conveys the thought that we must do our utmost in this great world war .-Manufacturers' Record.

Dr. Pierce's Pellets are best for liver, bowels and stomach. One little Pellet for a laxative, three for a cathartic. Ad.

Contrariness.

"Speaking of the kaiser's contrary or arbitrary attitude in this peace talk," says a well-known legislator, er was called to the chair during a session to act as speaker pro tem. A motion was made to lay a certain resolution on the table. The speaker put the motion like this:

"'All those who want the resolution to lay on the table say ave! All those who want to be contrary say no!"

Swift & Company's 1918 Year Book

It shows that Swift & Company sells the meat from a steer for less money then the live steer cost! Proceeds from the sale of the hide, fat, and other by-products

covered all expense of dressing, refrigeration, freight, selling expense and the profit of \$1.29 per steer as shown by Swift & Company's 1917 figures as follows:

Average price paid for live cattle per steer \$84.45 Average price received for meat . . Average price received for by-products This leaves for expenses and profit 8.61 Of which the profit per steer was .

There are many other interesting and instructive facts, and figures in the Year Book.

We want to send our 1918 Year Book, to anyone, anywhere - free for the asking. Address Swift & Company, Union Stock Yards, Chicago.

TO CLEAN CEMETERY

A movemest is on foot to em ploy a man to clean up our cemetery and keep it clean. It is suggested that this be done by private subscription-as many as can donate \$1.00 per year, or some other sum, for that purpose.

This is a work that should be looked after, at all times, and it is a shame to neglect it.

Want someone volunteer right away to do this work, for pay. All wishing to donate please Hedley. Mrs. S. L. Adamson.

leased, we are told, in the T. R. men, and the following voted Moreman and B. L. Kinsey fam "Aye:" A. A. Teel, B. W. More-

There have been a few cases in the country, and may yet be a 1918, by few. We have learned of none

All cases are of the mildest form, and are now strictly quarantined. There seems to be no cause for alarm. In fact, if our efforts some weeks ago to ascertain the true state of affairs had met with the attention they deserved, the incident would have been closed long ago.

MRS. BARNETT DEAD

Late Tuesday evening Hedley people were shocked and grieved to learn that Mrs. M. O. Barnett had died at 7 o'clock in a sanitarium at Childress.

The remains were brought to Hedley that night, the funeral and burial taking place next day. A more extended notice will

appear in next week's paper. SERVICE POSTPONED

The dedication service that was to have been held at the Baptist Church next Sunday has been postponed indefinitely on account of the small pox scare.
