Simplify House Work In Wartime

COLLEGE STATION.—In wartime, the burden of increased work and irregular hours necessitate the simplifying of home furnishings. This will reduce the fatigue of the home worker and give her added time to work in the fields or to devote to volunteer war work, says Mrs. Bernice Claytor, specialist in home improvement for the A. and M. College Extension Service.

German Prisoners Show High Morale

The German people's determination and utter belief that they will win this war cannot be underestimated, Major Lawrence M. Brooke, Air Force pilot, revealed when he returned to his home in Mission this week. Major Brooke, who was recently awarded the Air Medal for meritorious achievement while participating in long-range ocean patrol flights, has had extensive contacts with German prisoners during the time before he returned to the United States after having served more than a year in the Caribbean area.

Furnishings which are necessary and which add to the comfort of the family should be given "priority" by the homemaker. If these are attractive and colorful, the home will be inviting and interesting, the specialist says. She suggests keeping window treatments simple, especially in the summer. Either, curtains or draperies used alone will require less care than both.

The prisoners reflect their perfect training as German soldiers and their faith in the German machine and its eventual victory, Major Brooke said. A surprising phase of their attitude is that they disclaim Hitler's importance as the guiding post of their country. Many of the prisoners disavowed the dependence of the German people on Hitler, saying there were at least ten other leaders who could take Hitler's place.

Dry Feed Needed With Pastures

Green pastures are going to be more necessary to the successful wintering of dairy and beef cattle this year than ever before, says E. R. Eudaly of the A. and M. College Extension Service. Wheat, oats and barley pastures being high in protein are the best means available for stretching the limited supplies of protein-rich meal and cake which cattlemen feed normally.

Use Protein Most Effectively

Since the most effective conservation of limited protein supplies ultimately must be left with the producer, it is important that protein concentrate feeds in their unmixed form be available at all times to ranchers and farmers. Guides to efficient use of protein feeds issued by the A. and M. College Extension Service point out that any individual stockman's need for protein concentrates will depend on the kind of livestock being produced, the amount and condition of available pasture and roughage, and the amount and type of home or locally grown grain available.

Test Anti-Freeze Before Re-using

Owners and operators of all types of motor vehicles who plan to use again this winter anti-freeze saved over from last winter are urged by the Office of Defense Transportation to have the liquid tested before putting it into the radiator to make certain that it is not of a harmful oil or salt (corrosive) type, that its anti-freeze strength is not impaired, and that it contains sufficient acid and rust inhibitor.

Along with green grazing cattle should be fed some high carbonaceous roughage such as Johnson grass hay, sudan hay, cane hay or grain sorghum bundles. Green pasture at its peak is about 80 per cent water and deficient in carbohydrates. Cattle must have more than 40 per cent carbohydrates and tender green pastures have only 30, Eudaly says. As a consequence, cows on pasture alone sometimes become ill. An average-size Jersey needs about five pounds of additional dry matter and larger animals require the equivalent of about one-half pound per hundred of their weight in order to maintain good health and prevent scours.

And, in any event, the producer should use protein feeds only as they are necessary to meet the basic requirements of digestible protein according to feed standards in common use, livestock specialists say. Present and probable future shortages of protein concentrates will not permit their use freely as a source of energy. To aid farmers and ranchmen in the best possible use of protein feeds, the Extension Service has issued four free printed leaflets related to the feeding of beef cattle, sheep and goats, dairy cattle, hogs, and poultry. These are available from county agriculture agents throughout the state.

W. J. Cummings, Chief of the Vehicle Maintenance Division of ODT's Division of Motor Transport, points out that anti-freezes of the deleterious salt or oil type should not be used or re-used; if saved over from last winter they should be discarded. With the addition of acid and rust inhibitor as needed, permanent type anti-freezes (the ethylene-glycol type) can be re-used safely as long as they have the required anti-freeze strength. They can be easily tested with a standard tester and if found weak in active anti-freeze, ethylene-glycol to give the required anti-freeze strength should be added.

Texans Meet War Crisis In Food

That four-letter word "food" means a lot more to the average person than it did two years ago. Food specialists of the A. and M. College Extension Service cite numerous instances to prove that the masses of people have changed their attitudes and actions because of war-time conditions.

Since time and use expend the strength of acid and rust inhibitors in permanent type anti-freezes, fresh inhibitor should be added if the paper inserted in the solution turns pink or red, or if the solution looks rusty. This can be checked by allowing a sample of the solution to stand overnight in a clear glass container. If the solution is suitable for use, it will clear up practically water-white, or with at least a trace of the original solution's color. Acid and rust inhibitor does not increase anti-freeze strength.

These conditions include increased demands for food, effects of the national nutrition program, rationing of many foods and scarcity and poor distribution of other, unfavorable relationships between production costs and market prices, relatively high retail prices of food, along with educational programs.

Cummings emphasized that in adding new anti-freeze to any type of used anti-freeze, the motorist should not mix alcohol and ethylene-glycol, since mixtures of these cannot be correctly tested with standard anti-freeze testers. He added that wherever possible it is advisable, when adding inhibitor or active anti-freeze, to use new materials of the same brand as the original and to follow carefully the manufacturer's instructions on the container.

These factors have combined to increase substantially the families planting Victory gardens, the food specialists say. About 90 per cent of the farms and ranches and 50 per cent of the village, town and city homes in Texas benefitted from gardening this year.

Prevent Yellow Leaves On Shrubs

COLLEGE STATION.—Yellowing of the leaves of shrubs, rosebushes, shade trees, peach trees and other plants in spring and summer is preventable.

Another result has been the increase in poultry numbers by about one-third. Many village, town, and city families now have small backyard poultry flocks. Further expansion seems inadvisable in view of the current feed shortage.

Generally, says Sadie Hatfield of the A. and M. College Extension Service, addition of copperas and sulphur to the soil at the rate of about one pound per large shrub or small tree corrects the trouble. Sometimes, too, fertilizers are mixed with the soil at the same time. But as wartime conditions limit the availability of these materials, Miss Hatfield who is the specialist in landscape gardening, suggests other effective means of control.

A short fruit crop created a strong demand for fruits this year, with an accompanying increase in the cooperative buying of fruits. County home demonstration agents in 42 counties have reported that 6,292 families canned about 136,000 pints of pineapple products worth \$27,000 in money and more than two and one-half million blue ration points. A gigantic promotional and educational program on safe methods of food preservation is expected to result in the conservation of more than 100 million containers of food in Texas during 1943.

A four or five inch vegetable mulch applied to shrubs for the next few weeks will help to protect their roots from heat, cold and drying winds. Because it conserves moisture, a mulch reduces the amount of water needed by plants. It should be applied several inches thick over an area of several square feet about the trunk of the plant, where it will be gradually worked into the ground.

More Terraces For Texas

Because farmers need to use every practice that has been proved to conserve soil fertility and increase farm production, B. F. Vance, state AAA administrative officer, is asking county AAA forces to cooperate with county agents, soil conservation service technicians, and local vocational teachers, in organizing terracing programs in all of the hill counties of the State.

The materials for mulching plants may consist of compost, grass cuttings, straw, or almost any other kind of decaying plant substance. Grass clippings furnish nitrogen and other plant food. Also, in decaying they will help to acidify the soil and release iron for the plants.

Under the 1943 AAA farm program farmers can earn 80 cents per 100 linear feet of standard terrace established. Last year Texas farmers built 109,927,000 feet of approved terraces to conserve soil and moisture and earned \$824,407 in payments for carrying out this practice, Mr. Vance said. The goal for 1943 is 150,000,000 feet.

Miss Hatfield says that yellowing of leaves in Texas frequently indicates a lack of iron, although it might be lack of nitrogen or other elements. Most Texas soils have ample iron but it is combined with other minerals and not available for plant use. But as soon as the soil is acidified the iron is released for plant roots to take up. Iron deficiency is especially noticeable in limestone regions, blacklands and other areas containing an abundance of lime. However, ceniz jaujullo and other plants native to west and southwest Texas require alkaline or lime soils and to make them acid would spoil the health and appearance of these plants.

Soil conservationists say the correct construction of terraces with proper outlets is one of the first and most important steps to take to prevent erosion and to conserve soil and moisture on cultivated rolling lands. Terraces serve to collect and retard the flow of water off the land. The grade of the terrace causes the water to move more slowly, giving it more time to soak into the soil.

Under the county AAA committee for this service, Mr. Vance said. In counties where terracing has been approved as conservation service, local farmers can get terrace lines run and terraces constructed and have the cost deducted from the soil-building payments they earn, Mr. Vance stated.

Discovery From Panhandle Vital In Dental Work

CHICAGO.—Discovery of a resistant that makes humans immune to dental decay was reported recently in the Journal of the American Dental Association by Dr. S. G. Harootian, D. M. D., of Worcester, Mass. He said a "striking" decrease in caries (dental decay) was noted in patients at the Worcester state hospital who were given flour made from the bones of beef animals, which contain great quantities of calcium, phosphorus and flourine. The experiment lasted nine months.

Use of the bone flour, Dr. Harootian said, resulted from an investigation made in Deaf Smith county, Texas, where the population was found to have a low incidence of caries.

"It was found that long-time residents of this district were free from decaying of the teeth," said Dr. Harootian. "It was further noted that people who had moved into this area from other parts of the country soon experienced an arrest of any caries that they might have had, and thereafter were immune to caries."

Investigators seeking the reason for the high resistance to dental decay found Deaf Smith county, situated on a high level plain, had a top soil of dark sandy loam overlying a clay stratum which contained a high percentage of assimilable calcium and phosphate, Dr. Harootian said.

"Correspondingly," he added, "The vegetation growing on this soil showed a high percentage of these mineral constituents. As a result, the meat and vegetable

products grown in this district could be expected to contain a relative abundance of calcium and phosphorus."

The investigation also disclosed that the drinking water of the county contained a high percentage of the two elements in addition to flourine.

Believing that the calcium, phosphorus and flourine were responsible for arrest of dental decay, Dr. Harootian said he learned there was available in almost unlimited quantities flour made from the bones of beef animals.

Panhandle Makes Blockbuster Bomb

Some idea of the increasing importance of the Panhandle's part in the war program is revealed by the fact that more Army Ordnance bombs are now being dropped on Hitler's European Fortress in one raid than were dropped during the entire month of June, according to Lt. Colonel R. M. Bacher, commanding Pantex, the Government-owned bomb loading plant near Amarillo.

"The ammunition record of the Eighth Air Forces in Great Britain," he said, "tells an amazing story. It is typical of Ordnance-Air Corps co-operation. We pass the blockbuster. Our airmen unload them on Axis industrial plants and naval installations."

The record shows that one year ago, in August, 1942, the Eighth Air Force dropped 340,000 pounds of bombs on Nazi installations. In 1942, his total was more than doubled—762,000 pounds. In April, 1943, the figure was 1,994,000 pounds. For the period June-July 4, the Eighth Air Force called on Army Ordnance for 5,024,000 pounds of bombs.

However, in one 45-minute raid on Hamburg, Flying Fortresses unloaded 5,152,000 pounds of assorted blockbusters.

"Few people," Lt. Col. Bacher said, "have any conception of the magnitude of 65 million pounds of high explosives. Yet this total would make available a month's supply of coal in the United States. It represents approximately a year's supply of explosives used in the blasting of the route of the Panama Canal."

Army Ordnance not only supplies the bombs and blockbusters to the Eighth Air Forces but to 20 other United States Air Forces as well.

Rationing . . . At A Glance

GASOLINE — In 17 states of eastern shortage area A-6 coupons are now valid. In states outside the eastern shortage area A-7 coupons are valid through September 21. B and C coupon expire according to dates on individual books. All gasoline coupons in the possession of car owners must be endorsed with the owner's license number and state of registration.

SUGAR—Stamp No. 14 good for 5 lbs. through October 31. Stamps Nos. 15 and 16 are good through October 31 for 5 lbs., each for home canning purposes. Housewives may apply to their local ration boards for more if necessary.

COFFEE—Ration stamps no longer required.

SHOES—Stamp No. 18 (1 pair) is valid through October 31.

STOVES—Consumer purchases of rationed stoves must be made with a certificate obtained at local war price and rationing boards.

MEAT, Etc.—Red stamps X and Y valid though October 2. Z becomes valid Sept. 5, and remains valid through October 2.

PROCESSED FOODS — Blue Stamps R, S and T remain valid through September 20. U, V and W become valid September 1 and remain valid through October 20.

Wartime Use Of Income Vital To Entire Family

COLLEGE STATION.—How a family uses its income in peacetime is important, but in war-time it is a matter of national concern. Many families have discovered this in the past few days as they figured their income tax declarations, says Louise Bryant, specialist in home management for the A. and M. College Extension Service.

A family's war-time economy necessarily must be based on saving more and spending less. Miss Bryant explains that is because the family must pay higher taxes, invest regularly in war bonds and stamps, and pay off financial obligations as soon as possible. This kind of a program is worthwhile because it helps stretch limited civilian supplies and ward off inflation.

If a family has not already made a war-time spendings and savings plan, experience in recent days should prove this a good idea. In making the plan, Miss Bryant suggests that the entire family be brought in on the planning. That means small children, too, for they should gain experience in saving and spending wisely.

The first step in making such a plan is to figure out the family's gross income. Farm families may feel their income is pretty uncertain, but even a conservative estimate will help. Then the second step is to figure out the family's essential war-time needs. Even then it will be necessary to check the plan and change it to make it workable. Families can get help and ample work sheets from their county home demonstration agents, Miss Bryant says.

P.T.A. Meeting

The Parent-Teacher Association met Thursday, Sept. 16, in the first meeting of the year. The president, Mrs. Leon Reeves, presided at the business meeting. Some of the needs of the school were attended to, and the PTA voted to cooperate with the local clubs in the bond drive. Miss Garrison resigned as Secretary, and Mrs. Ross Adamson was elected to fill the place. Mrs. Mason was elected Vice-President.

At the conclusion of the business meeting the Red Cross workers gave some interesting talks. The next meeting will be the 3rd Thursday in October.

Beginning Sunday, Sept. 26, we will close the Ice House at 1:00 o'clock every Sunday.—Ross Adamson.

WANTED—Lady to clean house once each week. Mrs. Mabel Jones.

Mrs. Rhea Stotts and son, David, and Mrs. J. A. Lemmon visited in Giles Friday.

Dr. D. H. Cox and family have returned from a trip to Kansas City and Columbia, Mo.

Mr. and Mrs. Walter McCracken and I. N. Reeves have moved to the Kinslow place from Hall County.

Mrs. S. Q. Workman of Bonham is visiting her brother, J. F. Randall, and family.

J. F. Randall went to Amarillo Monday.

Mrs. M. W. Mosley has returned from a visit to Cisco.

Jiggs Mosley of Cisco stopped over Monday night en route to Borger.

Mr. and Mrs. W. H. Jones and Mrs. Studie Jones went to Amarillo Tuesday.

Dorothy Lowe of Houston is visiting here.

Mrs. S. I. Lee of Robstown spent last week in the A. P. Todd home.

Rev. Byron Todd and family and Mr. and Mrs. Lee Todd and family of Happy visited A. P. Todd and family Thursday.

T. C. Todd and family of Amarillo spent Sunday here.

Mary Ann and Norma Jean Todd of Amarillo are visiting here this week.

Mrs. Paul Smith and son of Lakeview visited Mrs. Lela Hemelstrand last week.

Mrs. J. R. Ayers of Clarendon and Mrs. J. W. Welch of Memphis are visiting G. F. Frost and family.

Mr. and Mrs. C. C. Stanford and A. R. Marshall spent last week end at Hereford.

Jack Marshall is now employed at Borger.

Charles Rains and B. W. Mason made a business trip to Amarillo Tuesday.
