

# The Hedley Informer

VOL. 46

HEDLEY, DONLEY COUNTY, TEXAS, APR. 27, 1956

NO. 26

## First Baptist Church Huckabees Write

Next Sunday, April 29, is to be an important day in our church. There is to be an all day program with an invitation to all members to come bring a basket lunch and spend the day. The afternoon will be given to an ordination service in which three men will be ordained as deacons. Everyone is invited to attend. The dinner is to be spread in an old fashioned way in the fellowship hall. There will be preaching, fellowship, and a good time to be long remembered.

## NFLA News

Rayburn L. Smith, secretary-treasurer of the National Farm Loan Association in Clarendon, announces that the Federal Land Bank of Houston is starting on its 40th year of operations this month. Since organization in 1917 the bank has made 145,000 long term mortgage loans for more than \$625 million to farmers and ranchers in Texas. The Land Bank is owned entirely by 13 national farm loan associations over the state. All loans are made through these associations which are fully owned by their more than 36,000 member borrowers.

In 1955 the Land Bank loaned more money than in any other year of its history, according to Sterling C. Evans, bank president when it loaned over 58 million dollars. Present volume of loans outstanding exceeds \$172 million. Loans are made for a wide variety of agricultural purposes, including the purchase of land, making farm and ranch improvements, irrigation, refinancing and for other purposes.

## Baseball News

The Caprock League baseball season will open Sunday, with Hedley meeting Groom here at 3 p.m. Come out and give them your support.

## Attend Funeral

C. E. Johnson and R. H. Couch attended funeral services in Amarillo Tuesday for Oscar Rutherford, 63, who passed away there Monday.

Mr. Rutherford, a retired farmer and business man, was a brother of the late Mrs. C. E. Johnson.

In these early weeks of our forced separation from you good Hedley people, we have much to be thankful for our nearly two years' life among you. We had hundreds of people on our side then, and still have, as we tried to serve in Christ's name. We hope to tell you all about it before too long, when we see you face to face. We are grateful to the Hedley Informer for this means of communication.

Neither of us are able to do much personal letter writing just now. But we do desire to thank you all for the great boost you are giving us with your letters, cards, gifts, financial help, your love and prayers as well as visits and telephone calls and Easter greetings from many of you. This makes us want to live a long time. They are medicine for both body and soul. You are a wonderful people. Our work with you has been one of the brightest spots in our lives. We are most grateful for the way the church is still carrying on.

Your understanding of our problem, which arose so suddenly, is even greater than we could have expected. May our good Father bless you all abundantly for every expression of encouragement and good will.

May God guide and bless you until we meet again.

R. N. and Mrs. Huckabee

**Soil Conservation News**

The use of grasses on land subject to extensive wind or water erosion is the most practical method of conserving such soils. Permanent tame pastures would be profitable on many of our farms. They should be used on soils that are too steep, rocky or eroded for cultivation, also on land subject to frequent overflow and on soils subject to blowing to the extent that they can't be safely farmed. Grass plantings may also be used on all land to increase pasture acreage and livestock numbers.

The objective in establishing permanent pastures is, of course, to obtain as much forage per acre as possible throughout the year, and a mixture of grasses will do this best. Mixtures should be used that: 1. Grow the best for physical conditions of site and produce most forage. 2. Will last the longest under grazing and be more permanent. 3. Will grow well together. 4. Are adapted to the climate and rainfall.

Using this as a guide, it seems

best to use a mixture of our native perennial short, mid and tall grasses on mixed or sandy soils. These could include sand and little bluestem, switchgrass, Indian-grass, sideoats grama, blue grama, and sandlove grass.

A cover crop of sorghums or sudan should be grown previous to grass planting. The sorghum stubble left unplowed serves as a protection for grass seedlings. This mixture should be planted in February, March, or April.

The Donley Soil Conservation District and the Soil Conservation Service have available technical assistance and specialized equipment to aid in pasture planning, as well as in other conservation problems.
