**"... I'm Against Farm Legislation"**

PLOWING 'EM UNDER--Texas' new junior senator, John Tower, who was elected Saturday, says he is against present administration's farm program. This cartoon gives a concept of what Tower's ideas in regard to farm legislation would do to farmers in this area. Cartoon by Dean McCallum.

**Party Honors Mrs. Trimble**

Mrs. C. E. Trimble was honored with a birthday party Tuesday evening by members of 39ers Birthday club. Following an evening of bowling the group returned to the home of Mrs. A. M. Wilson for a buffet dinner.

**Bowling Team Entertained**

Mr. and Mrs. Paul Jones entertained members of their bowling team and their wives Thursday evening at their home. Following the supper the group went bowling. Attending were Mr. and Mrs. Howard Looney, Mr. and Mrs. Dolph Moten and Mat, Mr. and Mrs. Dean McCallum, Larry and Nancy, Robert Lee Hopingardner and Randy Jones.

**Bill Calaway Celebrates B'day**

Mrs. Robert Calaway hosted a birthday party for her grandson, Bill Calaway, on his fifth birthday May 19 in her home. Bill is son of Mr. and Mrs. Bobby Calaway. Following outdoor games, the group was served refreshments of cake and ice cream. Those attending were Cindy Read, Cathy Sudderth, Rhonda Rhodes, Terry Sherrill, Becky Brock, Pam Wilson, Cathie and Christie Trimble, Julie Calaway, and Steve Lesley and Monty Cassidy of Farwell. Adults present were Mrs. Robert Read, Mrs. Jay Sherrill, Mrs. C. E. Trimble, Mrs. Harvey Lesley, Mrs. Paul Jones and Mrs. Bobby Calaway.

**Girl Born To McPhearsons**

Congratulations to Mr. and Mrs. Travis McPhearson on the birth of a 7 pound 12 ounce baby girl born Tuesday, May 16 at West Plains Hospital in Muleshoe. Debbie Diane is the name chosen for the infant. Grandparents are Mr. and Mrs. Isaac Hawkins of Sudan and Mr. and Mrs. Dave Taylor of Ruidoso, N.M.

# THE HIGH PLAINS FARM AND HOME

## Bindweed Is Topic At Monday Meeting

Bindweed, long a menace to most every High Plains farmer, was the main topic of discussion Monday night when about 35 farmers attended a meeting on weed control at Friona State Bank.

Reports on what had been done in the past to control the weed in Parmer and Hale Counties, and discussions were heard on what is currently being done, and what can be done in the future, to control the twining herb.

Archie G. Martin, supervisor of the Hale County Weed Control District, Plainview, was the featured speaker for the program. He discussed how the weed control district was formed and what had been accomplished by its program in Hale County.

The weed control district has two main functions, Martin said. One is to educate the farmer on the need for weed control and the other is to conduct field work on the actual control of noxious weeds.

Hale County farmers voted on, and approved, the formation of the weed control district in 1957, following the passage of a House Bill in 1955 which permitted 36 counties in Texas to vote on the measure which would "put teeth" in a weed control program.

When the farmers okayed formation of the weed district, a three-cent per acre tax was levied for the purpose of carrying on the program.

The weed control district hired personnel and purchased equipment for the purpose of carrying on the program to eliminate noxious weeds, which in Hale County is mostly bindweed, Martin explained.

The Hale County supervisor showed movies on some of the work of the weed control district and pointed out what could be accomplished by such a program.

He said that the actual field-work being done by the district

on weed control was of importance, but of even more importance was the educational program which made farmers aware of the need to control the weed and what steps they could take to rid their farms of it.

The district assists farmers with carrying out their own individual weed control programs, and also conducts weed eradication measures in badly-infested areas. All of the work of the district is financed by the three-cent per acre tax levy.

In Parmer County, no attempt has ever been made to call an election for a weed control district, but a volunteer weed program has been carried on for the past seven years.

J. T. Jones, chairman of the Parmer County Weed Control Committee, was moderator for Monday's meeting, and Joe Jones, Parmer County agent, gave a report on the history and accomplishments of the program.

During the seven years the weed control committee has functioned, Jones explained, "we have tried to incorporate the same things that Hale County has done in our program."

He pointed out that farmers, local governmental agencies, the Santa Fe Railroad, the Highway department, and other groups have in the past assisted with the program, and are presently doing so.

"Much has been done, but there is still a lot left," Jones said. The weed committee has tried to carry on an educational program to inform the people on what should be done, the county agent added.

Several farmers gave testimonials on the accomplishments in Parmer County, pointing out how much better shape this county was in than adjacent counties.

It was pointed out, however that there was still a lot of bindweed infestation and more measures needed to be taken. Ronald E. Mock, Santa Fe

representative from Amarillo, explained how the railroad was helping to control the weed. Whenever bindweed is located on Santa Fe right-of-way, the railroad undertakes the eradication of the weed.

The railroad buys the herbicides and also applies it to the infested areas. Mock is the railroad representative who has been treating the bindweed in Parmer County as well as other counties in this area.

Parmer County Judge Loyde Brewer explained how the commissioners court would pay for the herbicides on county road right-of-ways, providing the farmer would put it on.

Prentice Mills, Parmer County ASC office manager, explained the ASC cost-sharing program. Under the program, the government pays half of the cost of treating bindweed on farms, provided it isn't over \$75 per acre, Mills said.

A report was also heard on work which had been carried on by the city commissions of Farwell and Friona where bindweed was found in town, and Roy Crawford, vocational ag teacher at Bovina, explained a weed control program which was carried on in his vocational ag department.

Through the vocational ag program, the students are informed as to what bindweed is, what it will do to farmland, and what can be done to control it, Crawford said.

A. L. Black, chairman of the Parmer Soil Conservation District, explained the function of the SCS in regard to weed control, and pointed out that there were five machines available in the county for weed control measures.

Jack Patterson told of a community program which is planned in the near future for bindweed eradication in the Rhea community.

The purpose of the meeting was to bring farmers and other county residents up to date on what had been done on weed control and to stimulate more interest in control measures.

There was no discussion at the meeting on whether the calling of an election for forming a weed control district would be desirable in Parmer County, and as one weed committee member said after the meeting, "A three-cent tax levy isn't much, but we'd like to avoid it if possible."

The main function of the county weed committee has been to enlist voluntary efforts on the part of farmers, as well as city residents, and local government.

It was evident from the reports of the various individuals at the meeting that the weed control program had been successful to a great extent, but that more effort was needed from all concerned.

PARMER COUNTY'S REPRESENTATIVES to the Texas 4-H Roundup, scheduled next week at Texas A&M College, are Miss Judy Billingsley, Bruce Billingsley, and Gary Foster. The three 4-H Club members won the right to attend the roundup by winning county and district 4-H contests. Their expenses to the roundup are being paid by the Parmer County Farm Bureau.

## WITH THE COUNTY AGENT

JOE JONES

The 1961 cotton crop is off to a good start. This does not mean that we don't have THRIP and seedling disease present, in every field. In checking young plants last week, I found a lot of THRIP in the terminal buds of the small plants. You need to take your pocket knife and open up the small terminal and check for THRIP in the young rolled up leaf.

Too many of you don't check close enough to find THRIP. Cotton that looks good at 20 miles per hour doesn't look so good when you walk out in it and start counting the true leaves (not the cotyledon leaves), and checking their condition. Most all true leaves show some THRIP damage and some have been damaged severely. These will never develop into a leaf that can manufacture much plant food for the young plant to use in making further growth.

Seedling diseases are present in all fields I have looked at, and nothing to compare with last year. We always have seedling disease in our young cotton and, of course, aeration of the soil and hot weather usually bring it right out, but a few days to a few weeks is lost depending on the severity of the disease.

Let me caution you about laying all your trouble on seedling disease, THRIP, or sand. It can be a combination of all or either one. It is just good business to get out in your field and look for THRIP and dig up a few young plants and take a look at the root system. You must remember, time lost now cuts the growing season, just the same as does the frost date.

You will be interested to know that in Texas 45,274 farmers have signed up 41.5% of their base acreage in the Feed Grains Program. This will result in a substantial feed grains reduction should most of these farmers carry out their intention to divert. The extra one and a half percent above forty comes in from the small farmers who are diverting more than forty percent of their acreage.

The paper has shown interest in running a series of informational stories on civil defense. You will be interested in these I know, so get ready, for Richard will shoot the works when he gets in full swing.

## NOTICE TRI-COUNTY AUCTION

At 1:30 p.m.

In Friona, Texas, A Public Auction Will Be Held For The Benefit of People Wishing To Sell:

- HOUSEHOLD GOODS
- FARM EQUIPMENT
- ANYTHING OF VALUE

You May Consign Anytime During The Week At Friona Blacksmith West On Highway 60.

This Is A Weekly Sale  
BILL FLIPPIN JR., Auctioneer

Plan Now To Attend

## Three To Attend 4-H Roundup

Three Parmer County 4-H Club members plan to leave Monday for Texas A&M College at College Station where they will attend the annual Texas 4-H Roundup.

Attending from here will be Judy Billingsley and Bruce Billingsley, from Oklahoma Lane, and Gary Foster, of Lazbuddie.

During the three day roundup, Tuesday, Wednesday, and Thursday, they will attend various programs and meetings and participate in state contests.

Both Judy and Bruce, children of Mr. and Mrs. Leon Billingsley, will compete in poultry marketing contests. Gary, the son of Mr. and Mrs. Nelson

Foster, will participate in tractor driving.

All three of Parmer County delegates are members of the Junior Leadership Club. They won the right to enter the state contests by winning county and district contests earlier in the year.

The annual 4-H Roundup is the highlight of a year's work for 4-H club members under the leadership and guidance of volunteer adult leaders and county extension agents.

State contest eliminations serve as further development of girls and boys in achieving the objectives of their particular demonstration.

## Gas Users' Ball Rolling

The newly-formed Parmer County Irrigation Gas Users Association continues to gain steam.

In a county-wide election, four directors have been named. They are Vernon Symcox, Farwell; Marion Carson, Bovina; Hap Fairchild, Friona; and Fred Burch, Lazbuddie.

These men represent the four commissioners' precincts in the county. They will serve with association officers, who are Bruce Parr, president; Gilbert Kaltwasser, vice-president; and Carl Schlenker, secretary-treasurer.

Parr reports over 700 wells now in the organization, and expressed satisfaction with the growth and progress of the group in the county. A mem-

bership drive is still underway.

The local group is affiliated with the Plains Gas Users Association, a region-wide organization of similar description. The groups are working together to obtain the "lowest price possible for fuel to power irrigation wells." This includes natural gas and all other power sources, officers point out.

Parr says that for the first time irrigation farmers now have a voice that can be effective in working toward cheaper fuel to run irrigation engines.

"We have already been put on notice that another increase in the price of natural gas may be in store in about three years," he says.

# How To Install And Operate A Recharge Well

There are 37,000 playa lakes on the High Plains but only 170 recharge wells are reported to be in operation. Many of these recharge wells have been reported as failures.

Cave-ins, air locking of the pump and reduced pumping of the well due to clogging of the underground sands are the most common reasons for recharge failure. All three can be prevented by the proper installation and operation of a recharge well.

## INSTALLATION

Four things are very necessary in the installation of a recharge well. These are: (1) a concrete packer around the top 30 feet of casing, (2) perforate the casing beginning at the static water level, (3) install a vent pipe through the concrete packer and (4) the installation of an intake control valve.

Some recharge wells are ruined by surface cave-ins. These are caused by water seeping in around the base of the pump and recharging outside the casing.

If this recharging outside the casing continues, the seepage channel enlarges and finally causes the well to cave-in. Recharging faster than the sands can absorb water results in water rising too close to the surface and this can contribute to cave-ins.

A concrete packer 30 to 35 feet deep and approximately six to eight inches thick around the top of the casing will prevent surface seepage and washing from beneath and reduce the danger of cave-ins. The well should be drilled with the top 30 to 35 feet approximately 12 inches greater in diameter than the casing.

This spacing is to allow for six inches of concrete outside the casing.

Many recharge wells will not pump and recharge at the same time. This is caused by an "air-lock" in the pump. Air is

carried down with the recharge water and cannot escape.

The falling water prevents this air from escaping back up the casing. Since the casing perforations are usually at the same level or below the casing, the air is held inside the casing.

When the pump is started this trapped air enters the pump bowls and causes an "air-lock" which prevents or reduces pumping of water. Excessive wear results, if the pump is operated under such conditions.

To prevent this "air-lock" the casing should be perforated beginning at the static water level so the air which is carried down can escape outside the casing above the pump pipe. A vent pipe must then be provided to permit the air to come to the ground surface and out into the atmosphere.

This vent pipe should be two to three inches in diameter and placed in the concrete packer when it is poured. It should extend at least one foot below the packer and a few inches above the top.

The vent pipe should be placed so it will not interfere with the pump base and be provided with a cover to keep out dirt and trash.

## OPERATION

The greatest hazard in recharging is clogging the underground formation so that the well will neither pump nor recharge water.

Pumping the well one to two hours during each 24 hours recharge period has prevented clogging. This pumping removes a large percent of the sediment which is carried into the well.

Surging (stopping the pump to permit the column of water in the pump to drop back into the well) every 15 minutes stirs the sediment and keeps it in suspension. This results in more sediment being removed during pumping. Where this pumping and surging procedure has been followed, there has been no reduction in pumping or recharging rates over a three-year period.

Controlling the recharge rate will also help to prevent clogging of the underground formation. If the recharge rate is lower than the pumping rate, the sediment will remain closer to the casing. As a result, more sediment will be recovered during the daily pumping procedure.

A valve should be installed

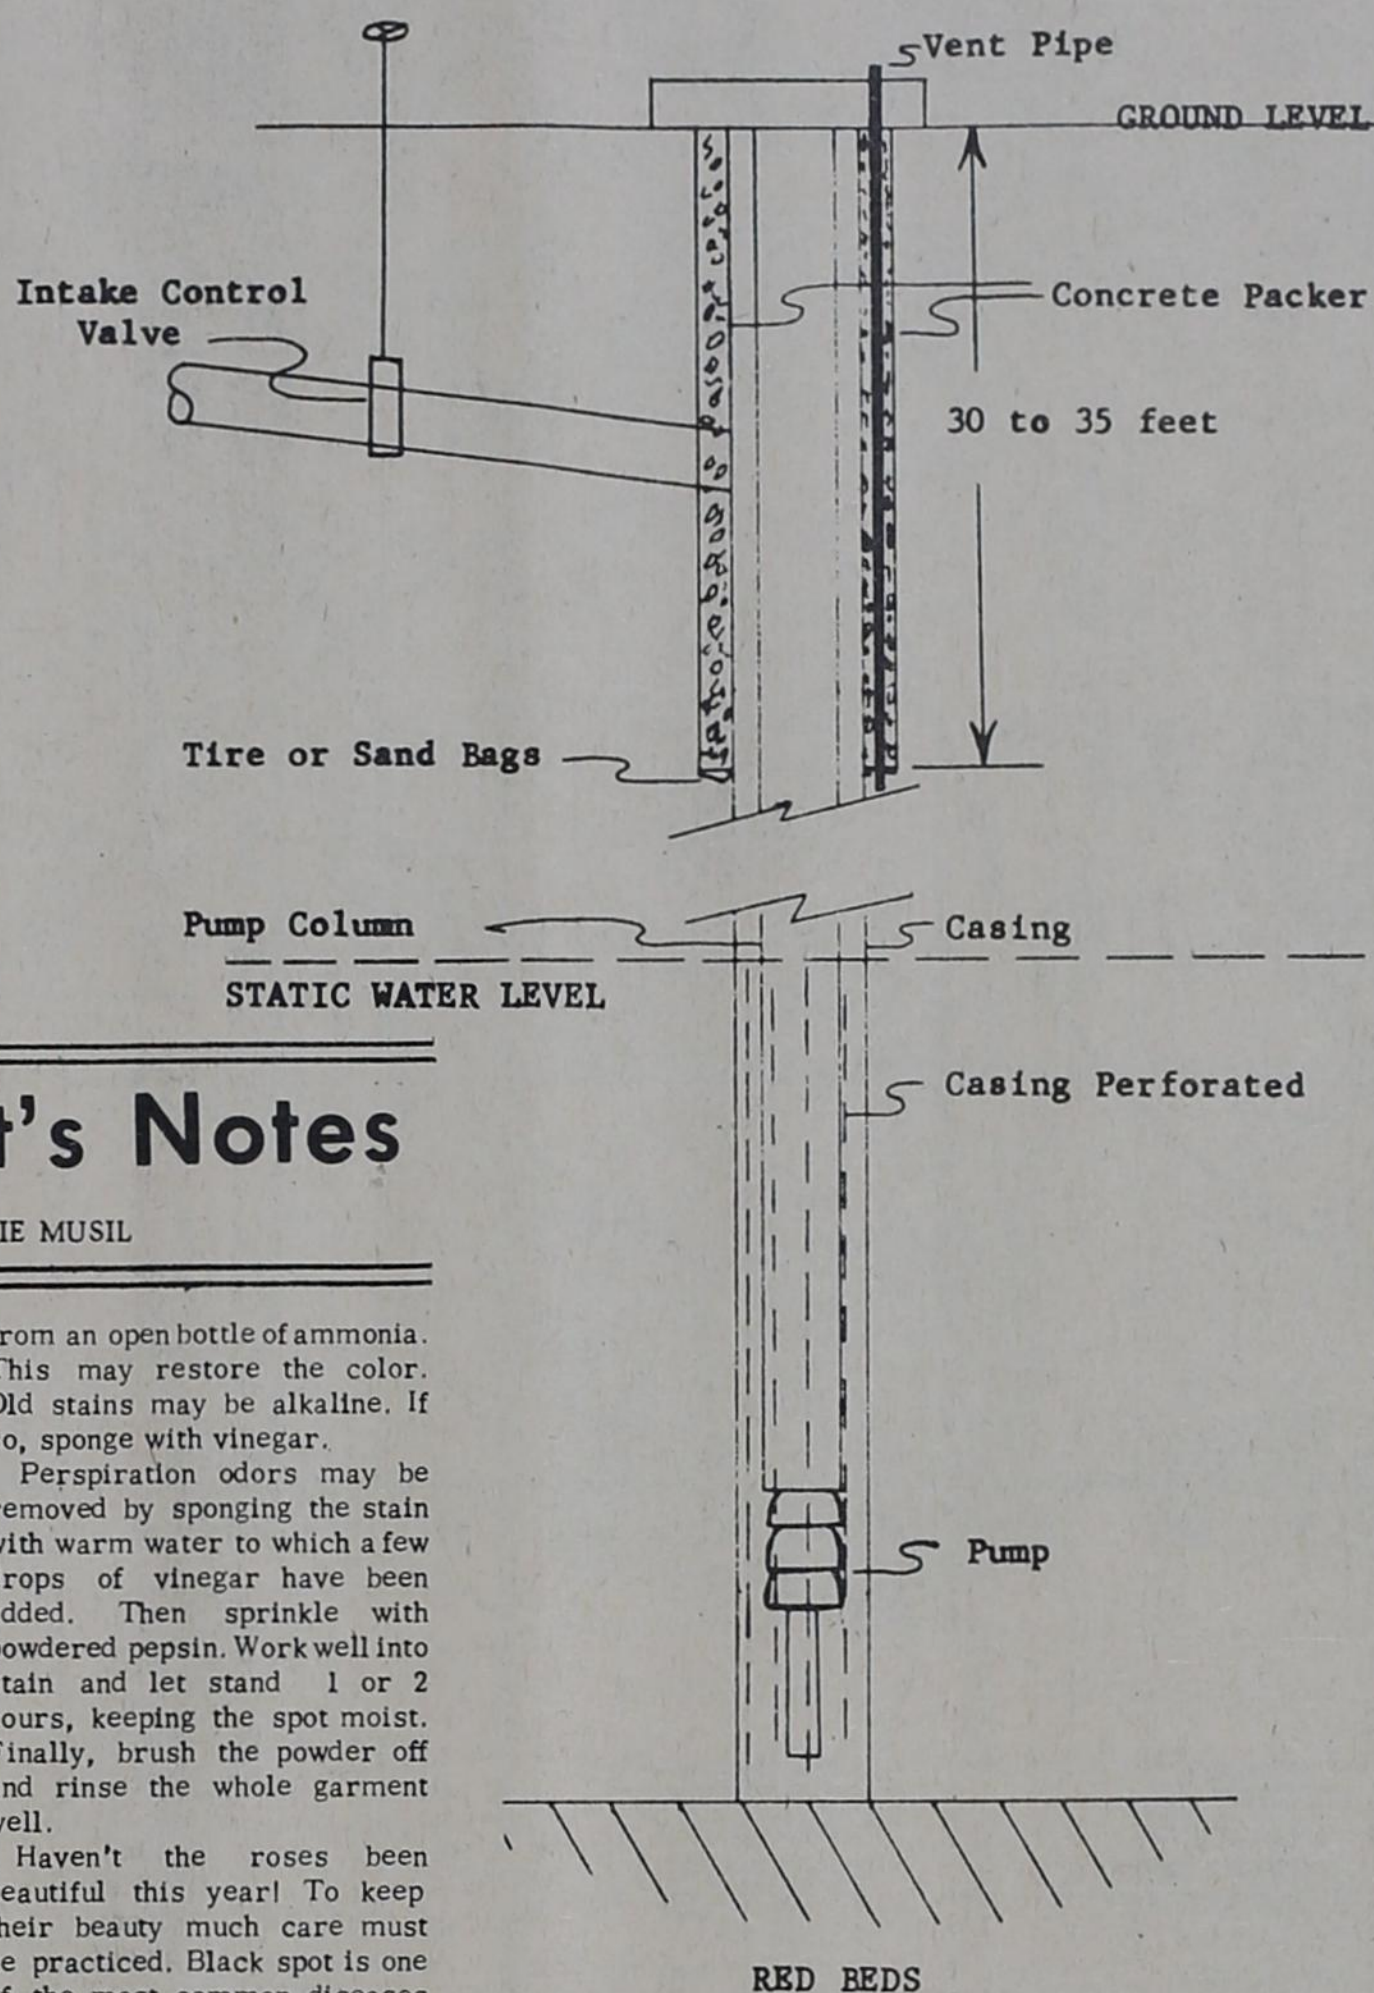

in the intake line between the well and the lake so that the rate of recharge can be controlled at all times.

Developing the well to remove mud and drillings will insure the formation is free of this material and prevent the sediment in the recharge water from stacking up against any such material in the immediate vicinity of the casing. This will also speed up water movement in the formation and make the sediment in the recharge water easier to reclaim.

Chlorinating or sanitizing the well is recommended. This will prevent bacterial growths and control contamination. Pure chlorine or chlorine producing substances can be used for this purpose.

Figure 1 shows a diagram of a properly installed recharge well. If the above instruction for installation and operation of a recharge well are followed, recharging of surplus surface water can be carried on successfully and can add greatly to our supply of underground water.

DIAGRAM OF A PROPERLY INSTALLED RECHARGE WELL

## HD Agent's Notes

BY MISS ETTIE MUSIL

With school out and summer activities in store you may have problems in trying to remove stain from clothing. Such stains as perspiration, grass, machine oil, grease, and fruits or berries are the most common during the summer months.

We have a very good bulletin available in the office on "Removing Stains From Clothing." If you would like to have a free copy of this bulletin do call or write me. Better get a copy now before you get the stains on your clothing.

One secret in removing stain is to take care of it immediately. First make certain you know what the stain is. Then classify your fabric whether it can be laundered. Then finally choose the proper stain remover. Wrong treatment of application can add to the damage of ruining valuable clothing.

Perspiration stains can be hard to remove. Normally this stain is acid and usually will wash out of washable fabric. But sometimes the color of the fabric is changed. If this happens dampen the stain with water and hold it over the fumes

from an open bottle of ammonia. This may restore the color. Old stains may be alkaline. If so, sponge with vinegar.

Perspiration odors may be removed by sponging the stain with warm water to which a few drops of vinegar have been added. Then sprinkle with powdered pepsin. Work well into stain and let stand 1 or 2 hours, keeping the spot moist. Finally, brush the powder off and rinse the whole garment well.

Haven't the roses been beautiful this year! To keep their beauty much care must be practiced. Black spot is one of the most common diseases of roses. In checking several rose bushes I have noticed that this disease is beginning to take over the roses.

The spots may occur on either side of the leaves. Usually the spots occur on the top surface of the leaves as large, roundish black spots with irregular or frayed margins of the design. Do not sprinkle water on leaves of roses when watering the bushes. Roses can be watered too often and cause root rot. Water the bushes well once each week.

Frequently the disease develops unnoticed on the soft twigs and branches of the bush. When severely infected, the leaves may turn yellow and drop off. This weakens the plants and makes them more susceptible to the dieback or canker disease, drought, or winter injury. Too, it also results in smaller flowers which are weak in color and fragrance.

Black spot can be controlled by spraying once a week with Dithane M-22, Manzate, or Phaltan. Time between sprays may be longer during periods of little rainfall. The addition of a spreader-sticker to the spray will insure better coverage. Both lower and upper sides of the leaves should be sprayed.

Captan, maneb, or zineb fungicides have been used effectively in the past, but the above mentioned fungicides are the latest research findings. You may combine insecticides and fungicides for one spraying in control of diseases and insects.

Sprays are recommended over dusting. Dusts generally give very poor control of black spot. Hose on sprayers or compressed air sprayers are generally good for applying the fungicides if only a few rose plants are involved.

For additional information on rose care, do ask us for a free copy of a publication "Roses for Texas."

Don't forget to vote for the man of your choice in the May 27 election.

NEWS FROM THE

**FARM BUREAU**  
BY RAYMOND EULER

There are only two kinds of parking nowadays -- illegal and no.

It appears that the bill extending time for claiming refunds on non-highway-used gasoline will become law. The extension will be from six months to one year and will simplify the forms necessary for claims. This way, you will be able to take care of this chore in the privacy of your home if you wish.

The bill providing penalties up to \$200 per day per animal running at large on public or private property was killed last week with the aid of Farm Bureau.

Farm Bureau leaders, including your president, Herman Gerles and others, sent telegrams to Austin opposing rumored possibility of taxation including farm machinery, feed, seed, etc., under HB 334 (2% general sales tax) last week. As a result, this possibility has apparently been nipped in the bud.

The Farm Bureau Weed Committee held a meeting in the community room of the Friona State Bank in Friona Monday night. This is written before a report could be had on the meeting, but representatives of the highway department, railroads, along with city mayors and county commissioners and others were expected to be in attendance for the purpose of expanding the bindweed eradication program. J. T. Jones is chairman of the committee.

The regular meeting of Farm Bureau Directors will be held in the Friona Office Monday night at eight thirty. You, as usual, are cordially invited to attend.

CONSIDER THIS: The getting of treasures by a lying tongue is a vanity tossed to and fro of them that seek death. Proverbs 21:6

To reply to a nasty remark with another nasty remark is like trying to remove dirt with mud. SPANISH PROVERBS

## Plainview Production Credit Association Nation's Largest

The Plainview Production Credit Association held its position as the nation's largest agricultural credit organization in 1960, among more than 500 PCAs serving all areas of the United States.

Olan Alexander, general manager of the Plainview PCA, announced that figures recently released by the Farm Credit Administration in Washington show that the Plainview association ranked first in total loan volume, first in member-owned capital stock, first in total net worth and third in loan outstanding on Dec. 31, 1960.

The Plainview association had capital stock totaling \$2,400,055, a net worth of \$2,994,358 and \$11,927,000 in loans outstanding at the close of business for 1960.

"We are extremely pleased at the high national ranking held by our association," Alexander commented. "However, size is only a reflection of the solid growth and progress our association has experienced in its 27-year history. We will always strive to provide complete agricultural credit services for our area's farmers and ranchers."

The Plainview Production Credit Association serves Farmer, Castro, Swisher, western Briscoe, Bailey, Lamb, Hale and Floyd counties. The central office is in Plainview with field offices in Dimmitt, Muleshoe, Littlefield, Floydada and Silverton, Friona and Tulla.

**THIS SEED OFFER BACKED UP BY CASH REFUND Plant-and-Compare GOLDEN ACRES TE77**

**READ DETAILS HERE AND SIGN UP NOW AT YOUR GOLDEN ACRES DEALER**

Golden Acres TE 77 is the latest development in hybrid grain sorghum for planting on irrigated land. It promises remarkable yields where adequate irrigation water and fertilizer are available.

The producers of TE 77 and dealers who sell it are backing their confidence in it with this special plant-and-compare offer:

If you have adequate irrigation water, plant TE 77.

It must compare with or out-yield any other variety of hybrid milo you plant or ONE-HALF of the purchase price of the TE 77 seed will be refunded IN CASH. No questions asked.

Sign up now at your Golden Acres dealer.

# When To Irrigate Cotton

The below illustration should serve as a guide to farmers in planning the irrigation of their cotton. As indicated by the chart, the period of peak water use begins with the first white bloom and continues through the bell development period. The chart shows the rate of water used from plant emergence to the opening of the first bell. According to the Texas Agricultural Extension Service, cotton should be irrigated just before the root zone of the soil no longer contains sufficient moisture to supply the needs of the plant for proper development. From a practical standpoint, the irrigator cannot wait until the soil moisture content reaches this point on the entire field. Irrigation should begin when about half the moisture in the root zone has been depleted. This will provide sufficient time to cover a large acreage before the available soil moisture on the last portion of the field has been depleted.

## Texas Ginners Oppose Farm Bill

A nine-point exception opposing the Omnibus Farm Bill was issued Monday by the Texas Cotton Ginners' Association.

The state-wide organization's board of directors detailed their opposition to the Kennedy administration proposal at a meeting in Dallas. Association president R. L. Massey of Pilot Point forwarded copies of the statement to Secretary of Agriculture Orville Freeman and members of the Texas Congressional delegation.

He explained that directors felt the bill as originally written was not in the best interest of cotton farmers.

The 1,200 member ginners organization—biggest in the nation—took these exceptions to the Omnibus Farm Bill which is currently pending before Congress:

1. The traditional method of law making must be protected through open hearings by Congress. Ginners opposed specifically the concept of the Secretary of Agriculture drawing up farm programs with "politically appointed" committees.
2. Any legislation which removes the minimum of 16,310,000 acres for cotton is unacceptable.
3. Any limitation on payments or supports is discriminatory and has no basis for fair and equitable participation by all farmers.
4. Any farm program should recognize the necessity for competitive prices and markets.
5. Farm programs should provide some protection for farmers in the form of supports.
6. Marketing orders are not workable for cotton. These federally operated orders are one of the key proposals in the Omnibus Farm Bill.
7. Cross-compliance in farm programs which would require cotton farmers to comply with regulations on all crops in order to participate in various other government programs is unfair.
8. Any program which does not take into consideration all segments of the cotton industry is unfair and unworkable.
9. Any quotas established in farm legislation should be in acres and not pounds or bales.

## The HAPPY HOMEMAKER

BY JUNE FLOYD

Our apologies this week go to everyone who wanted to try the recipe for the Chocolate Oatmeal Cake printed in this column last week. It seems that somewhere between the typewriter and the printed page one teaspoon of soda got lost. Thanks to everyone who called for this information.

If you clipped the recipe for future use and haven't yet discovered the error, just add 1 teaspoon soda to the list of ingredients. Not too many years

ago it was considered "old fashioned" for anyone to use soda in cakes. Not so any more. It seems that we've gone to the other extreme now and use soda in many cake recipes.

Another cake recipe that calls for soda is

### BANANA NUT CAKE

- 3 cups sugar
- 1 cup shortening
- 2 teaspoons vanilla
- 1 1/2 teaspoon banana flavoring
- 4 eggs

- 3 1/2 cups flour
- 2 teaspoons soda
- 1/2 teaspoon salt
- 1/2 cup buttermilk
- 6 ripe bananas
- 1 cup pecans
- Cream shortening, sugar, and flavorings. Add eggs, one at a time. Add sifted dry ingredients alternately with milk.

Mash bananas and add to batter. Add nuts, bake in large pan at 325 degrees for 60 minutes. Ice with 8 ounces cream cheese, 1 box powdered sugar, 1 teaspoon vanilla, 4 tablespoons milk and 1/2 cup pecans.

Another idea that is rapidly taking a back seat is that to make any kind of casserole dish you need ground beef to start with. Within the past few years we've learned to use chicken, tuna, sausage, chipped beef steak and a few other kinds of meat.

This week's casserole dish calls for frozen English peas, but if you have fresh green peas, they should fit in very nicely. Whether planning a company or family meal, try

### PEA-PORK CASSEROLE

- 1 pound pork cutlets or tenderloin cut in 1/2 inch cubes
- 1 tablespoon cooking oil
- 1 teaspoon salt
- 1/2 cup water
- 4 ounces dry noodles

- 2 tablespoons butter
- 1 tablespoon flour
- 1/2 teaspoon salt
- 1 1/2 cups milk including meat liquid
- 1 ten ounce package frozen green peas
- 1 cup celery, sliced thin
- 1 cup buttered bread crumbs

Brown pork in oil over high heat, stirring to brown evenly. Add salt and water, cover, reduce heat and simmer ten minutes. Cook noodles according to directions on package. Make a white sauce of the butter, flour, salt and milk, cooking it only until it starts to thicken and is smooth.

Butter a 2-quart casserole. In it, arrange a layer of half of the cooked noodles, peas, meat, celery and white sauce. Repeat, saving a few peas for a circle on center top. Ring with buttered bread crumbs. (Use 2 tablespoons melted butter to 1 cup soft bread crumbs.)

Bake 45 minutes at 350 degrees. Peas do not need cooking before being put into casserole. If they are frozen in a block, defrost at room temperature just enough to separate. Or put in a covered saucepan with 1/4 cup water over high heat for 2 or 3 minutes, separating them with a fork, if necessary.

Many home demonstration

club women are learning to cover shoes with fabric to match dresses. If you plan to include a checked gingham dress in your summer wardrobe, by all means use cross stitch embroidery for decoration.

Then cover a pair of shoes with the material and repeat part of your motifs decoration on the toes or sides of the shoes.

"Types of Farming in Texas" is the title of a new publication released by the Texas Agricultural Experiment Station. It is chock-full of useful information on what is happening in the 17 major type areas, agricultural wise. Copies are available from the Agricultural Information Office, College Station, Texas. Ask for B-964.

The USDA reports that food donations in the United States and overseas totaled 1.7 billion pounds for the first half of this fiscal year, July-December. This is an increase of some 20 percent over the same period a year earlier.

Applying fertilizer to farm fish ponds not only increases the amount of food in the water, it also is one of the best practices for controlling submerged mosses, says Ed Cooper, extension wildlife specialist. The first application should be made in early spring. Cooper suggests a visit with the local county agent for details on a good program.

**SOUTHWESTERN PUBLIC SERVICE COMPANY**

\*NO DOWN PAYMENT  
Pick the Ready-Lite of your choice — each month your electric bill will include the low monthly payment.

\*NO INTEREST  
All you pay is the cost of the Ready-Lite installed. All payments are interest-free.

\*NO CARRYING CHARGE  
Your sales contract will call for the price of the Ready-Lite of your choice — and that's all you pay.

\*24 MONTHS TO PAY  
You can pay cash — but it won't cost you a penny more to have 24 easy installments on your electric bill.

### Shower To Fete Miss Charles

Miss Harriette Charles will be feted with a come and go bridal shower Wednesday, June 7, between hours of 3 and 5

at home of Mrs. J.P. Macon. Friends are cordially invited. Hosting the occasion are Mmes. Henry Minter, Carl Rea, Charles Ross, Bedford Caldwell, Earl Stevenson, Roy Dodson, H.D. Bradshaw, Clarence Jones, A.R. McCutchan, Warren Embree, Mary Ruth Martin and J.P. Macon.

### Girl Born To Sonny Spurlins

Mr. and Mrs. Sonny Spurlin announce the birth of a baby girl born Tuesday, May 23 at Alamogordo, N.M. The eight pound infant is named Sharon Rene.

### Widow's Club With Mrs. Free

Mrs. G. E. Free hosted a covered dish luncheon for members of Widow's Club last Thursday in her home.

Following the luncheon the ladies spent the afternoon visiting. Their next meeting is scheduled June 22 in the home of Mrs. J. Sam Gaines.

### Bridge Club Entertained

Couples Bridge Club was entertained Thursday evening by Mr. and Mrs. Oakley Stevenson at their home.

Those present were Mrs. Maldee Brown, Miss Lula Smith, Mrs. Lillian Wheeler, Mrs. J. Sam Gaines, Miss Ellen Reminsider, Mrs. Troy Armstrong, Mrs. J. W. Buckner of Arch, N.M., Mrs. Margaret Caldwell, Miss Rita Caldwell and the hostess.

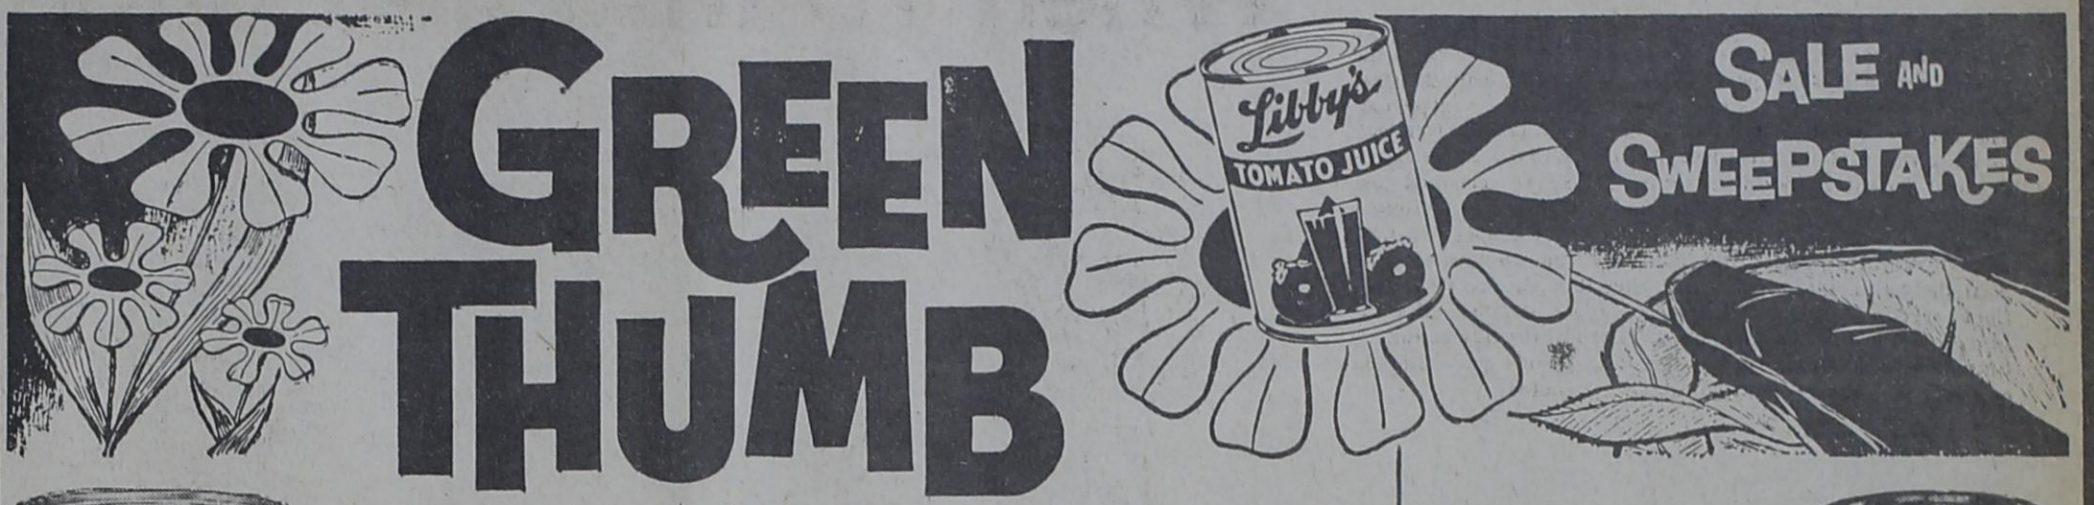

Mrs. Jimmy Ware and Vernon Willard won prizes for the evening. A snack supper of sandwiches, chips, relished and drinks were served guests.

### Local

Mrs. MaryRuth Martin visited her sister and family, Mr. and Mrs. Wayne Bell of Vernon, over weekend.

Attending were Mr. and Mrs. Ralph Roming, Mr. and Mrs. Leon Ware, Mr. and Mrs. Vernon Willard, Mr. and Mrs. Jimmy Clements and the hosts.

**PARMER COUNTY'S FINEST**

**SUPER MARKET**

BOVINA

**Little League--**

Mahon, Kelly Jamerson, John David Ferguson, Bennie Kent, Larry Riley and R.B. Riley. Three-Way Chemical players include Wayne Davies, Gaylon Hromas, Scotty Rundell, Bobby

Redden, Lowell Taylor, Jerry Morris, Roy Mayhew, Lonnie Filppin, Daryl Kirkpatrick, Johnie Hugh Horn, Kent Stanberry, Carroll Foster, Wes Harris, Jackie Hall and Junior Crawford. A complete list of Pee Wees

was not available at Blade deadline time.

Supplementary rules for the league say that each team member present at a game will play a minimum of two innings and will bat at least once. Failure for a coach to do this will automatically cause offending team to forfeit the game.

If either team is 10 or more runs ahead at end of four innings of play in Little League and three innings in Pee Wee, the game will be declared over. A pitcher may not pitch more than seven innings in one week--Sunday through Saturday--in Little League. Pee Wee pitchers may not pitch more than five innings in a week.

Fridays schedule sends Pee Wees against each other, Charles Oil-Bovina Implement vs. Parmer County Farm Supply, and Three Way Chemical against Oklahoma Lane Farm Supply.

**Whittlin--**

Democrats are going to rise again.

And before you get too proud of your new senator from Texas, remember who is Texas' senior senator.

That combination makes about as much sense as making a team out of a thoroughbred and the bull that was in the China closet.

From our standpoint two good things can come from Tower's election:

1. Republican Texans may be more willing to admit same and therefore work hard enough in getting Texas to be a two-party state to accomplish their goal, and;
2. Democratic voters may realize how important it is to do just that--vote--when doors to polls open.

We're indebted to Dean McCallum for political cartoon which appears elsewhere in this issue. We greatly appreciate his effort and figure that a minimum of 50 per cent of our subscribers will agree with it.

"I know he's rich, but isn't he too old to be considered eligible?"  
"My dear, he's too eligible to be considered old."

Wonder what happened to the idea that promptness is a good thing instead of bad. Used to one would hear the expression that "I would rather not go than be late." Now it seems that people won't go for fear of being the first one there and on time. According to various fads it is currently the thing to be "fashionably five minutes late." Any way we will probably be late to the very next social function since we spouted off about this bit of rudeness.

Have you ever noticed the fact that people's vehicles suit their personality. Have one particular one in mind. Bill Venable drives a red Chevrolet pickup and it has the most musical rattles. I've ever heard. When he drives by our house there is never a doubt in my mind that it isn't him. Think it suits him perfectly since he is usually smiling or laughing.
