## News From Our County Agent

Bagworm damage to evergreens such as arbovitae, cedar and other evergreen species is being found now, says County Agent Ronald Gooch. Evergreens should be watched carefully at this time of year, especially if old worm bags are found on the tree. Wingless females crawl out die after laying eggs inside the bag. In this case, each bag may contain hundreds of eggs which hatch into tiny larvae.

The newly-hatched larvae immediately start to make bags by chewing off small pieces of the tree. Young worms carry the bags wherever they go. The larvae can be killed with insecticides applied when the bagworms are still small. Chemical controls are ineffective when worms are full grown.

Chemicals suggested as controls include Sevin, Malathion or Toxaphene. The insecticide applications should be applied at 7 to 10 day intervals until the bagworms are eliminated. Directions on the container should be followed carefully, the county agent emphasized.

Mr. and Mrs. R. M. Saunders have returned from a vacation trip to Durango and Lake City, Colo.

Johnny Long has been ill in a Memphis hospital.

**Storm Warning**

Since the tornado season is with us again, it is time to remind everyone of the signals sounded by the fire siren. One blast of the siren indicates a fire, two blasts are to call the department together, and three blasts indicate a storm.

Three blasts do not necessarily indicate that a tornado has been sighted, but they do mean that everyone should watch the clouds and take whatever action seems to be necessary.
