Every minute of every day, your electric clock indicates with visible proof, the precision and dependability of electric service.

It's dependable, because electricity operates the clock faithfully — 24 hours a day. It's precise, because our electric system operates in time with a master clock at the U.S. Naval Observatory, keeping your clock in step, down to the second.

Your clock operates a whole year on about 43 cents worth of electricity...one of the bargains you get with your electric service.

Today, the average residential customer uses nearly twice as much electricity as he did in 1962. But the average cost of a kilowatt hour is 15% less now than it was ten years ago.
