Question:

Is Lone Star doing everything it can to hold down costs?

Answer:

Yes!

We're operating more efficiently than ever before. But our costs are going up none the less... just like yours.

For instance, the interest rates on money we have to borrow for constructing new gas supply systems have increased dramatically. These rates have recently been at all time highs.

Within the last 18 months, we have invested nearly \$100 million:

- to build a large diameter, 400-mile pipeline from West Texas to the Dallas-Ft. Worth area,
- for other facilities along this pipeline,
- to attach major new reserves and
- to pay for well drilling by producers... all for the purpose of assuring continuing natural gas supplies to our customers.

These investments don't even include the cost of all the gas we must buy to fill the line. In 1969, natural gas

cost us about 19 cents per thousand cubic feet.

Recently we paid more than 85 cents for major new supplies. And the price is still rising.

Costs like these are the price Lone Star must pay for your continuing natural gas supplies. It's important that you understand our need for adequate rates so we can continue to deliver clean gas energy to your home for winters to come.

We're doing everything possible to hold down controllable costs. But even with gradual rate increases, natural gas from Lone Star will still be your most economical and efficient non-polluting fuel.

6 WAYS TO CONSERVE AND SAVE

ON WINTER HEATING

1. For savings on energy, set the thermostat on the temperature setting that provides adequate comfort (the President suggests 68°). Don't continually switch it up and down. Remember, the lower you set the thermostat in the winter the more money you save on energy.
2. A routine service inspection by a qualified service man is advisable prior to the heating season. Follow the manufacturers recommendations on this. Clean filters keep the heating unit operating at maximum efficiency and economy. Filters are the most neglected part of any forced-air heating system.
3. A wood burning fireplace should be equipped with an efficient damper. Be sure to keep the damper closed when not in use. A chimney with the damper open carries warm air out the house, wasting heat.
4. To decrease heat loss and reduce energy cost in rooms that are not in use at night or in extremely cold weather, draw the draperies and lower the shades over the windows, glass panels and doors. If the sun is shining on glass areas, open the draperies. The sun shining through the glass will supply additional heat at no cost.
5. Some wall heaters have fan-forced circulation. To clean, turn the unit "OFF". Blow dust out of unit with vacuum exhaust attachment. Clean the grill cover with a vacuum or warm detergent water.
6. Proper insulation and weather stripping will make your home more comfortable. It will help keep dust and dirt from blowing in, and will help to eliminate cold drafts in the winter time, thus saving money on your heating bill.
