Are Natural Gas Curtailments Going To Affect Me?

During cold days in the winter, when the demand for natural gas is really high, some industrial users are asked to cut back their consumption of natural gas. But we want to assure our residential and other high priority customers that it's highly unlikely their natural gas service will be interrupted.

The pipelines used to deliver natural gas can only hold so much gas. And during extremely cold winter days, there's sometimes more demand than we can supply. Some people ask, "Why not build bigger pipelines?" But that would be like building a church for the Easter or Christmas attendance, rather than the weekly congregation. The cost would be tremendous and gas rates would be much higher.

Instead we developed a "curtailment" program many years ago. Our industrial customers have signed contracts agreeing to "curtail" their use of natural gas during these peak times. And in return, they pay a lesser rate reflecting the probability of being interrupted.

If you were considering replacing an existing gas appliance or purchasing a new one, be assured that Lone Star can provide the energy. We have the natural gas, and our residential and other high priority customers may continue to rely on Lone Star's dependable service now as in the past.
