## **General Telephone Company Installs Facilities For 400 New Customers**

General Telephone Company of the Southwest has announced the completion of two major service improvement and expansion projects in Sonora, and the beginning of a third.

## SASA Reports 1974 Assets

Continued growth, progress in real estate development and increased assets were reviewed at the annual stockholders meeting of San Angelo Savings Association, in session this

Association President, H. J. 'Mickey' Sallee, reported assets of \$51,984,393.25 as of December 31, 1974, reflecting an increase of \$2,843,551.36 for the year.

In October 1974, San Angelo Savings Association expanded its operation by opening a third office. Located in Sonora, this new branch contributed to the last quarter's growth of the association, according to

Mr. Sallee also informed stockholders that the association's application for a branch office in Ozona has been approved and arrangements are now being made to open a SASA Ozona branch. San Angelo Savings has in excess of \$600,000 in savings and approximately \$900,000 in loans from the Ozona area.

According to Jack Goss, San Angelo division manager, additional switching equipment has been installed in the central office on Crockett Avenue to provide facilities for 400 new telephone customers. Such additions are made on the basis of telephone surveys designed to determine communications requirements necessary to keep pace with the growth of the community, Goss added.

In addition to the switching equipment project, an outside cable project has also been completed. Starting in the spring, the project almost doubled the telephone cable facilities in Sonora. A large cable containing 1,200 wires was placed along Crockett Avenue South to Second Street. Another cable containng 600 wires was placed from 2nd Street to West Del Rio

To the north, another major able was on Crockett from Oak to 8th Street.

Preliminary work has begun on the third project which calls for the placement of an underground long distance cable from Sonora to San Angelo, according to Goss. Rights of way and easements have been negotiated and actual construction is scheduled to begin in the first quarter of 1975. The cable will replace the present aerial open wire facilities and provide for increased long distance calling.

steel rails can, with the same amount of fuel, move about four times as much freight as their primary competitor-diesel trucks running on the nation's highways. Because of this fuel advantage and other factors, it is estimated that the demand for railroad services

## **How Come?**

An anonymous philosopher commenting on the unexpected turns of life has noted that -modern technology is really a wonderful thing. It has produced a 15-cent soda can which, under some conditions, will last virtually forever. It has also produced \$5,000 cars increasing in price at the rate of five to six hundred dollars per year. The remarkable thing is that these marvelous machines when greased and taken care of by a prideful owner usually rust out or wear out in 3 or 4 years.

While the experts are worrying about improving the gas mileage and environmental compatability of the American automobile maybe they can also do something about its longevity---especially now that it costs as much as a house once did not too many years

1504 TAYLOE 387-2462 **OPEN 9-6 WEEKDAYS** 9-5 SATURDAYS

A string of cars rolling on will increase by some 50 percent by 1985. This being the case; measures which strengthen U. S. railroads are vital to the nation's future.

Congressional action to mod-

ernize federal regulation of U. S. railroads is urgently needed. Regulatory changes should permit the rails to compete for business with other modes of transport. In a time of inflation, necessary upward adjustments in rate schedules should be allowed without long delay. The financial weakness of some of the nation's railroads, reflected in less than adequate levels of profit for the industry as a whole, has been sharply aggrevated by failure to act on legislative proposals that would among other things, improve rail regulatory machinery. This remains a matter of urgent congressional business. The importance of strengthening the nation's rail system is also highlighted by recent safety statistics. While railroad safety in terms of significantly fewer human casualties and injuries over the past 10 years is excellent, there has been an increase in accidents such as derailments resulting from the operation or movement of trains, locomotives or cars. The

## We'll Be Watching

Gone are the catchy political slogans, colorful posters and whirlwind trips along the campaign trail. The voters have once again made their voices heard in nationwide elections. In the months and years ahead, the American people will be watching to see if their legislators' voting records on Capitol Hill truly reflect the wishes of the majority. Will our Congressmen and women be willing to tackle the major cause of inflation--deficit spending by the federal government? Can we rely upon them to vote for anti-inflationary measures even if it means stepping on a few toes in the process?

Americans are tired of double-digit inflation. Any politician who values his job will take note of the people's desires and respond accordingly. Action, not promises, will

increase in this type of accident can be related quite directly to a lack of operating and capital funds which has forced some roads to postpone needed maintenance of roadbed and equipment.

U. S. railroads are spending hundreds of millions of dollars on research and development for the purchase of new equipment and the upgrading of all facilities to meet the opportunity for service that is before them. But it is a regulated industry; and, in the final analysis, the railroads of the future cannot be built under regulatory rules and attitudes fashioned to control a transportation monopoly of a hundred years ago that no longer exists today.

## **Deadbeat Haven**

If this country ever expects o get out of the financial and nflationary woods, one thing is certain. Someone will have to stick his neck out and place the balance sheet ahead of visions of social Utopia when it comes to making economic decisions. Illustrating the wrong-way

approach that plagues us is a story coming out of the State of Michigan reported in the News-Palladium of Benton Harbor. It seems the State Public Service Commission has cooked up some new rules that it says utility companies will have to follow in billing their customers. The new procedures are called "Consumer Standards and Billing Practices" and are described by one of the commissioners authoring them as a consumer triumph. The newspaper says they will make the State of Michigan "safe for deadbeats," and calls them "...a disaster for people who pay their bills on time. They'll be subsidizing the chronic chiselers." The new regulations will give a customer 21 days to pay his bill, extend service to a customer until he proves to be bad credit risk and, as a final straw, before service can be cut off assure each customer the right to demand a hearing where the utility will have to prove it has not in some way violated the non-bill paying constitutional customer's

In the words of the newspaper, "Besides making Michigan safe for bad credit risks, this is guaranteed to make the state more expensive for utility users who regularly pay their bills on time...It's just another 'soak the middle class' idea. If government really wants to make electricity cheaper for everyone, let it balance its budgets so interest rates will come down. New utility plants can then be built economically." As the Benton Harbor editor observes, the Michigan Public Service Commission apparently is determined to make its own private social philosophy part of the electric rate structure. These days when inflation is the number one problem for the average family, this can only be described as an eminently poor way to regulate an industry providing essential utility services.

## **News Letter**

By Bob Krueger

In this, my first report to the district since it honored me by electing me its representative, want to comment on two things: the state of Congress and the state of the Union.

First, the state of the Congress. Some press reports have suggested that the large number of new members come from basically conservative districts, like ours, and I doubt that those members campaigned in favor of big new spending programs. Further, I doubt that they will vote for such programs. Certainly I do not intend to.

What the new Congress has done, however, is to bring reforms and procedures that altered the seniority system. Now districts with new congressmen have a chance of a more equal voice, so that they can be represented as effectively as the districts of long time senior members. This change reflects democracy: all congressional districts should be equal and their need be no apology for these reforms. They will help the 21st District and the American system.

Second, the state of the Union. The President in his address said that the state of the Union "is not good." I disagree. Yes, we have problems: high inflation, deepening recession, uncertainty. about our national direction. But improvement lies within our power. We can work to control federal spending, and I will do so. We can give short-term, immediate tax relief to those most in need, as the President suggests, but we must always recognize that money spent today must be paid tomorrow, and I have strong reservations about the massive deficits that the President is asking for and that some in Congress will be willing to provide. The only way that I know to restore government to sound financial footing and to control inflation is to have the government live within its income. I will work for that, and I will work to find others to join me.

I hope to use these columns to give you a first hand report from your Representative on events in Washington, and I hope you will call on me for help with any particular prob-

## THE DEVIL'S RIVER PHILOSOPHER SEZ.....

He Figures Out A Way To Keep **Arab Money From Piling Too High** 

River Philosopher on his bitterweed ranch on the Dry Devil's River offers some financial suggestions this week on a world problem.

Dear editor:

According to the deep-thinking newspaper columnists I've been reading lately one of the major problems facing the world today is what to do about all that money the Arab nations are piling up from that \$12-a-barrel oil. Oil that cost them about two-bits a barrel.

They call them petro-dollars and declare that a way must be found to re-cycle them, get them back into circulation, or else the Arabs will wind up with all the cash and the rest of us will go broke. The trouble with those columnists is that while they're good at stating the problem, they fall down when it comes to solving it. They wring their hands and move on the something else. They act like Congressmen.

Now I've been thinking about this Arab money problem and have come up with some suggestions but I don't know how far I'll get because I don't know how much circulation the Devil's River News has among the Arab nations.

Anyway, to keep all that money from stacking up and to get it back into circulation, here are a few ways the Arabs could invest it:

1. Go into the ranching business. 2. Start a new football league. 3. Bring out a new car getting four miles to the gallon. 4. Buy gold at \$200 an ounce. 5. Explore outer space. 6. Finance South Viet

Editor's note: The Devil's | Nam the next 10 years. 7. Buy out the post office department. 8. Send their kids to college. 9. Manufacture 50 million WIN buttons. 10. Feed my cows this

You get them to do just half of the above 10 and I guarantee most of their money will evaporate. Get them to do all of them and they'll be trying to borrow money from

Yours faithfully,

## A Bishop Looks at Life

by Everett H. Jones, Retired Bishop of Episcopal Church

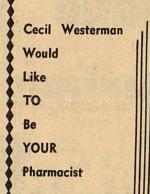

> THERE ARE STILL **GREAT AMERICANS**

In our growing observance of America's 200th anniversary there is deserved recognition of the remarkable men who laid the foundations of our national government. It is easy to infer from this exercise in looking backward that America no longer produces such individuals. This is not at all true. In fact, two very outstanding Americans died during the past

Augustus Lindbergh. Not only did Lindbergh begin a new era in aviation with his flight from New York to Paris in 1927, but in his versatile achievements he was a modern Benjamin Franklin. In 1936 he worked with Alexis Carrel to invent a perfusion pump called an artificial heart. He was opposed to America's entry into World War II, but nevertheless he offered his services to the Air Force. He flew combat missions in the Pacific and shot down at least two enemy planes. He was an ardent leader in programs for conser-

He shunned publicity and maintained a life pattern of simplicity. He was buried in a khaki shirt and dark cotton trousers. His casket of eucalyptus wood was built by cowboys from nearby ranches

in Hawaii. His funeral service included hese words he had written himself: "We commit the body of Charles A. Lindbergh to its final resting place, but his spirit we commend to Almighty

God, knowing that death is but a new adventure in existence and remembering how Jesus said upon the Cross, 'Father, into thy hands I commend my

Another great American who died in 1974 was the philosopher-journalist Walter Lippmann. Not until his recent death did the public know the extent of his influence both in this country and abroad. He was the intimate friend and advisor of presidents and political leaders. He was the author of 26 books; thru more than 4,000 of his "Today and One of them was Charles Tomorrow" columns he reached millions of readers.

> Lippmann was once asked, What do you love?" He replied: "The Living World." In short, the outreach of his mind and heart was world-

One of his comments is of particular interest at this time: The world will go on somehow, and more crises will follow. It will go on best, however, if among us there are men who have stood apart, who refused to be anxious or too much concerned, who were cool and inquiring, and had their eyes on a longer past and a longer future."

## **Ellis Named** Who's Who

Michael Duke Ellis is one of 21 students on the campus of the University of Texas' Medical Branch in Galveston, chosen for membership in the 1974-75 Who's Who Among Students in American Universities and Colleges Honor Program.

Ellis will receive a personalized certificate at this school in recognition of this national honor. His complete biography. including his college record, will be presented in the 1974-75 edition of the program's 41st volumn. He is the son of Mrs. Lea Roy Aldwell.

A picnic ham is the front shoulder cut of pork, cured in the same manner as ham, explain Texas Department of Agriculture home economists.

## Screwworms **Decline From** 1972 Peak

The 6,902 screwworm cases recorded in Texas during 1974 compare to 8,913 during 1973, and 90,890 during 1972, notes Dr. M. E. Meadows, director of the U.S. Department of Agriculture Screwworm Eradication Program.

December cases totalled 66, compared to 486 in December

Meadows gives credit for the esser numbers in 1974 to ranchers who promptly submitted samples of suspected screwworm infestations and carefully worked to keep numbers of this live flesh eating parasite at a comparitively low level during 1974. "Weather helped, too," he commented, noting the relatively dry year over much of the screwworm barrier zone.

A build-up of screwworm cases in sheep and goat rearing areas was noted during the late summer and fall shearing season. A large number of cases was also noted from ear-tick caused wounds in South Texas during September, October and the first part of November.

Dr. James E. Novy, director of field operations for the program, which is administered by the Animal and Plant Health Inspection Service, notes that many of the September and October cases were in navels of newborn calves.

'These are the two months when screwworms are usually most plentiful. Ranchers could help the program next year by controlling breeding so calves are not born in those months,"

The screwworm Barrier Program is based on the sterile male release technique and seasonal weather patterns. Winter weather kills the wild population south into its warm over-wintering areas. Sterile flies are released

along the northern border of the wild fly population to force it even further south during the winter. In spring and summer, as flies migrate northward with warming weather, sterile males are released to slow movement and attempt to keep screwworms from reaching the United States.

"Insurance is great!"

If you have it when you need it. But what if you don't have it when you need it? The lack of proper insurance in time of serious loss has bankrupted many a business - many a family fortune. Stop in at Morgan & Hunt Insurance and let us analyze your risks and suggest adequate insurance protection.

 A weekly public service feature fromthe Texas State Department of Health

Head lice--they're getting nto everyone's hair these

While not literally true, this line from a new State Health Department film, "Head Lice: Questions and Answers", points to a continuing and growing problem in cities and towns throughout Texas, and the nation, for that matter.

School nurses and public health clinic nurses may see pediculosis, an infestation with human lice, from time to time. Of late, this has been a more frequent occurrence. The general public may not hear so much about pediculosis, for those affected are reluctant to spread this information. And, it isn't a reportable disease, thus keeping it from public ttention.

The person who does understand a louse problem is the victim. Pediculosis can be a night and day torment with the itching and burning and discomfort which it causes. The constant scratching can produce an infection. And, it can be so distracting as to cause learning problems in school.

Human lice are a group of nsect parasites which live on the bodies of their victims. They are known as sucking lice and depend on the blood for nourishment. The warm human body also provides warmth and moisture, says the Health Department.

The three types of human lice are: Pediculus humanus capitas, the head louse; Pediculus humanus humanus, the body louse; and the crab or public louse, Pthirus pubis. The head and body louse have almost the same physical size and shape, but the crab louse has a rounder body and its second and third pairs of legs are larger than the first pair near its head. All types are small, with adults ranging from 1/16th to 1/8th of an inch in length.

The eggs of the lice--called nits--are attached to the hair shafts of their hosts with a cement-like substance. In the case of the body louse, the nit may be attached to clothing fibers.

Three types of lice infesting humans live only on humans Animal lice, on the other hand, can't maintain themselves on humans. And, it's possible for a person to have more than one type of lice. Of the three kinds of human lice, only the body louse has been implicated as vector of louse-borne relapsing fever and epidemic typhus in times past.

While head lice are being experienced more often in school situations, the other forms of lice also are prevalent in our society.

While lack of cleanliness may contribute to the spread of lice, it is possible for anyone to become infested.

Crab lice are very sluggish and dependent on man, dying within 24 hours of removal from the host. An infestation will spread slowly through a group of individuals such as a ship's crew or commune residents. They are spread chiefly by sexual contact, but often are acquired by such other means as infested toilet seats or beds and by close personal contact.

Body lice infest the clothing of man, particularly undergarments next to the skin. They are also known to wander about extensively. The habit of living mainly on clothing---and traveling to the skin for nourishment---has restricted body lice in civilized commun-

ities to a small minority of people who seldom wash or change their clothes. All forms of lice may be found on clothing, however.

The head louse attaches its nits (or eggs) to human hair, the nits resembling a stubby branch. The nit is cemented at an oblique angle, and this is helpful in distinguishing it from foreign substances in the hair. The eggs, incubate by body heat and hatch in about a week. The louse nymphs undergo three growth stages requiring eight to nine days. Sexual maturity is reached in approximately two weeks.

While the presence of lice may be noted by the itching, the first visable signs of infestation may be the nits attached to the hair. Head lice and their nits usually are found in the hair behind the ears and along the nape of the neck. The eggs may be seen in clusters along the hair. However, it's possible that some other foreign sustance such as globules of hair spray may be confused with nits. This has happened. Also, some investigators have observed that casts from hair follicles may be found on a hair and that these nodules, which will slip up and down on the hair shaft, are mistaken for nits.

State Health Department authorities emphasize that the temporary presence of head lice isn't necessarily an indication of lack of personal hygiene. And infestation might

be required by almost anyone. Head lice may be spread in number of ways. The spread from individual to individual may be accomplished by using the same comb, scarf or hat, or sleeping in the same bed since ice do come off on these bjects. They also may be spread by upholstered head rests of chairs and couches and perhaps less frequently via the nead rest of a school bus.

No matter how the head lice are acquired, they may be hard o get rid of. You'd think that wimming or washing your hair would get rid of the lice and nits. However, this isn't the case. They resist water and ordinary soap and water.

Bathing or washing your hair it temperatures you can tolerate won't kill out the head lice. Some may wash off, however, but the nits will stay alive and hatch out. Killing off head lice may

urn into a family affair. If one person has head lice, the entire family needs to be treated at the same time. To rid household articles of lice, clothing, bedding, towels and washcloths should be laundered frequently in hot water. Washable head gear also should be aundered at the same time. Combs and other hair styling articles need thorough and frequent cleaning, and the

home should receive a thorough vacuuming, including the bathroom. Personal hygiene, frequent

bathing and shampooing of hair are very important in preventing the establishment or re-establishment of lice. But if you're infested, you'll need a louse-killing insecticide shampoo to rid yourself of them. These are available at drug stores. Your family physician may prescribe one, or you may receive the names of these products from your school nurse or public health clinic. Most drug stores have two or three brands in lotion, cream, gel or shampoo form.

It is important in treatment to follow the directions closely and continue the treatment for the prescribed time. Remember, you're dealing not only with lice but their eggs as well. Dead nits may be removed from the hair with a fine tooth comb following treatment for the proper time.

In a bulletin, "Twenty-three Most Frequently Asked Questions About Lice," the State Health Department gives some valuable hints on dealing with lice. For instance, it states that lice seldom live longer than 48 hours when removed from the human body. Under ideal laboratory conditions, male body lice have lived as long as 32 days and female lice have survived 46 days; however, under normal conditions, even body lice seldom live longer than a day or two when deprived of their human host.

Each female head louse may ay from 50 to 150 eggs in its lifetime while the female body or crab louse may produce 200

What effect does temperaure have on lice? Hot temperatures will kill them. Such high temperatures are suitable for laundering purposes but not for shampooing the head or for bathing. Dry heat, steam, or pressing with a hot iron will destroy lice since they can live only a few minutes at 120 degrees Fahrenheit. Most home water heaters supply water at 140 degress to 165 degrees. Washing in cold or lukewarm water won't kill

How do head lice travel? They are transported by people and do not hop, jump or fly. They have powerfully developed legs, each provided with a claw and an opposing thumblike process that is adapted for

## **HNG Elects Vice President**

Hubert C. Daugherty has been elected Vice President-Operations of HNG Petrochemcals, Inc., a wholly owned subsidiary of Houston Natural Gas Corporation.

He will be responsible for he operations of all Houston Natural plants, as well as for the study and development of new plants. He joined the Houston Natural organization in 1963 and has been manager of plant operations for HNG Petrochemicals since 1967.

'Activist' Shareholder

Suppose a political activist buys one share of stock in a corporation that makes guns. His purpose is to gain access to a list of shareholders, so he can arouse their opposition to the company's prod-

Would the company have to let him see the books?

Most courts faced with this question have said no. True, every stockholder is a co-owner of the corporation. However, say these courts, the relationship is strictly economic, not political. To see the books he must have an economic motive. He must be acting, at least in part, to protect his investment.

The activist shareholder is new but the problem is old: how open should a corporation's books be? Clearly, there has to be some sort of limitation on access. As one judge explained, in barring a stockholder who was "just curious":

"Considering the huge size of many modern corporations and the complicated nature of their bookkeeping, to permit their thousands of stockholders to roam at will through their records would render impossible not only any attempt to keep their records efficiently but the proper carrying on of their businesses.'

On the other hand, a stockholder with a legitimate economic motive generally cannot be prevented from seeing the books merely because the management doesn't happen to like him.

One stockholder was refused access to his company's books because he was considered a "troublemaker." He was indeed a troublemaker. But the trouble he wanted to make was getting rid of the management, which he thought was doing a bad job of running the business.

In these circumstances, a court ordered the company to open the books for his inspection. The court said that for a disgruntled investor, throwing the management out was a natural and proper ob-

## **Plant Trees And Shrubs Properly**

If you're planning on adding trees or shrubs to your home landscape this winter, make sure you plant them correctly, says D. C. Langford, county agent for the Texas Agricultural Extension Service.

"The first step in planting bare-root or balled and burlapped plants is to dig a hole large enough for the plant," says Langford.

"For a bare-root plant, the hole should be large enough to allow the root system to spread out. The plant should be planted as deep as its original soil line. This is usually about two to three inches above the uppermost roots."

For a balled and burlapped plant, the hole should be about one and a half times the diameter of the ball, says the county agent. Plant it so that the top of the soil ball is at the surface of the soil.

The next step, says the county agent, is to fill the hole

Off To An Early Start Most of the food and feed crops now grown in the United States were established in colo-

nial America by the end of the 17th century.

Fertilizers In Demand

It's estimated that four times the amount of fertilizer now being used would be required to double food production in the world's developed coun-

Thanks To Henry Clay Hereford cattle were intro-

duced in this country by U.S. Statesman Henry Clay in 1817. That's Progress

In 1953, some 8.9 million farm workers fed a total U.S. population of 159 million. As of 1974, only 4.4 million farm workers were feeding the nation's 210 million residents.

water the plant thoroughly. A soil ridge around the edge of the hole will help hold rainwater in dry areas as well as facilitate watering with a garden hose.

"Use fertilizer only after the plant has started growing,' adds Langford.

## **Texas Cities Schedule Rodeos**

Fort Worth, San Antonio and Houston are among Texas citites that have scheduled rodeos and livestock expositions beginning soon.

The Fort Worth Southwestern Exposition and Fat Stock Show Rodeo is to begin January 24 and continue through February 2. The show will be held in the Will Rogers Coliseum with evening shows as well as matinees on the weekend.

A big midway carnival will be held in conjunction with the rodeo as well as the more than 600 commercial exhibit booths.

The San Antonio Stock Show and Rodeo will be held February 7 through February 16 at the Joe Freeman Coliseum. Stars for the show this vear will be Lynn Anderson, Johnny Rodriquez and the Statler Brothers.

Houston's Livestock Show and Rodeo will begin February 19 and continue through March 2 with the first rodeo performance on February 21. Highlighting outside activities will be the old-time fiddlers contest and the barbecue contest. Both events are scheduled in a special area set aside in the Astrodome parking lot.

## Sales Tax Bonding **Needs Eased**

Comptroller Bob Bullock issued regulations January 13 to ease sales tax bonding requirements on existing businesses which change their technical legal status without actually changing ownership or management.

Under the new regulations the Comptroller will take into account a business' tax payment record in deciding bond requirements in such situations as when a partnership becomes a corporation, a single ownership becomes a partnership or two businesses merge.

"We shouldn't penalize a good taxpaying business just because it changes its name. The bond requirement on new businesses is an effective way of cutting tax losses but it should be applied with common sense," Bullock said.

Bullock said the new regulaions will be retroactive to January 1, 1974, the date the new bonding law went into effect, and that "unreasonable bonds slapped on good businesses during the past year will be reviewed under the new

The Comptroller's authority to consider previous payment records of businesses changing their legal structures but keeping essentially the same management was clarified in a recent Attorney General's opinion. Under the bonding law the Comptroller determines the size and kind of security to be posted by new businesses or businesses with delinquency records.

Sonora's Varsity boy's basketball team lost their district bout last week to a tough Crane team 80 to 57. High point man for the Broncos was Paul Browne with 21 points. The varsity

girl's team defeated the Crane girls 40 to 32. In Junior Varsity action, both the girl's and boy's teams were defeated.

## **Sonora Girls Bounce Crane** For 40 - 32 District Victory

Trailing 27-26 with six minutes remaining, the Sonora Broncos outscored Crane 14-5 to take a 40-32 victory in the girl's varsity game last Friday night in the Bronco gym. The girl's victory highlighted a four game stand against the hightly touted Crane roundballers.

After six straight points by Crane, Laura Gibbs hit from 18 feet to give Sonora a 28-27 lead with 6:08 left to play. The Broncos never trailed again as Sheila Alexander took a pass from Renee Rousselot for an easy two at 4:37 of the final stanza. Rousselot had replaced Beverly McDonald in the final four minutes after McDonald went out with an injured ankle. McDonald had been the key to the Bronco success through the first three quarters with her excellent playmaking and ball-hawking aggressiveness. Rousselot proved to be an ample replacement as she ran the Broncos offense to perfec-

After Gibbs scored on a hree point play with a pass from Rousselot, the sophomore playmaker hit Alexander on another back door pass to give the Big Red a 36-30 lead with 3:33 remaining. A free throw

## 8th Grade Broncos Take 25 - 15 Win

The Sonora Junior High basketball teams took on Eldorado last Thursday in Bronco gym with Sonora capturing only the 8th grade boy's game.

Benny Granger poured in 9 points to lead the Broncos to a 25-15 victory over Eldorado. Mike Jones had 6 points while R. B. Alexander and Cody Savell added 4 points each. Pat Street had 2 points in the victory.

In the 8th grade girl's game, Eldorado proved too tough for Sonora as they downed the Broncos 23-16. Pam Powers and Mary Gomez led Sonora with 6 points each. Yvonne Berkley and Debbie Green had 2 points each. The 7th grade boys lost 25-20 while the 7th grade girls fell 26-19.

by Rousselot and Alexander stretched the lead to 38-32 and then Gibbs closed out the scoring in the final minute with a 10 footer.

It wasn't all offense for the Broncos as Debbie Howard, Martha Elliott, Lesa Joy and Suzanne Renfro played outstanding on defense. Howard led the way with 9 rebounds while Renfro and McDonald had 5 rebounds each. McDonald and Renfro led in steals with 3 each.

Fine outside shooting paid off in the victory as Alexander hit on 5 of 8 field goals while McDonald hit on 3 of 5. Gibbs was true on 7 of 19 field goals. Gibbs broke the 500 point barrier with her 16 points in the victory. She now has 501 points for the year for a 25.5 game average. Alexander was high for the game with 17 points. She is averaging 18.9 on the season. McDonald turned in a 6 point performance while Rousselot had 1 point to round out the scoring.

The Bronco girl's varsity is now 1-1 in district play and 7-12 on the season.

## Broncos Faff To Cranes

The 1974 state runner-up, the Crane Golden Cranes, rolled in Sonora Friday night and proved once again that they must be content with the top spot in state. Supporting an 18-1 record, they made it 19-1 with an 80-57 win over record, Crane made it 19-1 with an 80-57 victory over

## Sonora JV Teams **Lose To Crane**

The Sonora Junior Varsity boys and girls found the going a bit tough last Friday night at Bronco gym as both teams fell to the Crane Golden Crane. The J. V. boys dropped a hard fought contest 58-48 while the girls were downed 30-23.

Tied after three quarters, 38-38, a 6 point play by Crane enabled the Cranes to take a fourth quarter victory. The Cranes outscored the Broncos 20-10 in the final stanza. Louis Samaniego led the Broncos with 22 points followed by Jeff Doan with 12 points. Tony Mathews had 5 points for the Broncos while Frank Gallegos added 4. Johnny Creek rounded out the scoring with 2 points for the local team.

The JV girls led 10-8 after the opening quarter but saw Crane outscore them 10-0 in the second period enroute to a 30-23 victory. Becky Cavaness led Sonora with 10 points while Gloria Gomez had 8 points. Nancy Mooney had 5 points in the loss. Jane Wallace, Abby Sanchez, and Mary Sue Galindo led the defensive unit for Sonora. With the loss, the Broncos dropped to 0-2 in district and 7-11 on the season.

Sonora gave Crane all they wanted for the first 8 minutes as the locals played inspired ball behind the passing of Paul Browne and the shooting of Clay Hicks. Sonora trailed only 14-12 after the opening period but saw Crane run off 14 straight points in the second quarter.

John Elliott kept the game close during the fourth quarter as he hit on numerous jump shots as did Browne, but the damage was done as Crane took the victory.

Paul Browne led the Broncos with 21 points while sophomores Gregg Parker and John Elliott had 14 points each. Clay Hicks, who left early due to the foul route, had 10 points. Lindsey Hicks finished the night with 6 points while Hector Perez had 2.

Fine defensive play was credited to Robbie Hard, Clay Hicks and John Elliott. Clay Hicks led with 7 rebounds while Browne had 4 steals. The Broncos hit on 9 of 13 free throws and 24 of 58 field goals.

Sonora will travel to Ozona this Friday night. All Bronco Boosters are urged to attend the game. The Broncos need your support.

Texas Department of Agriculture home economists recommend adding basil, mace, marjoram, nutmeg or oregano to spinach for a gourmet touch.
