BRONTE, COKE COUNTY, FRIDAY, JULY 18, 1941

NUMBER 28

Meeting at Church Of Christ To Begin Tonight

Everything is in readiness for the beginning of the evangelistic meeting at the Church of Christ, which is scheduled to begin this Friday evening.

Elder Silas Triplett of Granbury, will conduct the meeting. Elder Triplett is known as a most worthy Christian gentleman and a minister of capability and an interesting and pleasing pulpit speaker.

Members of the congregation have arranged for an open, outdoor meeting, beneath the stars, where it will be cool and comfortable. The congregation is sparing no time or effort to have all the arrangements perfect so that those who attend may enjoy the worship, under the comfortable circumstances.

Lester Parker of Abilene is the minister of the congregation and through the past several months he has developed quite an interest among the membership and therefore local conditions are favorable to interest in the meeting from the beginning. Elder Parker, however, may not be able to be much in attendance at the meeting as he is engaged in work at Camp Barkely which demands much of his time.

The meeting will continue ten days and interested members of the congregation extend an invitation to each and all to attend the worship each time throughout the days of the meeting, continue.

Old Time Citizen At Blackwell, Passes Away

W. F. Blair, an old time citizen of Blackwell, died at the farm home of the family, early Thursday morning, July 10, 1941, and interment was in the Blackwell cemetery, at noon, Friday, following religious services, conducted by Rev. Frank Smith, pastor of the Robert Lee Apostolic church.

Deceased is survived by his wife, seven sons, six daughters, 38 grand children, seven brothers and two sisters. Simpson & Co. Funeral Home at Robert Lee had charge of arrangements.

Aged Lady at Norton Dies

Mrs. T. W. Sharpes of Norton died at the family home there, late Wednesday afternoon, July 9. Interment was at Norton Thursday afternoon, following religious services at the Norton Baptist church, conducted by the pastor, Rev. W. T. Sparkman. King-Holt, Ballinger, were in charge of arrangements.

Deceased was 75 years old. She is survived by six daughters: Mrs. Joe Yarnell, Mrs. R. C. Sharps, Mrs. Thomas Turner, Mrs. Caswell, Norton; Mrs. Rober Hodges, Drasco; Mrs. Bill King, Fort Worth; four sons, Clarence and Kenneth Sharpes, Happy; and Homer Sharpes, Dallas. She also leaves Mrs. Linnie Depew, both of Austin. Twenty grandchildren and 16 great-grandchildren also survive.

Pallbearers were Harris Steel, Carl Lewis, A. T. Chapman, Bob Alln, Marcus Turner and John Rayburn.

Bronte U. S. O. Exceeds Quota

The Bronte Community has exceeded its quota in the U. S. O. according to Mr. S. A. Kiker, chairman of precinct Number 2. The following list of donors includes the following persons and firms contributing:

Mrs. R. L. Wrinkle Dies, After Long Illness

Mrs. R. L. Wrinkle, 73, a resident of Bronte since 1921, died at her home at six A. M., Tuesday, July 8. Funeral services were held in the Kickapoo Baptist Church, the following Wednesday, with the Rev. Charles Carroll, Baptist Minister of Richland Springs, officiating. Burial was in Fairview Cemetery of Bronte.

Survivors are her husband, five sons, A. L., G. R., W. E., and Bill Wrinkle of Bronte, and D. T. Wrinkle of Cisco. One sister, Mrs. W. H. Townsend of Pendleton, and three brothers, George Denniss of Idalou, and Frank and Ed Dennis of Goldthwaite.

Pallbearers were Earl Box, Charles Sims, Garland Spencer, John Colson, Noah Pruitt, and Will Stephenson. Folwer girls Juanita Coalson, and Ollie Jean Warner.

better position to serve the young people employed on NYA part-time jobs in their institutions as a result of the NYA information program concluded this week, which was sponsored by 34 Texas colleges in cooperation with the State NYA School work Council, J. C. Kellam, state NYA administrator, said today.

An estimated 5,000 school students, including scores of school officials and educators, were reached by Council members and NRA personnel through class meetings, individuals, and work both the NYA Student Work and Out-Of-School Work programs were discussed.

OUR MOTHER NEEDS US Barrie Greenfield

Our mother needs us,
May our thoughts wonder back to 1775,
When we broke away from England,
Like bees from an old bee hive,
That was for freedom—yes, and democracy,
But, those days did not last long—
Those days when we were free.

Then, came the war of 1918,
When our eagles had proudly flown;
We came out with victory,
Our stars and stripes had shown
That war is most horrible,
With its bloodshed and its pain.

But, look at 1940—
That war has come again;
Look at that Nazi party—
A war machine in power,
They have wiped out France,
England holds only by the hour.

Come on, all ye Americans,
What are we waiting for,
Our dear old mother needs us—
Lets help her win that war,

We are just like a wandering boy,
Who left home long ago,
Then in the time of trouble,
We go back to the one who loves us so.

Look at the war clouds
That are gathered,
Over these countries across the sea,
Lets strike out, like our proud fathers,
And help to make it a land of the free.

DUST ROSES FOR MILDEW

College Station, July 14—Mildew on roses may be controlled by spraying with bordeaux mixture by dusting the bushes with a good coat of finely ground sulphur.

Sadie Hatfield, extension specialist in landscape gardening, says that because some home gardeners object to marring their plants with yellow dust, it now is possible to obtain in some places sulphur which has been dyed green.

The symptoms of mildew, which is encouraged by excess moisture, is the grayish-white appearance of the leaves. They look as though they had been

dusted with flour or ashes, and curl up and eventually die. Buds often fail to open and if they do open the blossoms are malformed. Some varieties of roses have strong resistance to mildew while others, like the Dorothy Perkins for instance, are very susceptible to it.

Shade and the sprinkling of water on the leaves encourage attack in years of normal rainfall. Infection also is encouraged by growing susceptible varieties near resistant varieties.

**5 Points To Watch
In Your Home**

Does your home need work on it to restore its original beauty and strength? You had better check these and other points. These repairs can be made at reasonable cost.

1. The Chimney. If your home has a chimney it would pay to check it.
2. The Side Walls. The walls may need straightening up and repairing in order to be durable and to protect you from both heat and the cold.
3. The doors—keep them in good shape.
4. The windows—keep them properly adjusted and screens on both the doors and windows.
5. The Roofing—Keep it properly repaired and painted and thus avoid leaks.

We would be pleased to make you estimates on any building or repair needs you may contemplate.

COKE COTTON FARMERS MAY DISPOSE OF ACREAGE

It is permissible for Coke county cotton producers to dispose of cotton to comply with the supplementary cotton production in line with the reduction in line with the retention sheets, Clarence N. Webb, chairman of the Coke county AAA committee, has announced.

This is made possible, Mr. Webb explained, by the recent amendment to the 1941 agricultural conservation program which provides that acreage will not be considered as planted to cotton if the cotton is disposed of before reaching the bolling stage or within 10 days after notice of the seeded acreage is given, which is later.

"Under no circumstances, however, may a cotton producer receive cotton stamps for reducing more acreage than he signed on his original intention sheet on the cotton stamp program," Mr. Webb pointed out.

"To make this ruling clearer," Mr. Webb said, "assume, just for illustration to bring out my point, that a cotton producer has a 1941 cotton allotment of 50 acres, planted 50 acres in 1940 and to receive cotton stamps, indicated a reduction of 2 acres. This would permit 48 acres to be planted to cotton for this year. However, when the cotton acreage was measured, he showed 49 acres planted. He would be allowed to dispose of 1 acre to come within his intended 48 acres but he would not receive cotton stamps on more than 2 acres since this was the amount signed on his original intention sheet."

Under the original definition of cotton, the acreage of cotton disposed of below the acreage of cotton disposed of meant acreage allotment would still be classified as acreage planted to cotton.

The amendment also provides that if cotton is seeded but does not reach maturity, the smaller of (1) the acreage seeded to cotton, (2) 3 acres, or (3) percent of the 1941 cotton will be considered as having been planted to cotton. This provision was made, the AAA official pointed out, so that farms will not show zero acres of cotton when cotton was actually seeded.

The new amendment also permits producers to dispose of cot-

Honored At Post Nuptial Shower

Mrs. Gene Keeney was honored Wednesday with a post nuptial shower. The affair was in the form of a tea and was held on the Walter Modgling lawn. The hostesses were Miss Iva Dell Modgling and Mrs. Curtis Smith, Mrs. Walter Modgling, Mrs. W. W. Collier, Sr. A color scheme of yellow and white was carried. The tea table was covered with a yellow cloth and punch was served from an ice punch bowl surrounded by the marigolds and daisies. Each caller was presented with a tiny old-fashioned nosegay of marigolds.

Gifts were sent by Mmes. Burney Henson, R. L. Hayley, Jack Dixon, Wayne Lowry, J. N. Tannehill, J. Sandusky, M. B. Lloyd, Eddie Hallmark, I. M. Cumbie, Ollie Hallmark, G. T. Hogg Cecil Schultz, W. O. COTTON INSECT CONTROL

By COUNTY AGENT H. E. SMITH

In view of the fact that the cotton crop in the country is late this year due to weather conditions, prospects for a good crop is evident provided timely precautions are taken in control of insects which also promise to be numerous due to the weather conditions.

Two of the principal steps in control if insects in cotton are 1. GOOD CULTIVATION: Keep the crop as clean as possible. 2nd Keep informed on insect conditions in your cotton fields. The place to look for cotton insects is in the field and on the plants.

Cotton Flea Hopper

The cotton flea hopper is the first cotton insect to make its appearance in the new crop. To control this insect;

1. Examine weekly the terminal buds, beginning when cotton plants have six to eight leaves.

2. If flea hoppers are present in damaging numbers, small blackened, dead squares less than one-quarter inch in size will be observed, also young flea hoppers in the terminal buds will be seen.

3. Dusting should be started when flea damage is observed on one plant out of ten consecutive plants examined, or when 20 flea hoppers are present on the terminal buds of 100 consecutive plants.

4. Use 10 pounds of dusting sulphur per acre applied early in the morning before the wind rises, regardless of dew. This rate is sufficient for small young cotton. Large cotton requires 12 to 15 pounds per acre.

5. Sulphur should be applied at weekly intervals until squares one-quarter inch in size are numerous. Sulphur will continue to be effective if not washed off by rain, for one week.

6. Two to three dustings should set a crop of squares. More dusting may be required if showery weather prevails.

7. Sulphur dust will kill young flea hoppers within 24 hours after applying if not washed off by rain.

8. Flea hoppers usually attack young, rapid-growing, tender cotton, and are not so likely to be destructive on slow-growing or heavily fruited cotton.

Boll Weevil

1. Examine cotton carefully and frequently after first squares appear, for punctures, which indicate presence of boll weevil.

2. Ordinarily when 10 per cent punctured squares are found in the field poisoning to control adult boll weevils should start.

3. If this condition is found the farmer should immediately consider the following points:
a. Determine the fruiting conditions of this cotton. Cotton should be fruiting freely with good indications of continued fruiting for the next two or three weeks.

b. Carefully observe weather conditions; rains or showers within 24 hours after an application will wash off most of the poison and render it ineffective, thus requiring an extra dusting as soon as possible.

4. Hot, dry weather helps to control Weevils.

5. Three applications of calcium arsenate at 5 day intervals at the rate of 5 pounds per acre will usually result in setting a crop.

6. The killing power of calcium arsenate on boll weevils is effective for only five days after dusting, regardless of how white the cotton leaves are from the previous dusting.

7. Sometimes it is necessary to make a late application to protect young bolls and this is particularly true if weevils are migrating from adjacent fields.

Cotton Bollworm

1. Examine small squares and

terminals for eggs and newly hatched worms during early July. The finding of eggs and young bollworms should be a signal for prompt action in controlling this pest. Newly hatched young bollworms are readily killed by dusting, where as old bollworms, especially after they enter the boll, cannot be killed.

2. Bollworms are attracted to rapidly growing succulent cotton, and it is in these locations where small worms are first found and where damage is more likely to become severe.

3. In such fields, applications of calcium arsenate dust at the rate of 8 pounds per acre at 5 day intervals should be made immediately.

4. If bollworms are appearing in a distinct brood two applications should control the brood.

5. Timeliness in making applications, poundage of poison used, and its application by means of a machine having a nozzle over each row are important factors in successful control of the cotton bollworm.

In Poisoning Cotton insects the following instructions should be carried out:

1. Suitable dusting machinery should be used. This may consist of a tractor attachment, a power cart duster, tractor cart duster, cultivator duster, or, for extensive planting, airplane dusting.

2. When planning to dust, the grower should consider the capacity of his cotton to put on fruit after insects are controlled.

3. It seldom pays to control insects where cotton would not produce more than 1/4 bale per acre, if no insects were present.

4. Make application early in the morning when the air is reasonably calm regardless of the presence of dew.

5. Direct nozzles down over each row in order that dust may be forced through the plants.

6. Repeat applications if rained off within 24 hours.

7. When cotton flea hoppers and the boll weevil are both causing injury at the same time, a mixture containing 5 pounds of calcium arsenate and 5 to 10 pounds of sulphur, depending on the severity of the flea hopper damage, will be effective against both insects. This mixture should be applied at the rate of 10 pounds per acre for a medium infestation and 15 pounds for a severe infestation.

8. When protecting against boll weevils, and there is an imminent prospect of bollworm damage, the use of 8 pounds of calcium arsenate per acre will protect the cotton against both boll weevils and boll worms.

9. In general, infection counts

should be made in each separate block or cut of cotton. In large fields one point should be selected for making counts to each 25 or 30 acres. Actual infection counts should not take more than 15 or 20 minutes at a point.

10. If calcium arsenate is used to control weevils or bollworms, the same treatment will control leaf worms.

11. Consult your County Agent for further detailed information.
