Bronte Braves have two games coming up here in the next few days, with a softball game scheduled with Sterling City tonight (Thursday) and a baseball game with St. Joseph Hawks of San Angelo Sunday. Both contests promise to be thrillers, according to manager Gilbert Basuez.

The Braves lost a tight opening game last Sunday, 8-7, against Ballinger. Basquez said the team felt like it was a moral victory even though they did come out on the short end of the score. Since predictions had Ballinger beating the locals by 10 to 20 points.

The Bronte baseballers still need some contributions to buy balls, bats and other necessary equipment, Basquez said. Contributions may be left at The Enterprise office or handed to Basquez.

County Agents News Column

By STERLING LINDSEY

The screwworm situation looks good as we go into one of the year's more critical periods. One missed case could be costly at this period of the year.

To date the number of cases found has been low. And most of the cases reported were found in the Valley area of the State. However, one case was found as far north as McCulloch County. We had several samples submitted from Coke County. All have been declared non-screwworm to date.

Insect prevention and control

programs have always been good. Now that we are ahead of the screwworm, good management practices will help us to stay ahead.

Hog numbers in Coke County are way down from a few years back. But, we still have some interest in swine in the county. Wilson and Terry Frank Bryan, on the river west of Robert Lee, recently purchased several head of fine Duroc breeding stock. They have had some very good hogs in the past and will probably produce some top animals in their new venture.

The animals they purchased were from an SPF (specific pathogen free) herd. This means they were reared in a controlled environment and are free from certain diseases until such time as they are exposed to these certain diseases. There are four of them—virus pig pneumonia, atrophic rhinitis, transmissible gastroenteritis, and swine desentery. Being able to control these four diseases does not mean the hog man's troubles have ended, but a lot of complicated problems were eliminated through the technique used to secure SPF herds.

Number of hogs and pigs on farms in ten corn belt states March 1 totaled 39,61,000 head according to Crop Reporting Board. This is a decrease of 5 percent from a year earlier. Animals being kept for breeding purposes in the same area decreased by 12%.

Read labels on all packages of agricultural chemicals for safety and proper usage. Keep chemicals out of the reach of small children and burn or otherwise dispose of empty chemical containers in a safe manner, advise entomologists of the Texas Agricultural Extension Service.
