New Cold Front Is Due to Arrive Here This Afternoon

Eastland County braced for another "barther" today in the wake of a cold front which dropped temperatures here to 14 degrees.

Last night's low was 15 degrees and the low Tuesday night was 14.

Temperatures did not rise above 26 degrees here yesterday and at 8 this morning the reading was a cold 25 degrees.

Icy conditions on streets here were greatly improved Thursday morning, but the United States Weather Bureau predicts the new cold front should hit the county between 3 and 4 p.m. today. The Bureau predicts possible rain, sleet and snow.

Despite the fact that temperatures did not climb above 26 degrees here Wednesday there was some thawing caused by sunny conditions. Highway Department officials reported most highways clear now, but warned of icy conditions on bridges and urged extremely careful driving.

Southwestern Peanut Growers Assoc. Has Remarkable History Since 1940

Southwestern Peanut Growers Association, with headquarters in Gorman, has played a key part in making the peanut industry in Eastland County and the entire southwest the huge venture it is today.

SWPGA was formed at Brownwood in 1937 by a group of leading producers for the purpose of enabling producers to more satisfactorily market their peanuts. From this beginning, permanent headquarters for the organization was planned and constructed in Gorman in 1940.

Charter directors responsible for the foresight, leadership and organizational ability necessary to incorporate and charter included W. B. Starr of Cisco, G. R. Sandberg of Pearall, the late T. D. Robinson of DeLeon, M. M. Miller of Arlington, J. D. Sargent of Tolar and J. E. Britte of Pleasanton. Britte still serves as a director.

The Association was organized and chartered without capital

stock and operated at the outset on the basis of loans obtained through the Houston Bank of Co-operators. Shortly thereafter, a contract was obtained with CCC allowing the Association to borrow unlimited funds with which to make the peanut price support program available to all Southwest producers. Under this plan, peanuts placed under loan and pledged to the Association served as

collateral for the CCC loans. Association by-laws were originally compiled to represent the wishes and best interest of the producers. From time to time amendments to these by-laws have been made in accordance with the wishes of the voting membership. Present by-laws provide that the Association business is controlled by a board of directors comprised of seven grower-elected directors, each serving a three year term. Official members of the Association elect the directors for grower districts. Present directors serving producers include E. A. Walker of DeLeon, president; Jesse Leach of Holdenville, Oklahoma; D. B. Warren of Gorman, secretary-treasurer; J. E. Britte of Pleasanton, T. G. Hedley of Wewoka, Okla., Barton Scott of Binger, Okla., and Johnnie Bollins of Granbury. Rose Wilson is manager of the Association and has served in that capacity since 1956.

Southwestern Peanut Growers Association operates in Texas, Oklahoma, New Mexico, Louisiana, Arizona, Arkansas and California.

Watch for the announcement. It is something that will be of benefit to all citizens in the Ranger area.

More Than Thousand Are Assisted By HD Agents

The annual report of the Eastland County extension agents shows a total of 1,080 persons helped directly and indirectly by extension agents in this county in 1960.

There are 125 Home Demonstration women and 603 4-H girls who received direct help from the Home Demonstration agents in the Home organized club work. Five hundred telephone calls, 1,900 bulletins, 26 radio programs and 60 newspaper articles were means by which information was passed on to the people in the county not able to be in organized clubs.

Among the above number 65 women and girls were trained by the H. D. Agents or leaders trained by the agents in advanced clothing and semi-tailoring work-

shops. Out of these workshops emerged beautiful dresses suits fashioned by accomplished seamstresses 4-H girls trained by the assistant agent made a total of 100 garments.

Three hundred and fifty shrubs and 150 trees were planted by Eastland County citizens according to Extension recommendations. Twenty-five outdoor recreation areas were built.

Four-H girls planned and prepared 1,574 meals for the 4-H families; 8,673 pints of vegetables and fruits were canned and 5,520 pints frozen by women and girls of the county.

These are a few of the ways in which people can get aid and are helped by the County Extension Service.

ABOUT YOUR HEALTH

The supersonic speed of modern life is eating us one of the most vital ingredients of good health—sleep.

Twenty years ago people got plenty of sleep and were better off for it, because sufficient sleep is irreplaceable if denied. People knew about fusion in those days, but it was the hook and line variety, rather than nuclear. Things have changed...

Say you stay up for 20 hours a day. If you follow this routine for a week or so at a time, first thing you'll notice is your hands jumping from nervousness. A dull ache will begin gnawing at the base of your skull. You'll be sick and indifferent toward food.

You'll be quarrelsome—projecting casual remarks all out of proportion. It will sound like an insult when someone says hello. You might think a good night's sleep will fix you up. Maybe it will—on the surface. The nervousness might leave you and the headache might disappear. It could be that a single night of sleep will give you the sweet disposition that was formerly your grapes.

But it's all on the surface. During the stretch of sleeplessness your heart may have been strained, your blood pressure increased, your digestion upset.

Sleep gives the human body a chance to recover from the fati-

gued state of one trying day before the onset of the next. And it has to be natural to be beneficial. That's why sleeping patterns are undesirable as a steady diet.

A few hints may help you get a better night's sleep. Do your heavy thinking before supper. Make it a rule that after the evening meal your brain gets a rest. Subdue the lights around the house. Lights keep you alert, besides being tough on the power bill.

Get lots of fresh air. Sitting quietly on the porch might encourage the relaxation so necessary for dropping off into sound sleep. So might a short drive—if you avoid main traveled roads.

Reading light fiction is also relaxing, but stay away from the zory private eye stuff.

Develop a bedtime ritual, the more sedate the better, to condition your mind for bed. And when you do retire, deliberately try to wash out those random thoughts that "staid" into your mind. (A weekly feature from Public Health Education, Texas State Department of Health.)

Milk Production Outlook Good For Sixty-One

Increasing population and the government price support program are expected to keep milk production in 1961 in spite of expanded production in 1960 when it exceeded 1960 by one billion pounds or more.

The North Texas Producers Association, through its publication the North Texas Dairyman, has made this appraisal on the basis of 1961 outlook about like this:

1. In 1961 it appears that total milk production will show an increase of about one billion pounds over 1960 and will be at a record high level.

2. Recent declines in beef cattle prices and their expected continuing decline in 1961 indicate higher milk production.

3. Due mainly to an increasing population and to the government price support program milk prices are expected to remain stable. The key to any improvement in milk prices is the level of price supports, to be announced in April. Through March of 1961 it appears that prices will average slightly higher than they were in 1960.

4. Per person consumption of milk continues to decline. Consumption of milkfat has continued its long term decline but consumption of non-fat milk solids has increased.

5. The number of dairy farms has declined about 50 per cent during the last 10 years but the volume of milk produced on such farms has increased about 15 per cent during the same period. This increase is due to higher production per cow and larger herds.

"Dairy farmers in Texas," the North Texas Dairyman points out, "are now undergoing significant adjustments. It is estimated that an investment of about \$75,000 is the minimum needed to operate an efficient dairy farm at current prices. This will, no doubt, continue to increase."

"It boils down to the fact that dairy farming will be more and more specialized, and less of an in-and-out occupation for other farmers or for those living and working in town who try to dabble on the side. It also boils down to the hard fact that those who attempt to enter dairying on a shoestring or those now in dairying who cannot operate economically

and efficiently enough will not succeed and will not be in the business of producing milk."
