# Benefits Are Widely Spread With Widespread Power

The power line which carries electricity over the countryside is bringing the benefits of industrial development to small communities as well as large cities.

When an equal power supply is commanded by both, the production efficiency of small, decentralized establishments matches that of the large metropolitan factory. Moreover, with its freedom from the high costs imposed by congestion, the small community factory can even surpass the large city factory in economical manufacture.

This is the opportunity which the widespread distribution of electricity power has opened . . . an opportunity which the West Texas Utilities Company has made available to 125 progressive West Texas cities and towns served from its 2,500 mile transmission line system.

Do you know that your increased use of Electric Service is billed on a surprisingly low rate schedule ... and adds only a small amount to your total bill?
