82-Year-Old Texas Ranger Writes a Story

By FRANK DALTON Ex-Texas Ranger

(Copyright, 1932, by the Home Color Print Co.)

A FTER the battle of the Little Big Horn, where the gallant Custer and four companies of the 7th Calvary were killed, the Sioux Indians got scared and crossed over into Canada. That just about ended the fighting along the northern border, therefore my regiment was ordered to Texas to assist in subduing the Comanches and Apaches who had become pretty bad west of the Pecos river. Our regiment was scattered among the posts of western Texas, with regimental headquarters at Fort Concho, just across the Concho river from San An-

There were still roving bands of young Indian bucks that committed depredations now and then, but the Comanche tribe, as a whole, had been put on reservations at Fort Sill, in the Indian Territory, where they were kept under guard by U. S. soldiers, which meant that their wholesale depredations had practically ended.

With so little fighting, army life became irksome, and in the spring of 1877 I quit the army and joined the Texas rangers in the hope there would be more action and more excitement for a young man of my venturesome nature. And so there was.

The Texas rangers, organized as a kind of rural police, had been mustered into State service for several years. Their duties were to enforce a semblance of law and order along the Mexican border as well as to keep down Indian raids and depredations as much as

Outlaw Bands Well Organized

In the early days outlaw bands were well organized, and horse and cattle stealing were done on a large scale in

Texas. Stock stolen in Mexico, after passing through several hands, would finally wind up in Wyoming or Montana. Other stock, and sometimes whole herds at a time, would be stolen from ranchers on the Texas side and run into Mexico. Big herds of cattle were being driven over the trail from the ranges of Texas to the shipping

points of Kansas, and the cattle thieves were a constant menace to these herds all along the way. Their usual plan of operation was to stampede cattle at night. frequently kill the men on night herd. and then round up as many of the cattle as possible next day and rebrand them. Guarding so vast a territory was mostly up to the rangers, and considering how few there were of us, we had a pretty

Another class we had to deal with was the train and bank robbers who, when driven out of the more thickly populated States of the East, invariably came to

Most of these crooks and outlaws form other States picked out Brewster county as a base for their nefarious operations. Brewster county takes in most of what is known as the "Big Bend" country, is ideal for outlaw dens and robber's roosts because of its rugged topography.

Fort Davis and we got word to be on shooter (I wore two) as that was the the lookout for a bunch of Mexicans and most reliable pistol of those days, and white men who had robbed a train near the one used by the army as well as by Deming, New Mexico. It was reported that they had crossed into Texas and were headed for their hide-out in the Big Bend. So six of us rangers (we were always short-handed back in the

"Rode out to head off this band of outlaws."

seventies) saddled our horses and rode out to head off this band of outlaws. The rangers were all armed with Winchester saddle guns, but I still stuck to my army gun, which was a single-shot breech block 45-70, Springfield Carbine, and although slower perhaps than the Winchester repeater, was more dependable since there was no danger of it 'jamming." All rangers, however, were

Trailing Train Robbers equipped additionally with the long bar- one of the few "two gun" men I ever Our ranger company was stationed at rel single action Colts 45-calibre six- knew). men on the frontier. You did not have to kill a man with it-the shock of the big bullet would stop him.

But, getting back to the New Mexico train robbers, we struck their trail just

east of where the town of Alpine is now located and followed it for two days in a south-westerly direction, toward the roughest part of the Big Bend country.

A Pitched Battle

We finally came upon the bandits while they were eating dinner, about two miles from the Rio Grande river, in a country of canyons and mountains. Evidently thinking they had evaded pursuit and were safe, they had failed to put out a guard and we took them by surprise. There were ten in the

gang, all heavily armed. When the smoke of battle had cleared away there were six dead outlaws and two, desperately wounded, died later. Two of the outlaws surrendered, one of whom was the leader of the gang, a big pock-marked Mexican by the name of Martinas Labro; the other prisoner was a white man by the name of Frank Denson, (who was

Our casualties were one dead and two badly wounded rangers. I happened to

be one of the two wounded and it took me nearly a year to get patched up and ready for duty again.

Well, that was a ranger's life back in 70's and early 80's, and it was a great life if you didn't weaken. A ranger needs not only to be cool and courageous but he must have patience and physical endurance-must be able to ride horseback 48 hours without sleep or anything to eat. We had some tough and some smart law breakers to deal with. Many of these tough ones could ride as hard and shoot as straight as a ranger.

Politics, Even in Those Days

Once in a while a cow town would get out of hand and, when the local law officers could not handle the situation, the rangers would be sent for; we seldom failed to "clean up," run the tough ones out and restore order. There were political factions and elections in those days the same as now, and your frontiersman was usually a hot-head when it came to politics and a great booster for his party or candidate, which meant more work for the rangers. Whisky always flowed like water and the candidate who would "set 'em up" the oftenest was usually sure of election. Dance and gambling halls ran wide open day and night with no latches or locks on the doors.

I am 82 years old-my step is feeble and my eyes are dim-and it will not be long now until I shall be mustered before the Great Commander, but as ! lock back on nearly seventy years of life on our western border, a large part of it as a soldier. Texas ranger and peace officer, I am content and proud of the small part I have played in the winning of our glorious Southwest.

O. Henry, Author, Once Lived on a Texas Ranch

By AUSTIN CALLAN

(Copyright, 1932, by the House Color Print Co.) •TN 1881 or 1882 Sidney Porter (better known as O. Henry in the literary world) came to Southwest Texas from North Carolina. He was then a tallow-faced boy of twenty; his health had broken down while working as a clerk in a North Carolina drug store. His father knew R. M. Hall, who owned a ranch in La-Salle county, Texas, and Mr. Hall, upon ranch, with the belief that the open range and fresh air would restore his health. Some of the old timers around Cotulla, Texas, recollect the day Sidney Porter arrived there.

'He is Dick Hall's new bronco buster." a bystander remarked, as Porter stepped from the train and entered a buckboard for the Hall ranch, reckon he's got a wallet full of wild west literature and a pop gun."

"Nope," put in a cowboy, who had

more sense than that. The kid ain't no rider for nobody. My guess is he's going to teach them cows on the ranch how to crochet or sing in the choir. He couldn't stay on the hurricane deck of a wild cayuse any longer than a towel would stay clean in a cow camp. If he tries 'Rowdy' or 'Magrueder,' either one of them broncos, he'll sure send the price of liniment sky high."

Never Rode a Bucking Bronco

But O. Henry never tried to ride a hearing of the physical condition of bucking bronco, nor throw a lariat at a young Porter, invited him to come to steer's prong, nor point a herd on a long Texas and accept a position on his trail. Mr. Hall gave him a little dun pony that was perfectly gentle which he rode as long as he stayed on the ranch. Sometimes he attended round-ups, helped to hold the "cut" and drive stock back to the home range, but that was about all the ranch work he ever did. His chief occupation was to get well and go to town for the mail. Some months after his arrival on the ranch, he made a trip to the border, at Laredo, and while there became very much interested in the Mexican people, been sizing up Porter, "Dick Hall's got making the remark that it was a race

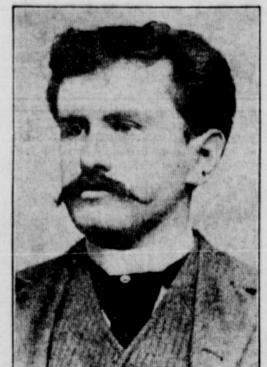

Photo of O. Henry, when he lived at Austin, Texas, in 1896.

talented and more romantic than the

It has been stated by some biographers that O. Henry once owned a cattle ranch in South America, but that is erroneous. He went down there as a refugee, after his indictment at Austin, Texas, but his entire ranch experience was on Dick Hall's ranch in La-Salle county, Texas. There he tested his memory, committing portions of the Arabian Nights to "heart," and also learned the names of different brands of chewing tobacco used by the cowboys. He went to Fort Ewell often for I think he moved to Sherman.' mail, and the cowboys made him their purchasing agent for little things they needed out of the stores.

Porter Moves to Austin

The Dick Hall ranch was located at Green Branch, then a wild portion of the old Southwest. Dick was a brother of the famous Captain Lee Hall whose name is known to many Texans. After selling his ranch and moving away, he was elected State Comptroller, and while holding that position persuaded Porter to move to Austin.

In speaking of the brief residence of O. Henry on a cattle ranch, Mr. W. A. Kerr, of Cotulla, says: "My father had a store and was postmaster at Fort Ewell. Porter would come for the mail and spend the day with us. He was a nice, quiet gentleman. We afterwards moved to Cotulla and when Porter left this country he spent several days at our home and gave my sister a pacing dun pony which he always rode. That was the last time I ever saw him. It was in the latter part of 1883, or early part of 1884, that R. M. Hall left here and

A farewell trip was made by O. Henry to the Rio Grande border just before he left the Hall ranch. The fascination of that region, in those free wild days, called to him as the shrine of Guadalupe calls to the faithful Indian patron. Life of the Mexican people appealed to his unconventional nature-he saw much to admire in their music, art, songs, and the dark, flashing eyes of pretty senoritas. Some of O. Henry's best stories have a background of Mexican romance and ad-

Facts About Run-Off Water and Soil Erosion

(In Cooperation with Bureau of Chemistry and Soils, Bureau of Agricultural Enginearing, U. S. Department of Agricul-ture, and the Agricultural Engineering Department, A. & M. College of Texas).

HIS project, which has been under way five years, has for its purpose the study of the factors influencing runoff-water losses and soil erosion and the effect of runoff and erosion on crop production. The factors contributing to run-off water losses are being studied on control plats of 1/75 acre in area, from which the water and soil losses are caught and measured in concrete tanks placed at the lower ends of the plats. The efficiency of terraces having different slopes and spacings in preventing runoff and the effect of runoff losses on crop production are being studied on field areas results a number of the field areas were constructed in triplicate in 1930.

During the first year of the experiment, 1926, the annual rainfall was 15.34 inches above normal and during 1927, 1928, 1929, 1930 has been below normal, 5.69 inches, 1.94 inches, 6.79 inches, and 2.81 inches in the respective years. The total annual rainfall, however, apparently does not influence the from a fallow cultivated plat with the amount of runoff so much as does the character of the rainfall. Rains falling torrentially results in greater loss of both soil and water than those which fall slowly. On May 10 a rain of .91 inch, falling in one and one-half hour, produced a runoff of .39 inch on a control plat with a two per cent slope, while a rain of 2.42 inches, which fell in 15 hours on October 6, caused a runoff of only .06 inch on the same plat. The soil losses were in approximately the same proportion as the water

Rapidity of Rainfall Important Factor

Although rapidity of rainfall plays an important role in determining the amount of runoff and erosion, there are other factors which exert an influence of approximately ten acres in size. In of considerable importance. Certain order to increase the reliability of the conditions, especially the physical properties of the soil together with the cultural treatment, tend to minimize or to increase the runoff losses, and these conditions vary from year to year. A fallow uncultivated plat with a 2 per cent slope has had an average yearly loss of 6.61 acre inches of water and 18 tons of soil as compared with 5.19 inches of water and 15 tons of soil

same slope. A more striking difference in runoff losses is caused by the vegetative covering of the soil as is indicated by the average annual losses from plats of 2 per cent slope having the following treatment: Buffalo grass, 1.79 inch;

fallow cultivated, 5.19 inches. On the field areas the different systems of terracing have greatly influenced the amount of water lost and this in turn has had a pronounced effect upon yields. This year the runoff loss from an area having level terraces with a two-foot vertical spacing was .69 inch as compared with .73 inch from an area having contoured rows but no terraces and 1.49 inches from an area having the rows running with the slope. An area which had level terraces and was diked to hold all the water that fell on it produced 281 pounds of seed cotton per acre; a similar area where 2.52 inches of water were diverted onto it from another source produced at the rate of 348 pounds of seed cotton per acre, while an area with the rows running with the slope produced only 25 pounds per acre. The fruiting period of cotton was exceedingly drouthy this year, and these results indicate the

practical value of conserving as much ditional water on to it. of the rainfall as possible.

Diverting Run-Off Water

Excellent results have been had with alfalfa by diverting runoff water from other areas onto the alfalfa land. This milo, 2.29 inches; cotton, 3.43 inches; year a field of alfalfa which received 1.96 inches of water in addition to the yearly rainfall produced at the rate of 2304 pounds of hay per acre. Another field which had exactly the same treatment, except that it received only the water that fell on it, produced 371 pounds of hay per acre. Thus an increase in yield of 1933 pounds of hay per acre was brought about by the addition of 1.96 inches of water above the amount of rain falling on the area. These results show the feasibility of diverting onto alfalfa fields water from roadways and from lands that have runoff. Under the conditions obtaining at the Spur (Texas) Station, this is the only way that alfalfa has been grown successfully, and, no doubt, a similar practice on most of the upland soils of West Texas will need to be followed in order to grow this crop. At no time has any damage been done to either cotton or to alfalfa from holding all of the water on the land or from diverting ad-

It is of interest to note the effect on runoff of terraces with and without fall. During the period of the test an area having level terraces with a twofoot vertical spacing has had an average yearly runoff of .67 inch. In another field where the terraces have a fall of three inches per 100 feet along the terrace, the runoff has averaged 2.67 inches per year. The runoff figures have stood in approximately the same proportion in each year of the test and leave no doubt that level terraces are preferable to sloping terraces in West

The satisfactory results obtained on ten-acre areas by using waste water to supplement the rainfall have led to an extension of the project to include a 120-acre tract of land. The runoff water from a 1200-acre watershed formerly drained across this tract a distance of one mile. A system of level terraces in which each terrace has one end open has been constructed so that this water must now travel a distance of six miles back and forth across the land before the outlet is reached. Measuring devices have been placed so as to measure the water flowing onto and off the

BACK TO THE FARM MOVEMENT

The back-to-the-farm movement in Texas is assuming substantial proportions, and promises to be of help in solving the problem of unemployment and in bettering the economic condition of thousands of people in this State.

According to the agricultural editor

has made a survey of the drift from city and town to the country, during the spring just passed 2,477 families moved to farms in 102 counties in Texas. More than 50 per cent of the families returning to the land indicated they expected to remain permanently on the farm. The agricultural editor estimates, on the basis of the figures he has gathered, that approximately 74,000 persons of a leading daily paper of Texas, who will during the year 1932 go from urban

to rural districts. This is the largest movement from the city to the farm that this State has ever witnessed. Hitherto the drift has been strongly from farm to the city. In Southwest Texas the average movement to the farm last spring was 50 families per county. In East Texas the average was 39 families per county.

The return of many landlords to their farms also is noted in the survey.

-PAGE 2-

TEXAS QUAIL LAW UPHELD

The Court of Criminal Appeals recently rendered an opinion which will doubtless have an important bearing on the Texas quail law, and make the enforcement thereof less difficult and more thorough.

The opinion dealt with the possession of quails during the closed quail seasons. A man from southwestern Texas

had been arrested on a charge of having a quail in his possession during a closed season. The man was convicted in a local court and a fine of ten dollars was assessed against him. The man convicted contended there was no law on the Texas statute prohibiting the possession of game birds during closed seasons, and appealed to the higher court, which upheld the verdict of the lower The Cotton Market

MANY seers, savants, political economists and price prognosticators are now rushing into print and telling the farmers about marketing their cotton. Some are urging the tillers of the soil to hold their fleecy staple for better prices; some advise early selling and some a gradual marketing. The man who has lived all his days in cotton regions never places a high estimate upon the intelligence of one who undertakes to forecast the gyrations of the cotton market. In the South most of us know that a human being can guess as accurately at the direction a flea will hop as at the turns the cotton market will take. We all know the market will go up or down, or remain as it is, but further than this no man knoweth. When a grower markets cotton, he takes a chance on the wheel of fortune; an honest, legitimate chance, to be sure, but a chance just the same. . . .

Seventy Years of Freedom

Seventy years ago, September 22nd, President Abraham Lincoln read to his cabinet a proclamation giving freedom to the negro slaves of the Southern States. The proclamation followed the battle of Antietam, one of the bloodest contests of the great internecine strife. The battle was a draw, though Lee won a technical and moral victory. President Lincoln had waited for a decisive victory to issue his proclamation abolishing slavery, but the decisive victory had not been gained and the people of the North were impatient. Thursday, September 22nd, marks seventy years of freedom for the blacks. The negroes have not made the progress expected, but they have moved forward somewhat. Seventy years after the war finds the people of the South still entertaining the feeling that their rights were invaded and they were wronged, but no son of the Southland envies the black man his freedom, and there are few who would see the chains of slavery forged again without a vigorous protest. . . .

Yes, It Was a Famous Victory

Thirty-four years ago great excitement prevailed throughout our land. War had been declared against Spain earlier in the year, and as our country had not tried its hand at war for a long time, the issue for a time was doubtful. We had a very small army and a very poor navy, though we boasted much of the great battleships, Iowa false standard of honor, and too weak and Oregon. On May 1 the glorious to stand being called a liar, and so news came that Dewey had won a wonderful victory in Manila bay. He had in fact whipped and burned a few obsolete Spanish vessels. A little later on Teddy Roosevelt made his great charge up San Juan Hill, and then Schley put the fleet of Cervera out of commission, and the war was over. Following the Schley and Sampson over who was in destroyed. Another shock came when Bay, disposed of a house that had been given him by his grateful admirers. But thirty-four years have passed. Samp-

ter, Dewey and Cervera have joined the great majority and Americans have forgotten that we were ever mad at Spain. In truth, we were not very mad at Spain, and we are not sure we did anything worth while when we freed Cuba, annexed Porto Rico and took charge of the Phillippine Islands. But, like the affair at Blenheim, it was "a famous victory."

Cotton picking time is with us again. This means that the laws against gambling will receive many infractions during the next few months. The sons of Ham always take dice with them when they go to the cotton patch, and the dice always get them into trouble. No matter how heavy the fine or how near the officers, Sambo will try his luck with the dice when he gets to the cotton patch. I hardly ever take a position on a public question, but I have no hesitation in saying that the law against negroes shooting craps ought to be repealed. The Senegambians get too much fun out of the game to be denied the privlege of playing it, and it's such a slight offense against the State. Sometimes I am persuaded that negroes do not have to learn to play the game of craps, but know it intuitively. Quite frequently you find pickaninnies who cannot count up to five, who know at a glance when "seben or eleben" is thrown.

. . .

Foolish Standards There are foolish standards of bravery and loyalty in every land. Some years ago the great Japanese general, Nogi, the military genius of Japan, cut his throat when Emperor Mushitito died. Had Nogi continued to live after his emperor passed away he would have been dubbed a coward, but because he cut his throat before the burial of the emperor his name will glitter as a hero upon the pages of Japanese history until that day in the distant future when the Japanese will erect a new and better standard of honor and heroismthen he will be dubbed a weakling, too frail to stand against a senseless, cruel custom. We look with pity and horror upon a civilization which permits and vields to such a standard, but upon close examination we find that some of our standards of honor and bravery are just as foolish. The papers report that a Texan called a neighbor a liar recently, and that the neighbor shot him to death. Good sense would have prompted the man who was called a liar to prove that he was not a prevaricator, if he was not, but he was a slave to a he committed murder and destroyed himself forever.

Mosquitos

Sorry to have to say it, but mosquito time has come again. But keep it in mind, dear reader, that there are moswar there was a great squabble between quitos and mosquitos, and it depends altogether on which particular tribe of command when Cervera's ships were the family bites you as to the malady that will prey upon your frame as a Admiral Dewey, the hero of Manila result of the bite. The Anopheles mosquito carries malaria in its bill, while the Stegomyia dispenses yellow fever-that is the female Stegomyias son, Schley, McKinley, Roosevelt, Shaf- do. An ordinary mosquito does noth-

ing more than destroy your religion. fodil, the dandelion and the dahlia all By keeping close watch on your mos- in the shade. quito visitors you may easily know what malady you are to suffer from and prepare for the ordeal. The Anopheles, or malaria mosquitos, have long. slender palpi and sit on your body in an angle, while the ordinary mosquito keep its body parallel with the body on which it rests. If the mosquito visitor has striped legs, it is the deadly female Stegomyia, and you will have yellow fever.

Rachel, Sookie and Dinah are now happy in the cotton patches, but deep gloom hovers over the homes where white housewives dwell. Ask one of these white housewives today what is the world's greatest need, and she will instantly say, "a mighty influx of colored washwomen who can't pick cotton."

Citizenship

I am convinced a very large per cent of Americans fail to take their citizenship seriously. Some of us take it as a joke, some as a game, and some merely as a chance to help friends or grind axes. It is difficult for us to keep in mind the duties citizenship imposes upon us. We are too prone to see in citizenship an opportunity to construct a steam roller, that we may flatten somebody we don't like. Too frequently we make of this priceless gift a weapon to slay an enemy, or a derrick to elevate a friend. The duty of citizenship is committed to each person as a trust, to be discharged always for the common welfare and the higher purpose. A ballot is to be used for the benefit of mankind, and not for the advantage of individuals. Speed the day when all of us will take our citizenship seriously-when we will study and pray that the gift may be used to promote justice, righteousness, and make our fellowmen their own levers to raise themselves to better estate.

This scribe is a true-blue when it comes to standing hitched when his political party makes a nomination. You'll be bound to admit this when I relate a circumstance or two. Texas now has a real candidate for Vice President. This candidate used to play short-stop on a baseball team that occasionally came to my home town and cleaned up with the home team. Furthermore, said candidate for Vice President used to court a girl that I was very anxious to hang around, and quite frequently I lost a date because of him. And yet, I am as strong as horse-radish for the Texas candidate for Vice President. Would it be possifor any man to give stronger proof of party and State loyalty?

erage woman spends ten dollars a sibly the little life was choked out month for beauty aids. I don't say the money is wasted, because I know the dears get a world of satisfaction out of one. I prefer to believe that the Creaapplying the aids, and looking in the tor of that little life would have been mirror after the aids are applied. But dears, it is a waste of your precious time. If there wasn't a lip stick or a rouge pot in all the world, you'd still be the prettiest things on earth and lay the tints of the rose, the blush of the is to overcome evil and do away with peach, the hues of the daisy, the daf- it. Man has done much. He has met

Another Idol Shattered

The hand of the iconoclast has been laid upon another of the country's sacred institutions, and a wonder that long cheered, comforted and bewildered mankind has passed. The government has given to the world the verdict that all kinds of divining rods are without value in locating minerals or water under ground. So the divining rods and the water witches now take their place in the scrap pile beside other wonders that were but are not.

In my section of the country we know little of any form of the divining rod save the forked switch with which wells of water have been located since time was young. All of us were taught from infancy to look with reverence upon the forked switch and to bow in lavish homage before the men in whose hands the switch would turn to mark the place where water might be found. We would have gone on so believing had the government geological survey kept quiet. The turning of the switch, the government says, is due to unconscious movements of the muscles. In tests made where water had been located by approved water witches, water was found at the same depth all around the places where the switch revolved in the witch's hands. We all surrender the water witch and his forked switch with tears of regret, but science has spoken and we must submit to the shattering of another idol.

Not for the Best

Like all other people I frequently sit in the presence of the dead and hear a good minister try to comfort bereaved ones by saying the death of their loved one was for the best. Perhaps the remains are those of a stalwart young man, full of hope and promise, and cherishing noble longings for the strife, or of a lovely young woman, thoroughly equipped for a career of love and usefulness. On such sad occasions I try to say with the minister that death was for the best, and yet my heart and mind tell me it was not for the best. I cannot believe it is best for death to come to one who gives promise of usefulness while he or she is young and strong, with the dews of youth and innocence upon the brow and eternal springtime in the heart, neither can I believe it was part of the divine plan or the will of the Creator that such a one should have died. Such a death, it seems to me, is a reflection on our civilization. It is indisputable evidence that man has not completed the task of subduing and bringing order to the earth that God assigned him. Perhaps it is a snow-white coffin, in which rests the Cosmetic manufacturers say the av- marble clay of a dimpled darling. Posthe awful diptheria. I cannot believe that God wished the death of the little pleased if it had been snatched from the jaws of death through the use of antitoxin or some other specific for the awful disease. Death of the young and strong is evil, and man's greatest duty

millions of the young at the portals of the grave and turned them back into the busy scenes of life. But man has not done all the work assigned him. Some day he will grow full-statured and far-seeing, and then he will complete the task.

When a fellow is broke, he frequently finds that he can get along fairly well with cheaper things. Once upon a time I lost my twenty-five dollar glasses, and as I didn't have twentyfive dollars with which to buy more, I was sure I was ruined. While casting about for a friend who would loan me twenty-five, I stumbled upon some glasses that could be bought for fifteen cents. Luckily I had fifteen cents, and made a purchase. I wore those glasses three years, and during the time I wore them I saw everything that was worth seeing. Come to think of it, those good old octogenarians I knew back in Tennessee, who bought two-bit specs from a peddler, could see a gray squirrel in the tallest tree, and plump the squirrel's eye every time with their old cap-andball rifles.

The gold standard is getting some rather hard knocks now from the nations of the world and it's beginning to look good for silver. Several nations have quit the gold standard, and a few of America's financiers have turned against it. But I must warn those who are trying to send the gold standard to the discard that they have tackled a man's job. Billy Bryan, Dick Bland, Coin Harvey and the writer went after the gold standard back in 1896, and it appeared for a time that we had the yellow metal pulverized, but when the votes were counted what a mess we were in. But we did make a big noise.

I, like most people, like visitors. But I want it distinctly understood that when visitors come to my den, they must come with a desire to listen and not with the hope of being listened to. I am several years behind with the expression of my views on how this government should be conducted, and how this country got in such a devil of a fix.

. . . Helping My Party

On this the eighth day of August I find myself trying to pen a few lines. but my mind is not on work. I am in the spirit of politics and am anxious to do something for my party. I have been asked for a contribution of money to help the cause along, but the depression has depressed my purse until it is thinner than the lean edge of an attenuated wafer. I would like to take he stump and pelt the enemy with sulphurous gems of oratory, but, alas, I have false teeth, and every time I attempt a flight of eloquence the manufactured molars leave their moorings and give embarrassment and humiliation. And so, feeling that I must do something for my party, I am going to write a poem, and here it is:

Go roach the Democratic mule -And give him lots of hay; He meets the Republican elephant Just three months from today. Like a warped bologna he will look When he humps him for the fray. But when he lands on Jumbo's slats, Those slats will cave away.

King Fashion, Old Fraud, Still Reigns

his sweetheart. People today are no more subservient

to the mandates of fashion than have a nice time and win the first they were back in Colonial days, when men wore velvet knee-breeches and powdered wigs done up in ribbons, and women wore hoop skirts, frizzled hair and three-story hats.

As a young man I was a slave to fashion, ever ready to obey its behests, no matter how ridiculous and exacting they might be. But as I grew older and stiffer in my joints, I became rewas mistaken, and never realized last week when, on account of the eco- a night."

rowic depression. I changed from a "What ails this family is that you

stylish cut coat and trousers, badly are long on style and short on brains." fraved and thread-bare in spots, to a suit I had bought in those plethoric ING Fashion, the most fickle and days when cotton was selling for twotyrannical ruler to afflict human- bits a pound and a dollar bill looked like

Family Wisecracks

There was not a break in this suit of clothes, besides it was made of fine allwool material. Nothing was wrong with it, though the tail of the coat was about four inches too short to be fashionable and the pant legs a little tight, short and pegbottomed. I felt proud of the suit until my family began wisecracking.

"Daddy, I didn't know you had been "I must have made a dazzling invited to a tacky party; hope you will

> prize," observed our daughter, as I came into the parlor pulling at my pant legs. "I wouldn't wear that suit to a dog's funeral, on a bet, unless the funeral took place at midnight," remarked our son while looking through the sport page of a morning newspaper. Then

"Let your daddy wear it if it pleases him. All he lacks of being a clown is bellious and flattered myself that I was a little derby hat and a pair of white through with silly fashions; however, socks. If he could sing and dance we might hire him out to some vaudeville what a strangle-hold it had on me until company for a funny stunt at a dollar

my wife had her fling:

I said, in a loud injured tone of voice, while slamming the door behind me.

Clothes-Conscious

But their caustic criticisms made me clothes-conscious and uncomfortable, and to save my life I couldn't keep from viewing myself in every show window I passed that morning. I finally slipped back home and put on my other suit and tried my derndest to look like a martyr the rest of the day.

The Prince Albert coat, celluloid collar and Congress shoes made their appearance in the Cave Creek community about the time I started courting the girls. By strict economy, hard work and sale of a bull yearling, I came into possession of all three of the above mentioned articles. My first opportunity, after purchasing this ultra fashionable outfit, to make my debut into Cave Creek's inner social circle was at a Fourth of July picnic. I must have made a dazzling appearance that morning as I came dashing up on my pony, dressed in the very pink of fashion. I tried to assume a bored expression in the presence of my admirers, though I was extremely happy, believing I was the cynosure of all eyes. I did much posing, and "showed off" in various attitudes. But it was an extremely hot day and I became more and more uncomfortable. My shoes were too tight and, to add to this discomfiture, my celluloid collar was rubbing my ears raw and the heavy suit was making we sweat from every pore. I stood it as long as I could and when the band started playing "Dixie" for about the ninth time, I slipped out to where my horse was tied and left for

Debut at Wrong Season

I wish I knew how much that toggery weighed, not counting the perspiration it had soaked up. The trouble with me, I had made my debut at the wrong season—I should have waited till hog-killing time to wear heavy winter clothing.

Styles come and go, and are out of date more quickly now than they used to be. A few months since I noted a cover design on one of America's most popular magazines, that seemed highly humorous, due to the fact that it depicted fashions back twenty years ago. But if that cover design picture had been published twenty years ago, instead of creating merriment it would have been admired and commented upon for its up-to-dateness in portraying the latest in outing apparel for men and women and the last word in private transportation. The scene on the front cover of this magazine depicted a man wearing a long linen duster, derby hat, goggles, gauntlet gloves, driving a highwheel, chain-drive automobile that cranked at the side and had no wind shield. He was accompanied by his wife, attired in a dress buttoned up to her chin, silk mits, tall hat topped with a dead bird and covered with a heavy

What changes will the next twenty years bring in styles and fashions of today? Let those answer who laugh at that cover design I have just describ-

King Fashion still sits upon his throne, laughing at the silly antics and whimsical changeability of his subjects.

For the Son of man is come to save that which was lost. Matt. 18:11.

Supreme FEEDS SUCKERS, CARP AND GARS TO GAME FISH

Several of the Texas fish hatcheries are doing quite a bit toward the protection of game fish by catching and destroying those fish which are their natural enemies. Not only are these destructive fish caught-such as carp, sucker and gar-but they are cut up and fed to game fish that are in fish hatchery ponds.

E. C. Brady, of the Heart of the Hills hatchery of Kerrville, has this year caught 825 pounds of carp and suckers. In doing this he goes out to private fishing holes on the Guadalupe river, or to any public portion of the stream, where he can find the suckers. Into these holes of water he drops two four-foot trammel nets, each 12 feet long. One is dropped across the stream, the other at right angles to it. The suckers run into the nets, entangling themselves while. with but few exceptions, the game fish swim over or around the nets.

"It is just as easy to catch the suckers in a hole 20 feet deep with a four-foot net as it is in four-foot water," Brady explained. "We never drag a net over the bottom of the stream because it will destroy many game fish spawning beds. By setting the nets and running the carp or suckers into it, none of the other fish are harmed. Last year I caught 500 suckers from one hole of water. A sucker gets its food direct from the bottom by sucking the food into its mouth. When passing over a spawn bed of game fish the thousands of eggs are sucked right in by the sucker and thus many game fish are destroyed at one time. We save the State money on feed bills when feeding gars, carp and suckers to our hatchery fish."

BRIEF TEXAS NEWS

PARIS HAS BARREL FACTORY

The Houston Cooperage and Tub Company has located a plant in Paris for the manufacture of barrels and tubs. The first truck load of completed barrels was turned out from the new plant in May.

TEXAS LEADS IN VEGETABLE SHIPMENTS

Texas in 1931 shipped 7364 carloads of mixed vegetables, California 6,141 cars, Colorado 4,207, Florida 4,195, and all other States together 9,222 cars, Texas alone accounting for almost onefourth the Nation's total.

TEXAS LEADING MARKET FOR LIMA AND PINTO BEANS

Texas is the leading market for pinto beans, baby limas and blackeye peas, and San Antonio is the leading distribution center for pinto beans and Houston for baby limas and blackeye peas, according to a survey by the Bureau of Agricultural Economics of wholesale distribution of beans. Statistics were gathered from 3,000 leading wholesalers and reflect the consumption in distribu-

HAS EDITED PAPER 56 YEARS

James C. Son, of Palo Pinto, holds the record among Texas newspaper men for continuous service as editor of a newspaper. Mr. Son began publication of the Palo Pinto County Star in 1876. He is still editor and publisher of the same paper. Mr. Son is 84 years old, but is still active both as editor and as a mechanical worker in his print shop. His paper has never missed a regular issue since its publication was begun more than 56 years ago.

TEXAS WOOL CLIP 56,687,000 POUNDS

Texas in 1932 produced 56,687,000 pounds of wool, with an average of 7.9 pounds per clip, compared with 53,360,pounds in 1931, and an average clip of 7.8 pounds, according to the United States Department of Ariculture. Texas easily leads the United States in the production of wool.

The United States as a whole produced 342,386,000 pounds of wool this means one might circle the earth 221,year, with an average clip of 7.6 pounds compared with 369,447,000 pounds last year. Besides Texas other leading wool producers this year are Wyoming, Montana and California.

BIG TURKEY HATCHERY AND PACKING PLANT

Devine, Texas, has been selected by men of experience and capital for the biggest turkey hatchery, turkey breeding farm and turkey plant in Texas. long been a question when these trees The company backing the enterprise expect a daily output of 5,000 turkeys, E. will not only raise, dress and ship turkeys of their own breeding and raising. but will buy turkeys for shipment from the farmers surrounding Devine. Several thousand acres were purchased for breeding grounds. Four 16,000 unit Peterson incubators have been purchased and 10 brooder houses, 25x125 feet, will be erected.

TEXAS' BONDED INDEBTEDNESS

Texas has an outstanding bonded indebtedness of \$4,000,000, which has been in existence for many years. These bonds are owned by six institutions and the permanent school fund. The Legislature in the early seventies authorized these bonds, the money from which was used to safeguard the Texas frontiers, maintaining a force of Rangers and preventing raids by Indians. Several times later the State issued refunding bonds to take up those issued in behalf of the frontier and renewing them at lower interest, for in the early days these bonds bore seven per cent interest.

Ownership of these State bonds preserved in the State Treasury is as follows: Permanent school fund, \$2,772,-000; permanent University of Texas fund, \$625,000; permanent A. & M. College fund, \$209,000; State Blind Institute fund, \$134,000; State Deaf and Dumb Institute, \$104,000; State Hospital for Insane, \$126,000; State Orphans Home, \$30,000.

\$149,000,000 TAX PAID IN TEXAS

According to the report of Moore Lynn, State Auditor, the Texas taxpayer digs down in his pocket for around \$149,000,000 a year, exclusive of the gasoline tax and other special taxes collected by the departments of the State government. The report was submitted in compliance with a law passed by the last Legislature.

The report showed that for the last fiscal year total taxes were \$149,880,-675. And the State got only about onesixth of this amount. Most of it went to the other 8,999 taxing units in Texas. This was the first time that such a summary had been made

Counties got \$35,610,858, which is 23 per cent of the total; cities, \$43,093,791. or 28 per cent; school districts, \$32,-469,605, or 21 per cent; road districts, \$6,446,592, or 4. 3 per cent, and the

State, \$26,863,141, or 17.9 per cent. The taxes excluded from the summary were the gasoline, gross production, gross receipts, franchise and other taxes collected direct by State departments, as well as auto licenses.

ENVELOPE FACTORIES IN TEXAS There are four envelope factories in

Texas, and the factories can produce two million envelopes a day, or a total of 600 million as year. While this sounds like a great many envelopes, it is nevertheless but a small fraction of the total number of envelopes used in the State every year.

MANY IRRIGATION PLANTS IN BAILEY COUNTY

It is estimated that about 100 irrigation plants are at present in operation in the Blackwater Valley in Bailey county. An increased acreage of Irish and sweet potatoes, tomatoes, onions, watermelons, chili, peas, beans, sweet corn and other special crops is being grown under irrigation in the valley this season.

STATE SCHOOLS REQUEST LESS

The State supported colleges of Texas this year are asking \$13,425,000 less than requested of the Legislature two years ago. In 1930 the Texas college system requested of the Board of Control and Legislature \$31,254,000 for the biennium, while the board recommended but \$17,838,000. This year the educational institutions are cutting their requests to the figure recommended by the board to the Forty-Second Legislature. The Legislature is expected to effect further reductions.

ONLY 4 PASSENGERS KILLED IN TRAIN WRECKS IN YEAR

Only four passengers lost their lives in railway train accidents (collisons, derailments, etc.) in the United States in 1931, the lowest number of such fatalities ever reported to the Interstate Commerce Commission in any one year.

Of the four passenger fatalities three resulted from one accident, when a passenger train was derailed, and the fourth was from a collision between two trains. For each such fatality in train accidents, the railroads carried 150,093,000 passengers. Traveling at the rate of 35 miles an hour, this means a passenger might travel continuously for 17,975 years before meeting with a fatal accident. Put in another way. this degree of safety in transportation 582 times before being caught by the law of average.

EAST TEXAS SLASH PINE MAKE SEED CROP

From Kirbyville comes the announcement of the appearance of what appears to be the beginning of the first crop of seeds of slash pine set out in experimental plantings in East Texas forests by the State Forestry Service. It has would seed under Texas conditions. W Bond, of the State Forestry Service in 1926 set out twelve-month-old seedlings at a Substation No. 4 in Newton county. But there were some slash pines planted from seed in 1918, of which all but six died. These trees and some of the latter plantings are now making their first burrs, which will be due to ripen this fall, State Forestry officials are of the opinion that seed from the burrs will produce hybrid trees, since no male slash pine flowers have been observed so far. It is probable that crosses between longleaf and slash will result.

LONHORN CAVE DEVELOPED

Lonhorn Cave, which was recently discovered in Burnet county, between Marble Falls and Burnet, promises to become one of the show places of Texas in the near future, and toward which the eyes of all tourists will be turned.

The great cave has proved to be a fantastic underground fairyland. It is said to be the third largest cavern in the world, excelled in size only by Carlsbad cavern and the Mammoth Cave in Kentucky.

A tract of over two thousand acres of land adjoining the cave was recentdeeded to the State through the efforts of the chairman of the State Park Board. The park and cave have been formally opened to the public.

The cave is to have a tunnel eight miles long, and trails are being built throughout the explored area. Every comfort and convenience is being provided for the influx of visitors expected

Among the conveniences which have or will be provided are modern electrical ighting equipment in the natural theater grounds and swimming and fishing facilities in the park grounds.

DON'T FORGET THE AMEND-MENTS

While the voters of Texas are giving attention to the election of National and State officers, they should not forget that nine constitutional amendments are to be voted on at the November election, and that each of the proposed amendments is of great importance to the people of the State. Some of the proposed amendments involve radical changes in various practices of the government, and if adopted will have farreaching effect. The proposed amendments to be voted on in November are:

The amendment restricting the right to vote on bond issues to owners of property duly rendered for taxation. The amendment giving exemption

from State taxes to \$3,000 of the assessed value of all residence homesteads. The amendment allowing the invest-

ment of University funds in county bonds, city school bonds, municipal bonds of Texas counties and cities, as well as in Federal and State bonds to which investment is now restricted. The amendment providing a new sys-

tem for tax sale of delinquent property. with lower redemption costs if redeemed during the first year. The amendment prohibiting release

of indebtedness to the State of any unit thereof except delinquent taxes which have been owing ten yars.

The amendment permitting the retired United States soldiers to vote. The amendment authorizing the Tex-

as Centennial Celebration and permit-

ting the Legislature to make appropriations therefor. The amendment combining the offices of tax collector and tax assessor

in all counties having 10,000 or more population. The amendment changing the law governing the voting of bonds so that Gulf counties may issue bonds for sea walls and other protective works with a favorable vote of two-thirds of the property owners voting, instead of twothirds of all property owners as at

CHURCH The first Protestant church in Texas was erected at Matagorda in 1841, after being organized in 1837. It has been destroyed and rebuilt three times. The communion rail and other fixtures of the first chapel erected are in use in the present building.

TEXAS' FIRST PROTESTANT

TO CONSUME MORE COTTON

While the country is producing more cotton than is consumed, it is not producing more of the fleecy staple than could be consumed. More cotton clothing could be used without the sacrifice of comfort or appearance. More of the country's products could be wrapped or encased in containers made from cotton, more cotton twines could be used, and there are many ways in which the consumption of cotton could be enlarged by organized effort.

It is pleasing to note the move in Hill county, by the County Federation of Women's Clubs, to increase the sale and use of cotton goods. Looking toward such a consummation, a Cotton Club has been organized. Efforts are being made to enroll every housewife in the county, and the Federated Clubs of other counties will be asked to start similar movements. A survey of the county showed that more than ten thousand kinds of goods and articles of cotton are used locally. A bureau has been established to give housewives information as to new uses of cotton. Club members have also agreed to give Texas-made products

MEAT PACKERY AT STATE PRISON

An important move to be made by the Texas penitentiary system is the launching of a meat packery at the Central Prison farm near Sugarland. The packing and canning unit of the prison system is the beginning of what the officials hope will be developed into a great vocational training place for State prisoners, and a source of food supply for inmates of all State institutions.

It is hoped and believed that this will serve the double purpose of equipping men for useful occupations after their return to civil life, and of saving the taxpayers vast sums of money. The prison system has vast tracts of land, and also thousands of prisoners, who must be kept busy. It is the purpose of the managers of the system to grow food for all of the State institutions, and then to give the prisoners such useful work as canning the products of gardens and fields and packing meats raised on the farms. The cotton acreage on the farms was reduced fully oneto corn, truck and feed increased fully that much. The scheme is to make the prisoner make their own living and also feed the thousands of inmates of the State's eleemosynary institutions. The meat bill, the State's largest item of grocery expense, will be eliminated by the packery. The cannery has turned out tens of thousands of cans of corn. beans, tomatoes and other vegetables.

When the industrial plant and general agricultural program reach their full development it expects to save the State more than a million dollars annually. And in addition to this great saving, the prisoners will be given better training and better food.

FORTS WILL PROBABLY BE ABANDONED

Despite persistent efforts of citizens of the Big Bend country, it looks as if Fort D. A. Russell at Marfa will be abandoned next January. The fort was first occupied in 1916 as a protection for ranches in the Big Bend area. The Brite ranch was raided by outlaws from across the border. The property embraces 434 acres of land and is valued at \$750,000. The present force consists of 27 officers and 554 enlisted men. When the fort is abandoned this cayalary troop will be sent to Camp Knox, Ky., to form one of the units of the mechanized cavalry in the army.

FROM OVER THE STATE

Fort Brown, at Brownsville, will also be abandoned. It was first occupied by the United States troops in 1846 in connection with the Mexican war. It comprises about four hundred acres of land, and the property is valued at \$3,358,-

COM

One of the most complete and interesting collections of historical relics to be found in the Southwest is owned by John B. Dunn, of Corpus Christi.

Mr. Dunn, who is now in his eighties, egan sixty years ago the collection of the relics which now make his museum the show place of Corpus Christi, and which many people travel hundreds of miles to see. And Mr. Dunn is still active in collecting, just as anxious to enlarge and make more interesting his collection as he was thirty and forty years ago. The collection, while including many other interesting relics, runs largely to firearms, in which Mr. Dunn has had a keen interest from childhood.

One of the first relics to find a place in the embryonic museum was a fragment of a bomb shell fired by Napoleon's artillery and struck the house occupied by Lord Wellington as headquarters. This was sent Mr. Dunn by a young Belgian soldier who had served under Maxmillian in his illfated campaign in Mexico. This same Belgian's friend sent two rare horse pistols, one dated 1500 and the other 1600; both were flint locks originally but had later been converted into cap and ball types. The latter was used in the Napoleonic

The doorstep leading to the museum is the vertebrae of a mammoth whale which was washed ashore, and the door-knocker is a sacred Chinese dog in

Every period of American history is third this year, and the acreage devoted represented in the long gun rack-the long rifle of the early settlers, a San Jacinto rifle, a gun that was used in the battle of Palo Alto, a sharp rifle used by John Brown at Harpers Ferry and a carbine used by Pancho Villa's men at Columbus, New Mexico. The collection of side arms is also complete. There is a sword used by Von Blucher's men at Waterloo, and one used by La-Fayette's men. The World war collection is extensive and is being constantly added to.

THE BEE AND HONEY INDUSTRY IN TEXAS

Texas is one of the large producers of honey and should become the largest producing region of this commodity. The climate of Texas is ideal for honey production, and with such a profusion of wild flowers, it is possible to produce honey here at a lower cost than it can be produced anywhere in the country. And honey produced from cotton blossoms, of which Texas has such a wealth, is said to be the very best, both in flavor and color.

According to T. W. Burleson, President of the Texas Honey Producers Association, the normal production of honey in Texas is about fifteen million pounds a year. About seven hundred Texans are engaged in the commercial production of honey. The Uvalde area is the largest producing section, but honey is produced commercially in nearly every section of the State. Mr. Burleson, the President of the Association, is one of the large producers, and probably the largest producer of honey in the State. He resides at Waxahachie, and began producing honey in a small way thirty years ago. He now has 2,500 colonies of bees, each colony con-Among the first editions found in sisting of between 75,000 and 100,000 Hallinen's collections are books by Brete bees, which are distributed over various sections of Ellis county, the colonies being divided among sixty apiaries,

A little more than one-half of Mr. Burleson's colonies are in permnanent locations; the others are moved from place to place as the season advances. In the early spring, when the wild flowers are blooming, the movable colonies are placed around the hill country where the flowers bloom in the greatest profusion. Later, when the cotton begins to bloom, they are moved down into the cotton fields.

Last year Mr. Burleson produced 125,000 pounds of honey, and this year he expects to produce 200,000 pounds, having added several colonies of bees. He also ships a great many bees to the North, and receives from the sale of bees almost as much from the sale of honey.

Hermit's Rare Books Left University

present.

By GEORGE OVIE HOPKINS Norman, Oklahoma.

(Copyright, 1932, by the Home Color Print Co.) HE WAS called the "Intellectual Hermit," the "Recluse of Coopertown Valley, whose of books and scientific magazines cently in the library of the University of Oklahoma.

Over 400 first editions of books have been discovered by librarians from the hermit's 15,000 volumes, one of the most amazing collections ever assembled by an individual in the Southwest," says L. Rader, University librarian. No monetary value has been placed on the collection by the University, but from the standpoint of students, interested in research work, the collection is extremely valuable.

Lived on Quarter Section in Wichitas Prof. Joseph E. Hallinen, the hermit's name, lived on a quarter section of land nestled in the shadows of the Wichita mountains, at the foot of Saddle mountain, near Hobart, Okla. He died Feb. 13, 1932, alone in his shack, satisfied with having lived as a hermit, scientist, scholar and gentleman for 31 years. Though uninviting on the outside, the shock housed bookcases filled with rare vollmes, magazines, and treatises on

many scientific subjects. Hallinen was graduated from the University of Chicago in 1894. He was 34 years of age when he started teaching in Illinois and Indiana. He received his professorship at the University of Chicago. He taught mathematics and physics at the University of Oklahoma in 1900-1901.

When the government advertised the opening of Kiowa-Comanche Indian Territory, it afforded the scientist an trees back to life.

dream. He came to El Reno in 1901 and drew a lucky number from a huge

He chose the 160 acres of land at the foot of a mountain less than three miles southeast of Coopertown. The land, along Elm creek bottom, was adapted for raising cotton, corn, wheat and other products.

The 160 acres to this day has not been broken by plow. Once Hallinen let neighbors pasture cattle on the land, but canceled the agreement when the cows ate plants he could not classify.

Nursed Bushes Back to Health

During a drouth he permitted farmer friends to haul water from Elm creek, adjacent to his land, but compelled them to take a different path each time to the creek, for he did not wish to see a path beaten through the prairie

He believed in paying for everything, and would not accept an empty box from a groceryman without paying for it. He brought food to his shack by the carload. At one time he was feeding 32 cats; the cats had a special entrance to the house through a hole drilled under a window.

The professor would watch for hours and hours the actions of wild animals and insect life, ranging from ants to coyotes. He was deeply offended when this animal and insect life was killed or bothered. He allowed wasps and muddaubers to build at will in his house. Shortly after settling on the 160 acres, he built a dam across Elm creek, but promptly blasted it when he caught hunters killing ducks from the pond. He was constantly nursing plants and

opportunity to realize a long-cherished Handled Own Contested Case in Court

When he settled on the 160 acres of land, in 1917, his title was contested on the grounds that he had not lived on the land the specified amount of time required by law. Hallinen handled his own case in court and won.

Neat and cultured, Professor Hallinen chose to live a solitary life and never invited visitors to his home, but was courteous when visitors called. He arranged with an undertaker for his own burial a year before death. His request for a quiet and simple funeral was carried out. At one time he was chemical superintendent for the Rumely Company in Laporte, Indiana.

Although a hermit, the professor had ample means. He kept his money in open bank accounts and his bonds in bank deposit boxes.

Harte, James Whitcomb Riley, Eugene Field, Joaquin Miller, Helen Hunt Jackson, Mark Twain, William Dean Howells. George W. Cable, Henry James and Ambrose Pierce.

There is a copy of "Conquest of Herando De Soto," by Theodore Irving, nephew of Washington, Irving, one of the first books written on De Soto. A copy of "Colonel Crockett's Adventures in Texas," published in 1836, and now very rare. A letter signed by Prince Bismark, written in the 18th contury, was in the collection.

Whether there was an outstanding reason for Hallinen's self-imposed hermitage, other than his love for books. flowers, plants, animals, the solitude of the mountainous country and his desire to study uninterrupted, is not known.

Trouch Siles for Big West Texas Feed Crop

IUST WHAT ITS NAME IMPLIES, a trench silo is simply a trench dug into the ground into which chopped feed crops may be stored for feeding as succulent ensilage to dairy cows, beef cattle and work stock during periods of dry pastures or bad weather. Cheap, easily dug, easily filled, ensilage easily removed, the big disadvantage of a trench silo is excessive spollage which may be avoided by properly filling, and by providing drainage. More than 200 were dug in Texas in 1931 and county agent reports indicate a big increase for

LOLA REDDEN

TRENCH SILOS FOR STORING FEED ARE HIGHLY RECOMMENDED

College Station, Sept. 7.— Trench silos for storing the abun-dant food crop in West Texas this dant food crop in West Texas this year are recommended by M. R. Bentley, farm engineer of the Texas A. and M. College Extension Service. Calling attention to this old practice which has been the community. It was ginned by the Vick Gin. bevived throughout the State in It was ginned by the Vick Gin. recent years with great success, Dock Finley bought the cotton for he gives the principal advantages of this mode of storage as low first cost, and the short time required to dig one ready for filling. It is easy to get the silage out, except possibly in rains were also because it means that radio communication is going to be more reliable and less expensive. The shorter the radio waves, the less interference there is from out, except possibly in rainy weather. The greatest disadvantage of a trench silo is the danger of the Olin Store. The opening day ago—we have been friends for the opening day ago—we have been friends

the thing that should be emphasized in reducing spoilage losses are the packing of the silage; the filling of the trench full to running over; and then covering the silage in such a way that rainfall and surface water will not run down through the silage," Mr. Bentley states. "More water should be added to the silage put into a trench than would be reter of trench silos indicate that Johnnie Farmer. into a trench than would be re-quired in a pit or above ground Oglesby visited in the home of "because rayon—artificial silk—

NEWSPAPER COLUMNIST SAYS HE'S LICKED; WANTS A TELEPHONE

"After being telephoneless for more than three years I am about ready to throw up the sponge and admit that I am licked.

"It may appear simple to dispense with a telephone as either a desire not to be bothered or as an economy measure, but just try to do it and see what happens!

"You may think that, when you cut off your telephone you are merely doing something that concerns yourself and your family. You may feel that, after all, it is your business whether you have a telephone or not. If your failure to have the telephone inconveniences friends and acquaintances, that is just too bad, but after all they do not pay for the service.

"Imagine your surprise, then, when the world declines to admit that you have a right to dispense with telephone service. Unable to reach you directly, by telephone, kind friends do not take the trouble of making a personal call or using the United States mail, but they call up the neighbors and beg them to kindly call you into their homes to talk over their telephones! Or they ask the neighbors to relay messa-

"Even members of your own family despite your orders, will surreptitiously use the neighbors' telephones. The net result of all this is that you are placed in the position of saving the cost of a telephone at the expense of your neighbors.

"You intimate to the neighbors, as politely as possible, that you would like to have them refuse to be bothered by telephone calls from your friends. You inform them that you authorize them to use any excuse they like to evade the necessity of acting as your messenger.

"Does this make any difference? It does not. The neighbors assure you it is no trouble, they're glad to accommodate, and insist that members of your family use the telephone as often as they like. And all the time you know they are thinking: 'Well, he ought to be paying for his own telephone service.'

"In conclusion, let me state the 'phone fellers kin put in the biggest 'phone they got in stock at my house any time they see fit. The sooner, the better!" (From the Lewistown, Pa., Sentinel.)

AYLOR COLLEGE A LITTLE FUN Jokes to Make for Women-Belton, Texas A LITTLE FUN Jokes to Make You Women - Belton, Texas

Why They Called Him Speedy

Bert Swor, the minstrel man, is something more than a mere blackfaced comedian. He was born and reared in ing than your daddy." a Texas town and he probably knows as Boy—"I ought to be. I'm a later much about the true delineation of cer-model." tain negro types as any living man.

One of his most popular wheezes is a rendition of something which a colored man at Fort Worth said years ago. Two negroes were talking together. As Swor passed by he gathered that the subject under discussion was the relative fleetness of foot of the pair. One of them said:

"You claims you is fast! You says you's so fast folks calls you Speedy! Jest how fast is you, nigger?"

"I'll tell you how fast I is," said the other. "De room whar I sleeps nights is got jest one 'lectric light in it and dat 'lectric light is forty feet frum de baid. W'en I gits undressed I kin walk over to dat 'lectric light, turn it out and git back into baid and be all eovered up befo' de room gits dark."

Elastic Prescription

'What did the doctor say?" Wife-"He said I ought to go to candidates for Govenor the enty bird colonies are guard- Also that I must get some new light Palm Beach, and then to the mountains.

A Touch of Summer Complaint

A small negro boy went to a physician in Natchez, Miss., to be treated for a painful sensation in one of his ears. The doctor examined and found the ear was full of water.

"How did this happen," he asked after he had drained the ear-"been going in swimming?"

"Naw, suh," said the little darky-"been eatin' watermelon!"

Careful, Harold!

Harold had taken his girl friend to lunch and she had spoken to a nice looking man at the next table. "Is that man a friend of yours?"

asked Harold. "Yes," she replied.

"Then I think I'll ask him to join us." "Oh Harold, this is so sudden." "What's so sudden?"

"Why, why, he's our minister."

Well Versed

One examination question in the class in agriculture was: "Name four dif-ferent kinds of sheep."

After much deep thought this was the answer of one student: "Black sheep, white sheep, Mary's little lamb and hydraulic ram."

Often Proves Fatal

A good, but simple-minded man, by birth a German, sent his wife to the out to feed the stock they'd be hid in hospital for an operation. The opera- the brush-fence at the lower end of my tion was performed in the forenoon. Poultry Facts By F. W. KAZMEIER Poultry Breeder. Bryan. Texas

September is the time your pullets should be returning you a profit—always remember, however, that they can not make something from nothing. Feed and care, vill show in the egg basket. Don't expect good

egg-production feeding grain or a grain mixture along. It takes more than that to make eggs. A well balanced mash mixture is absolutely necessary and for best results we recommend a good commercial egg mash, manufactured by a responsible concern. I would prefer to mix my own mash, before feeding a mash made to meet a cheap price. Some commercial egg mashes are unsatisfactory, because they are

made to sell rather than produce eggs. A good commercial egg mash, at present prices of eggs, is a good investment. If you can not get a good commercial og mash, it will be necessary for you to mix your own. Remember that grains alone, especially such one-sided grain mixtures as mile or kafir, will not only prove a poor egg producer, but eventually will indirectly be the cause of your pullets showing weakness and sickness, such as colds and roup

A properly balanced egg mash mixture, will make you money and prove a very profit-

able investment. Just because it may mean extra work and expense to provide the mash mixture, is no assurance it is not absolutely necessary. The egg is composed of definite parts-and

definite form of raw materials are necessary in a hen's ration. In the case of pullets you can keep the mash mixture in one hopper and the grain or grain mixture in another hopper. Keep it before them all the time and do not worry about their eating too much. A laying pullet can not

eat too much and it does not get too fat to lay. More often they do not get enough to eat and are starved, poor and thin. Provide an abundance of fresh and clean drinking water.

Be systematic and regular in your method of taking care of them. Do not make any sudden changes in feed or method of feeding.

If possible, latter part of September and during October, November, December and January use laterns or electric light lengthen the daylight hours during the short days in fall and winter. Provide springtime conditions as nearly as possible, both with respect to feed as well as day light hours. Do not frigthen the pullets,

Watch the ventilation, especially during sud-

den outside temperature changes, Keep the houses and floors clean and dry, For backyard poultry raisers we recom-mend keeping them indoors instead of allowing them to run on contaminated yards.

that fast-steppin', big city gasoline

Women, especially, will appreciate the improved Sinclair Regular Gasoline — it makes their cars so much easier to handle in traffic. For this gasoline is refined to a formula developed by Sinclair engineers to help solve the traffic problem in America's biggest cities.

The improved Sinclair Regular is a faster, lighter gasoline containing no heavy elements to cut down speed in pick-up. Every drop is a light, easily vaporizing fuel that burns swiftly, evenly and completely in your engine - giving you that instant surge of power you need in traffic. On the open highway, too, this big city gasoline puts a world of quick, eager power at your toe-tip whenever you want to pass the car ahead. Ask for Sinclair Regular, the big city gasoline - IT COSTS YOU NOTHING EXTRA!

NOTE: For best results, use Sinclair Opaline or Sinclair Pennsylvania Motor Oil. Both have been de-waxed, and also freed from petroleum jelly at as low as 60° F. below zero.

POLICEMAN'S PUZZLE

In the course of perming his connected with arding lives and operty the policeman ets with many trange and exciting experiences, to say nothing of the dangers often encounters. Besides these there many other things timately connected ith a policeman's life. our of them are picared in rebus form in e accompanying awing. Study caramall pictures and the hances are you can name correctly the n of each of the four uzzles. Time yourelf and see how quickyou can do it

ANSWER TO LAST MONTH'S PUZZLE

Wive's Names: The names of the ix wives which suggest thir husband's vocations are: SUE (lawyer). FAN (ball player). GRACE (dancing master). PEG (shoemaker). SOPHIE (sofa, unholsterer). MARY (marry, clergyman).

DEAR FRIENDS:

Here we are at the threshhold of fall again. How rapidly the seasons come and go. First, the birth of spring, seed-time and harvest, and then the long nights of winter. One of the greatest lessons nature teaches is unselfishness. In the spring

mother plants bloom in all their glory -in the fall they die that baby seed might live on. What is true of plant ife is equally true of animal life. Out in the forest the mother deer will gladly die that she might protect and save the life of her young. Even the law of the jungle is for the good of the whole. Leaves fall from trees to supply food for baby leaves next year. Everything works for the good of mankind. Grass grows to feed animals, grass seed and berries to feed birds, etc., each is part of "THE GREAT PLAN." Each must serve. When any part fails then everything suffers. So it is with us—we must all be unselfish, must all do our part, nust all give, must all take ,and, above all, we must love God and our fellow-

I am sorry for those tha cannot live "next to nature;" more sorry for those that live out where God has put so many lovely and beautiful things and yet are so blind in soul they cannot the purpose and handiwork of

I am sure most of my boy and girl readers shall gladly return to school where they can learn the things that y make them fine igent men and women. I suspect the oy and girl readers of this page lead their classes in school. Boys and girls willing to do something for others are generally the kind that progress and make the most of opportunities, that appreciate the sacrifice of parents to keep them in school.

If you are a reader of this paper and do not belong to our little club "Sun-shine for Shut-Ins," then please con-sider this a personal invitation to join. If you have been a member and for some reason have dropped your membership, please consider this a personal invitation to come back into the

Though times have been "hard" and many of us have not had funds to help others, yet we have kept rays of sunshine in darkened homes, carrying the message of love and hope.

There is such a big and interesting mail bag this month, I am going to turn to that and let you read for yourself what others may have to say.
With love,

(Signed) AUNT MARY.

jelly

Here are the high lights of many letters. Wish we had room on this page to print every word contained in these letters. They are all so worth while.

Aunt Agnes Pick, Berkley, Calif., writes that she enjoys the club so much and that she hears from quite a few of the Shut-Ins. She speaks of Vera Forbus and Leon Martin, dear Beulah Lamb, Mrs. Pearce and Waldine Young and then others. Aunt

Agnes writes lovely letters.

Beulah Lamb, Hazel, Ky., writes
that she thinks our boys' and girls' page grows more and more interest-ing. She is praying for the good work and may her prayers be answer-

Aunt Susan Hughes, Galveston, Tex-She tells about a dear letter from our "little Nell" and how sweet, patient and loving she is. Aunt Susan says she is some better.

Anita Boothe has moved to Rawlins, Wyoming, and wants to be re-instated to membership in the club. Isn't it nice to have a member from such a far Northwestern State?

Aunt Emma Rothermel, Bay Minnette, Alabama, writes the most won-derful letter. If you are lonely and blue, write to her and enclose a selfadressed stamped envelope; in return you will receive a most wonderful leter. Aunt Emma finds it hard sometimes to get enough stamps but, through her great faith, God is work-ing wonders and sends her help when and where she least expects it. She says "I don't see how people with money cannot but want to help others." That is one curse of great wealth—it so often blind to the real need and beauty of the world. That hy the poor and the "near" poor

e the greatest wealth (the wealth love and heart). Make your own ishine and happiness by giving to hers is the keynote of our work.

A dear lady whose name I cannot mention writes this beautiful thought, "I enjoy doing everything I can to bring joy and happiness to other lives. I want so to live that when I am gone people will say, 'we are glad she passed our way." I want my life to reflect Christ, is my prayer. May God's sweetest blessings crown your pathway." Here, in a few words, you see this good and true woman's character;

get it.

HOME PROBLEMS

No one likes to be "hot and bothered" in summer therefore when selecting your summer wardrobe choose simplicity of line, color and fabric. Fussy prints, designs and warm colors are confusing to the eye and cause unrest. Small geometric prints, scattered apart, on grounds, such as white, beige, blue, and green are excellent choices for cooling effect. Pattern 1173, for ex-ample, would be lovely in printed flat crepe or sheer

cotton with a dainty lace yoke as contrast. The seamings bodice, skirt, and snug hip ing on the matron. Three quarter length sleeves are attractive on stout arms. This pattern may be ordered only in sizes 36 to Size 36 requires 3% yards of 39-inch fabric, and 1 yard of 1-inch lace. Pattern 1106 boasts simplicity of line, and that touch of contrast at belt and bow so favored Need we mention that top stitching is ever so smart? Again one may use the popular cottons, linens or sheers to fashion this delightful ports frock. This pattern be ordered only in sizes 12 to 20 and 30 to 42. Size 16 requires 2% yards of 36-inch fabric, and 1 yard of 31/2-inch These models are very

easy to make as each pattern comes to you with simple and exact instructions. Yardage is given Send FIFTEEN CENTS

preferred) for EACH pattern. Be sure to write plainly your NAMES, ADDRESS, THE STYLE NUMBER and SIZE of each pattern

TEACHING CHILDREN TO WORK-(Concluded)

was, "extreme cruelty." On the cold, lifeless records it would mean little or nothing to the average observer. But to those who knew what was behind "the scenes" it spelled, tragedy-sad tragedy that could have been avoided. This broken home affected not only the lives of the two principals, but the lives of two helpless children. Ten years ago this The wedding man and woman were married. dicted a brilliant future for them. The girl A feature of the meeting had been reared in a home of comfortable means; but because she was an only child her mother reared her in idleness. They had a small but comfortable home, and there was very little work to do. The mother did everything for her daughter, who did not know how to do anything for herself. The boy came from a richer home, there were two sons, and they too had been reared in idleness, with servants to do their bidding. After the wedding the father of the groom set his son up in a business of his own-but after a few months the father was convinced that his son did not have the ability to "manage" because he did not know how to do the work required, and therefore could not direct.

The father secured for his son a position with a firm where he had friends and influence. After a while the daily grind grew tiresome and he became slack. Gradually he was reduced lower and lower, solely because he had NOT been taught the value of "stickto-itive-ness" that comes where one knows how to really work. Time passed swiftly; two darling babies arrived. The parents of the couple hoped that arrival of the babies would spur the father to better effort. were hoping for a miracle where they themselves had fallen down. The wife hired a maid to do the house work and later a nurse for the children. As the husband's earnings diminished the expenses increased. Because neither knew the value of money or the reonsibility of work they were helpless. father of each contributed each month to their support. But because they were both worried, they quarreled frequently. One day they were both stunned by the news that the boy's father had committed suicide, leaving a note saying he had made a failure in the rearing of his children and that he was broke. In less than a year the girl's father was ac-cidently killed in an automobile accident. Finally they separated, each to go his or her way, and the two children were without a home, to be shoved from pillar to post-all because their parents had not taught them to work. If they had known HOW to work, and had been taught the value of honest labor well done, the story would have ended differently. Both would have "buckled down" o their respective tasks and been willing to their share to keep the home together.

How shall we teach our children to work? First of all, by example. I once heard a great man say his father always said, "Come on boys," and NOT, "go on, boys." Children ould first be taught to do correctly the tasks which they see most frequently performed. Usually this is simple work. A well regulated household is one in which a child learns most easily how to work. Children like to feel that they are working with you and not for you. They are just YOU in miniature, and by considering HOW ou would work the best you can understand HOW they will work the best. We are all West 17th Street, New York City.

In a recent divorce suit the public complaint working for a prize of some kind. It is not wise to offer rewards of some specific thing for work well done, yet children should be made to feel that they are part of the family, and that in whatever reward is gained by the family through the united efforts of all that they will have a share. A household should have a regular routine for each day and each member should have a part. "Let" children work—don't "make" them. This does not mean they should not be required to do certain regular duties, but that this should be the attitude of mother and father to the Make them feel it is a privilege to be able to take part in the daily life of the

> The work children should be required to do should be within their mental and physical strength. The small toddlers should be taught to pick up their cothes and put them on a chair or a low shelf. Very early the habit of putting away toys may be taught. As they advance in age, more tasks should fall their Never should they be given tasks more difficult than they can manage. First know how and then show the child how to do something correctly. Have patience in teaching. Some children grasp an idea very quickly, while others sometimes do not want to and sometimes cannot understand. Teach patiently but firmly. Live pets are an excellent medium for teaching children working habits. Here through love they are taught care and routine by being required to take full care of an animal. Make them feel and know that should they fall down in their duty of care the pet would suffer.

When children are old enough to share in the care of household duties, or in of chickens, cows, or any other profitable occupation of the family, they should be given the rewards of their labor lovingly and not begrudgingly. Where children, for example, help with the raising of chickens-take care of feeding and watering, cleaning, etc., they should be given a specified number of those chickens, permitted to do with same as they may choose. The parent may suggest putting the money in a saving account or reinvesting it, but the children should not be forced to do so. Where children help with the raising of a crop they should be given material interest in that crop. NOT told that they should earn their room and board-YOU owe them that. Your child should be made your partner, NOT your hired-

Tragedy, heart break, ill health, and most of the ills of the human mind and body can be avoided, and sometimes cured by "WORK." Don't cheat your child. Should it be your good fortune to possess much property, teach your children to work so they will be capable of preserving it after you are gone. If you are poor in worldly goods but rich in love, teach them to work that they may go forth well-armed for the battle of life. Persons who can work with their hands learn more quickly to work with their brains. Laziness is more often the result of training than inheritance.

If we know the simple joys of life we are happier and more content. Our greatest and brainest men find their highest inspiration when performing simple, wholesome tasks. Give your children the best in life; give them the tools most useful; give them something that only death can take away-the desire and satisfaction that comes from "KNOWING HOW TO WORK."

TESTED RECIPES

Here are some good tested recipes. How do you like them?

Apple Butter
Peel, quarter and core 4 quarts sour apples
and 1 quart sweet apples. Weigh the apples
and weigh out ½ pound sugar for each pound of apples. Put in a large stew kettle, add

enough apple cider to cover the apples and cook mixture to the consistency of marmalade, stirring almost constantly when the mixture is thickening. Add the sugar and 2 tablespoons of cinnamon and continue cooking until mixture thickens again. Pour into (Continued in next column)

sterilized jars and seal. It is beneficial to pressure cook in jar 15 minutes after sealing, where possible. This adds a very good

Indian Pumpkin Pudding Cook 1/4 cup of corn meal and 2 cups scalded milk together for 20 minutes. Add 1 cup cooked pumpkin, 1/2 teaspoon each cinnamon and ginger and ¼ teaspoon salt. Pour into greased baking dish and bake slowly for 30 minutes. Add one cup seedless raisins, mix thoroughly and bake 30 minutes longer until firm. Serve hot or cold with sugar and cream.

Rice Puding

Wash ½ cup rice and stir into 1 quart scalded milk. Add ½ cup sugar 1 teaspoon salt and 2 tablepoons butter. Pour into greased baking dish and bake in a slow oven about 2 hours, stirring occasionally during cooking. Let cook the last half hour without stirring, so top will brown. Rice pudding made in this way will be creamy and delicious in flavor. 1/2 teaspoon grated nutmeg, cinnamon or emon peel may be added for flavoring if desired.

How to Use Salt Dentists recommend salt as mouth wash (one-half teaspoonful to a glass of warm water) and also for daily use on the toothbrush. They assert that its use as dentifrice will quickly whiten the dullest teeth and keep the gums firm, pink and free from pyorrhea.

TEXANS USING MORE BY-PRODUCTS

Texans are beginning to use many by-products that were formerly thrown away. San Antonio has a horseslaughtering industry, using the horse meat for dog food. El Paso uses horse meat in the preparation of chicken feed. Bolivar Point, across the bay from Galveston, has a fertilizer plant which is and makes it into commercial fertilizer.

INTERURBAN LINE DISMANTLED

The interurban railway line extending from Dallas to Terrell, a distance of about thirty miles, has been dismantled The line was sold a few months ago to Brown & Root, contractors of Autin, who have now taken up rails. The steel rails and copper wire have been converted to use in various street railway systems. Much of the right of way will probably revert to farm use.
