March 3, 1879.

NOTICE

Any erroneous reflection upon the
character, standing or reputation of
any person, firm or corporation
which may appear in the columns
of the The Floyd County Plainsman
will be gladly corrected upon its
being brought to the attention of
the publisher.

CHANGED OWNERSHIP

The Lockney Beacon last week
announced a change in ownership.
The first issue, printed under the
new management, was published last
Thursday.

H. B. Adams, former owner and
editor of the Beacon, has assumed
management of a newspaper plant
in Lubbock. R. J. (Bill) Dison and
Oscar Pogue are now in charge of
the Beacon, Mr. Dison being editor
and assistant manager and Mr. Pogue
being publisher and manager.

The Plainsman sincerely hopes
that Mr. Dison and Mr. Pogue and
the Lockney Beacon will be well re-
ceived by the public, which we feel
sure that it will. We hope that the
new management of the Beacon will
continue to "neighbor" with the
Plainsman, as did Mr. Adams, for-
mer owner.

The Plainsman wishes Mr. Adams
a successful venture in Lubbock and
are confident that he will make a
success of his newspaper there.

Dale Strickland, who is attending
Texas Tech College at Lubbock, spent
the week end visiting in Floydada
with his parents, Mr. and Mrs. G. R.
Strickland.

Tells How To Avoid Winter Motor Trouble

Dallas, Texas, October 6.—"Almost
human in their ability to obey the
will of their owners, modern motor
vehicles also have the human attri-
bute of being susceptible to changes
in the weather," J. M. Marnan, chief
of the technical department,
Magnolia Petroleum Company, said
in warning automobile owners to pre-
pare for winter driving.

"People are warned of the ap-
proach of winter and instinctively
put on heavier clothing and change
their diet to assure their personal
comfort and well-being in the cold
months ahead," Mr. Marnan said.
"Our automobiles need the same kind
of care and protection, but they can-
not provide for themselves. About
the only way they can let us know
they are suffering from the cold is
to refuse to start easily on cold
mornings and consume more fuel
than they have been in the past sum-
mer. They have no way of telling
us that their working parts are wear-
ing out and deteriorating rapidly on
account of our neglect. When the
symptoms appear much harm may
already have been done, so the pru-
dent car owner prepares his car for
winter driving at the same time he
puts away his straw hat and begins
to sleep under a blanket.

"With the approach of winter a
complete check-up of the motor car
is often advisable and certain me-
chanical adjustments may be neces-
sary," Mr. Marnan said. "But the
first thing to do is to make certain
that our automobile is receiving the
proper cold weather 'diet'. Gasoline
which may have given satisfactory
service in summer is never suited
for winter use and is often the cause
of hard starting, crankcase dilution,
loss of power and engine missing.
Magnolia provides in its new Mobil-
gas the added property of Climatic
Control which assures the highest
usable level of performance under

winter driving conditions by reason
of the preadjustment of manufactur-
ing specifications before delivery.

"A change in the grade of the lu-
bricants used is also necessary with
the change in the seasons. For cold
weather driving lighter lubricants
are recommended by automobile
manufacturers in order to avoid ex-
cessive wear, difficult steering, hard
gear shifting and other evils. Mobil-
oil and other Magnolia lubricants
are manufactured in accordance with
car makers' specifications and the
Mobiloil lubrication chart shows ex-
actly which grade should be used
to lubricate every working part in
winter as recommended by the car
factories," Mr. Marnan said.

"To adequately prepare the car for
winter driving the cooling system
should be cleaned and tested for
leaks before anti-freeze solution is
added, the battery should be tested
and it is often advisable to replace
spark plugs. Safety appliances on
the car also will be called upon to
perform greater service in winter.
These include lights, horns, brakes,
windshield wiper and steering me-
chanism. They should be carefully
checked and repaired when neces-
sary.

"This fall Magnolia service sta-
tions and dealers are again provid-
ing Winter-Proof service for car
owners throughout the Southwest.
This 7-point service prepares the car
for winter driving and has proved
very satisfactory in the past."

Harold Terry, student in Texas
Tech College at Lubbock, spent the
past week end visiting with his
parents, Mr. and Mrs. J. R. Terry.

W. E. Dooley, who is attending
Wichita Falls Junior College at
Wichita Falls, visited in Floydada
Saturday and Sunday with his par-
ents, Mr. and Mrs. W. R. Dooley.

KEEP RECORDS OF THE LAYING HENS

Only Way to Select Next
Season's Breeders.

Each fall the large number of pul-
let eggs that grade out as pencees,
with a resulting cut in price, are
a source of much annoyance to
many flock owners. About the only
immediate action a poultryman can
take to try to improve this condi-
tion is to feed well of a ration that
is designed to maintain flesh as well
as produce eggs.

In other words, undersized birds
are usually, though not always, the
chief offenders. The feeling of a
wet fleshing mash in addition to
the regular laying ration may there-
fore be of considerable benefit.
Such a mash may be composed of
equal parts of yellow cornmeal and
ground rolled oats moistened with
milk until it is crumbly. It should
be fed once a day at the rate of
two pounds per 100 birds.

However, steps can be taken that
will result in more permanent im-
provement in the future. The pul-
lets that lay the largest eggs right
from the start should be banded
and their number noted so that a
little over a year from now they
can be selected for the breeding
pen. This means trapnesting, as
this is the only way in which this
information can be obtained.

If trapnest records as to egg
weight are available on birds from
which the coming season's breeders
are to be selected, the use of such
birds that lay large eggs—say,
eggs that weigh from 24 to 26
ounces to the dozen—will go a long
way toward eliminating the diffi-
culty in the future with small eggs
in a flock with consequent low
prices for them.—Successful Farm-
ing.

Good Flock Management Brings Poultry Profits

The use of drugs in poultry
flocks is limited. The drugs that are
used are confined to the control of
round worm. Most diseases have
to be controlled by other means,
advises Dr. E. L. Brunett of the
New York State College of Veteri-
nary Medicine.

When there are more deaths in
the poultry flock than there should
be, poultrymen are advised to con-
sult the local veterinarian or the
state poultry disease laboratory.
After the cause has been deter-
mined, drugs can be used with more
confidence; until then, they are too
much of a gamble. Until the chick-
en raiser finds that drugs are val-
uable agents it is best to concen-
trate upon preventive measures and
good flock management, with ap-
proved feeding practices.

Feeding Battery Brooders

Proper feeding, said P. R. Record
of the Ohio experiment station is
the secret of battery brooding. In
the battery every essential must be
supplied, a writer in the Ohio Farm-
er supplements. A formula suitable
for battery brooding as recommended
by Record is as follows: Ground
yellow corn, 38 pounds; ground
wheat or middlings, 20 pounds;
wheat bran, 10 pounds; finely
ground whole oats, 10 pounds; al-
falfa meal, 5 pounds; meat scraps,
10 pounds; dried milk, 5 pounds;
salt, 1 pound, and cod liver oil, 1
pound.

Fifty Per Cent Production

I have read much about the good
care and artificial lighting neces-
sary to keep hens up to 50 per cent
production on short days.
My pullets were hatched May 11,
laid their first eggs October 10,
and on December 1 were over 50
per cent production with very lit-
tle care and no artificial lights.
The 107 unculled pullets laid 1,360
eggs in November, averaging 53
eggs per day for the last half of
the month on which records were
kept.—Michigan Farmer.

POULTRY HINTS

Common poultry rations need only
lime and salt as a mineral supple-
ment.

It is just as important that hens
be given sufficient water as it is to
feed them properly. An egg is two-
thirds water and it must come from
some place.

Fresh air in a brooder house
means red blood in the pullets. Red
blooded pullets pay bigger divi-
dends. Use your nose. If the air
smells bad, change it.

The farmer who maintained his
flock last year found his poultry a
good source of ready cash income
and a profitable crop when other
prices and costs of raising poultry
were considered.

Blackhead will be prevented in a
flock of young turkeys if they are
kept entirely separated from mat-
ure turkeys and from all other
poultry, and from buildings or soil
where other stock has been allowed
to run.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC.,

Required by the Act of Congress of
August 24, 1912.

Of The Floyd County Plainsman
published Thursday at Floydada,
Texas, for October, 1932.

State of Texas, County of Floyd, ss.
Before me, a notary public in and
for the State and county aforesaid,
personally appeared M. B. Cavanaugh,
who, having been duly sworn
according to law, deposes and says
that he is the owner and publisher
of The Floyd County Plainsman and
that the following is, to the best of
his knowledge and belief, a true
statement of the ownership, manage-
ment, etc., of the aforesaid publica-
tion for the date shown in the above
caption, required by the Act of
August 24, 1912, embodied in section
411, Postal Laws and Regulations,
printed on the reverse of this form,
to-wit:

1. That the names and addresses
of the publisher, editor, managing
editor, and business managers are:
M. B. Cavanaugh, Floydada, Texas.

2. That the owner is: (If owned
by a corporation, its name and ad-
dress must be stated and also im-
mediately thereunder the names and
addresses of stockholders owning or
holding one per cent or more of total
amount of stock. If not owned by
a corporation, the names and ad-
resses of the individual owners must
be given. If owned by a firm, com-
pany, or other unincorporated en-
tity, its name and address, as well
as those of each individual member,
must be given.) NONE.

3. That the known bondholders,
mortgagees, and other security hold-
ers owning or holding 1 per cent or
more of total amount of bonds, mort-
gages, or other securities are: Mer-
genthaler Linotype Company, Brook-
lyn, New York; American Type
Foundry Company, Dallas, Texas.

4. That the two paragraphs next
above, giving the names of the own-
ers, stockholders, and security hold-
ers, if any, contain not only the list
of stockholders and security holders
as they appear upon the books of
the company but also, in cases where

the stockholder or security holder
appears upon the books of the com-
pany as trustee or in any other fi-
duciary relation, the name of the
person or corporation for whom such
trustee is acting, is given; also that
the said two paragraphs contain
statements embracing affiant's full
knowledge and belief as to the cir-
cumstances and conditions under
which stockholders and security hold-
ers who do not appear upon the books
of the company as trustees, hold
stock and securities in a capacity
other than that of a bona fide own-
er; and this affiant has no reason to
believe that any other person, asso-
ciation, or corporation has any in-
terest direct or indirect in the said
stock, bonds, or other securities than
as so stated by him.

M. B. CAVANAUGH,
Owner and Publisher
Sworn to and subscribed before
me this 6th day of October, 1932.
(Seal) LOLA CAVANAUGH.
My commission expires June 1, 1933.

CHRISTIAN ENDEAVOR

Christian Endeavor of the First
Christian Church will meet in the
Endeavor room at 6 o'clock. The
program given will be as follows:

Topic "What Does Alcohol Do to
People and Society?"
Leader, Blanche Enoch.
Song, Let the Lower Lights be
burning.

Scripture, Matthew 18:4-6.
Prayer, Daisy Lee Gresham.
Song, The Banner of the Cross.

Introductory Talk, Leader.
Physiological effects of alcohol,
Bernice Gresham.

The loss of control and self-er-
ticism, Gladys Ruth BrBown.
Alcohol and the automobile, Eu-
gene Beard.

Liquor and the community and
civil life, Daisy Lee Gresham.
Scripture concerning alcohol and
its effects on people and society,
Ruth Enoch.

Business.
Benediction.
Mrs. E. C. Nelson and Mrs. J. E.
Swinson were visitors in Lubbock
Tuesday of this week with friends
and relatives.

CHILDREN ARE URGED TO USE PRECAUTION

There is much danger in eating
half-cooked or otherwise improper
prepared food.

School children especially should
take extraordinary precaution as the
eating of poor food impairs the
health which in turn causes the stu-
dent to make low grades in school.

We specialize in well cooked and
well prepared meals. Eat a balanced
meal prepared in our sanitary
kitchen by an expert.

SPECIAL

Hamburger, Slice of Chess

VISITED IN FORT WORTH

Miss Martha Faulkner and Miss Capitola Hardgrove visited in Fort Worth from Friday afternoon to Monday.

Miss Faulkner visited with her parents in Fort Worth and Miss Hardgrove visited with friends and relatives. They returned Monday night.

To Control Ravages of Stomach Worms

Effective Remedy Offered to Sheep Breeders.

Sheep owners may prevent losses from stomach-worm infestation in their flocks by properly dosing affected animals and by breeding their flocks for early lambing. The dosing, which should be started in the spring, is fully described in Leaflet 89-L, "Controlling Stomach Worms in Sheep and Lambs." Repeated tests made with farm flocks for 16 years have demonstrated that the remedy, when properly administered, is safe and about 97 per cent effective in controlling these internal parasites. Among other control methods the publication mentions the rotation of sheep from worm-infested pastures to clean fields and grazing on high, well-drained ground. Copies of the leaflet may be obtained on application to the Office of Information, United States Department of Agriculture, Washington.

Larger Legume Acreage for Fertility of Soil

An ambitious program is sponsored by the State College of Agriculture for Kentucky, involving an increased acreage of alfalfa, sweet clover and soy beans. The objective is a million acres of each of these legumes, in addition to which there will be heavy seeding of lespedeza and other clovers suited to the South. Restoration of soil fertility is given as the main reason for restoring to legumes, though it is not the only gain that will come to the farmer. Regardless of present prices, which are by no means favorable to the grain growers, the safest policy is to include live stock in the farm program and to grow feed in sufficient quantity to provide for them. Balanced rations cannot easily be prepared without red clover, alfalfa or the more recent introduction, soy bean.

Having obtained a good stand of clover or alfalfa the labor cost, compared with grains, are considerably less, and in this way expenses are kept down: The experience of others in the neighborhood is the safest guide in choosing a legume. While each has its advantages, there are limiting factors to be kept in mind. Were alfalfa suited to all localities it might be generally recommended. If it does not thrive, there are clovers and vetches that will do very well in its stead. By all means give legumes a more prominent place, both for present results and future improvement of the land.—Exchange.

Disk Before Plowing

Disking ground before plowing in the spring may be the means of adding two or three bushels of corn per acre, in the opinion of John Slipper, state extension soils specialist. He cites experiments carried on in Nebraska over a period of six years, which indicate that corn yields there were increased about three bushels to the acre by this practice. This year in Ohio much of the plowing for corn has already been done due to favorable winter weather. Early spring plowing has decided advantages, Mr. Slipper points out, because it saves moisture and allows corn to be planted at the most favorable season. A week's delay in plowing may cause enough water to be lost on an acre to grow 11 bushels of corn.—Ohio Farmer.

Soil Tests Important

It is important that farmers have samples of soil tested frequently to determine the lime need for legumes. A recent study indicated that there is a great difference between different types of soil and their ability to hold the lime after it has been once applied to sweeten the soil. On one soil type, a moderate application of limestone may suffice for many years, while, on another type, frequent applications may be necessary, even though the original requirement was the same in both cases. It seems, therefore, that it is a very practical plan for farmers to use the farm bureau regularly and have samples of soil tested for lime needs.—Rural New-Yorker.

Farm Hints

Look after the lawn. Give it seeding where needed and scatter fertilizer.
• • •
Cherry trees respond more readily to nitrogen fertilizers than do apples or plums.
• • •
Early potato acreages, in the early and second-early potato states, are about 20 per cent less than last year's acreage.
• • •
Records kept on 137 hogs in Currituck county, North Carolina, showed they paid \$1.04 a bushel for all corn fed them.
• • •
Brood sows need exercise as well as good feed and care. If fed some distance from their quarters the sows will get exercise and feed, too.
• • •
Eighty-nine per cent of the corn grown in the United States is fed to live stock, according to the United States Department of Agriculture.

Finds Cheap Way of Enriching Soil

Stimulation of Nodule Formation Advised by Ohio Expert.

Legumes lacking nodules rob the soils of valuable nitrogen in much the same way as do corn or oats, according to H. W. Batchelor, assistant professor of soils at Ohio State university, who finds that nodule formation may be stimulated by inoculating the seed of such legumes as clover, alfalfa, soy beans, etc.
Inoculation of such seed, he says, tends to enrich the soil and may be accomplished at very little expense by using properly chosen field soil. Soil from fields producing soy beans having lots of nodules on their roots should be used in inoculating soy beans. Alfalfa may be inoculated with soil from fields producing good yields of either alfalfa or sweet clover, however, neither of these crops can be inoculated by soil from a field producing red clover.
After the desirable soil has been obtained, Batchelor suggests that the soil be sieved free from sticks and coarse sand or gravel, placed in the fertilized box of the grain drill, and sown at the rate of 100 to 150 pounds per acre in the row with the seed. This method has given very good results with soy beans.
Some farmers, he points out, do not have a satisfactory source of soil to use for inoculation, or prefer to use commercial preparations. Such preparations vary considerably in their effectiveness.

Kansas Farmer Has Way to Fallow Sandy Soil

Two fields of wheat stood side by side. One was taller than the other, and looked good for twice as much grain. E. E. Teagarden, extension agent in Stafford county, Kansas, wondered what made the difference, so he drove back and asked Ralph Sultor, the owner.
"Well," explained Mr. Sultor, "my soil is so sandy that it would blow away if I fallowed it. I know that summer fallow will increase wheat yields, so I put that field in partial fallow. Corn was planted in every third row. The rows were far enough apart to till with wheat machinery, and the corn kept sand and dust in check. I will get twice as much wheat from the field that was in partial fallow, and I had a corn crop extra."
Mr. Teagarden asked permission to determine yields in co-operation with Kansas State college. The fallowed field made 39.8 bushels an acre and the one that had been continuously in wheat 17 bushels.—Capper's Farmer.

Feeding Pigs Cream

Cow testers in 12 Kansas associations tested 99 separators in December and found five that were leaving over .05 per cent of fat in the skim milk. In one association where ten were tested, two were in the .05 per cent class. In a ten-cow herd that means 50 pounds or more of fat a year left in the skim milk. That's too much cream to waste on the pigs.
Separators should be tested—especially those that have stood idle for a while. If you don't know how to do it, or don't have equipment, get your county agent or separator dealers to do it for you. Then adjust the separator and replace worn parts. Better get a new separator than operate the old one at a loss.—Farm Journal.

A New Grain Sorghum

Wheatland milo, a newly developed grain sorghum, is reported to have yielded an average of 32 bushels per acre in commercial tests and 42.8 bushels per acre in experimental tests at the Fort Hays (Kan.) experiment station during a three-year period.
In normal season this variety will mature in about 100 days. Wheatland milo will probably do its best in the western half of Kansas and southward where a medium-early grain will mature.—Nebraska Farmer.

Look After Lambs

The farmer loses money when he delays the job of trimming the lambs. Early docking and castrating will not only reduce the feed costs but will improve the quality of the lambs. Trimming is getting to be a matter of first importance to the producer of lambs for market. In Michigan last year substantial premiums were paid for lambs cared for early. Docking should be done when the lambs are but a few weeks old and castrating soon thereafter.—Nebraska Farmer.

Worms in Hogs and Sheep

One of the most favorably known and newer drugs in use today among hog and feed men for treatments for worms is tetrachlorethylene. The value of this material as a worm expeller has been firmly established and endorsed by the leading authorities and in addition to its effectiveness it leaves little or no drug effects. Worm remedies such as tetrachlorethylene should be given in individual doses in capsule form to get the best results.—Indiana Farmer's Guide.

The Vegetable TONIC HERBINE CORRECTS CONSTIPATION

FLOYDADA DRUG CO., INC.

HI LEAGUE PROGRAM
The Hi-League of the Methodist Church will meet Sunday night, October 16, at 6:30 o'clock to render the following program:
Songs.
Prayer.
Scripture, Matthew 25:14-30.
Leader, Louise Gound.
We all have some talents, Mary Anna Ross.
What to do with them, Elizabeth Hollingsworth.
How shall we use them, Bert Ione Smith.
Can a Christian neglect them, Lois Covington.
Discussion questions.
League Benediction.

PASTOR'S PARTNERS B. Y. P. U.

Following is the program for the Pastor's Partners B. Y. P. U. for Sunday, October 16th:
Topic, Letters Old and New.
Living Letters, Bernard Borum.
The Human Author of the Letters, Dr. I. W. Hicks.
The Message of Each Letter, Minnie Anon Stanley.
To the Galatians, Lucille Burrows.
To the Corinthians, Mahom Linder.
To the Romans, Louise Condra.
To the Colossians, Geraldine Gambelin.
To the Ephesians, Francis Davis.
To the Philippians, Herwin Strickland.
We will have the regular monthly social Saturday night at the home of one of the sponsors, Dr. I. W. Hicks, beginning at 7 o'clock. All members are urged to be present.
Visitors and new members welcome to our regular meetings on Sunday evenings at the Baptist church.

Wilmer Jones, Jr., who is attending Texas Tech College at Lubbock, spent the week end visiting in Floydada with his parents, Mr. and Mrs. W. O. Jones. Mr. and Mrs. Jones took Wilmer to Lubbock Sunday.

Miss Jean Bain, student in Texas Tech College at Lubbock, spent the past week end visiting with her parents, Judge and Mrs. Kenneth Bain in Floydada.

Mr. and Mrs. Jesse Seale and family, of Plainview, visited in Floydada Sunday with relatives.

Why buy any second-choice tire when a **GOOD YEAR** costs no more?

The experience of tire-users is that Goodyear Tires give greatest value at every price—every year the public buys MILLIONS more Goodyears than any other make. That's a pretty definite indication of superior value.

ROUGH to your finger

means . . . **ROUGH IN YOUR STOMACH**

It's easy to say they're all alike—and easy to prove they are NOT. Dissolve a genuine Bayer Aspirin tablet in water, pour it off, feel the fine powder that coats the glass.
Do this with some other tablet; see what coarse particles are left! They feel as sharp as sand, even to your finger. How must they affect those delicate membranes which line your throat—your stomach?
For immediate relief from headaches, colds, sore throat, neuralgia or neuritis, lumbago, rheumatism, there's nothing like Bayer Aspirin. It cannot depress the heart.

FIRST METHODIST CHURCH

Rev. I. A. Smith, Pastor.
