

DIAMOND SPARKLES Friona Runs Over Bovina Sunday By Score Of 12 To 7

By ED WHITE

The Friona boys took Bovina to a defeat Sunday, by a score of 12 to 7, in a one-sided game. Renner was by far the outstanding player of the game...

Following is the score sheet for Sunday's game:

Table with columns for team name, AB, R, H, O, A, E and scores for Friona and Bovina.

Score by Innings: Friona 300 351 00x 12 10 11, Bovina 000 202 12 7 4 8.

Harvest Will Be In Full Swing Next Week

The 1949 wheat harvest at Friona, is getting started but won't get under full headway, probably before the first of next week...

Many Acres Still Untouched By Hail

A short drive through the surrounding communities reveals the fact that there are still lots of fields of fine wheat that has not been yet touched by the hail...

Attended Graduating Exercises

Mr. and Mrs. H. A. Hyde, and son Truell, attended the graduating exercises at Hardin-Simmons University on May 29 and 30...

Emmett Day, Jr. was home over the week end, accompanied by Glenn Hess, D. Hoges and Bobby McBrayer...

W.S.C.S. Begins Study Of China

A meeting of the Friona W.S.C.S. of the Methodist church, was held Tuesday afternoon. Mrs. J. H. Boyle was leader of the new study "China, Twilight or Day"...

False Notions Hinder Cancer Control

HOUSTON — False notions about the causes of cancer are hindering cancer control in Texas to a great extent, J. Louis Neff, executive director of the American Cancer Society...

Unfortunately, we do not yet know exactly what does cause this dreaded disease. Mr. Neff said, "What we do know, however, is that certain old fashioned ideas about cancer are not true..."

"Cancer is not caused by a germ or infection. It is neither contagious or infectious. Nor is cancer necessarily hereditary." Evidence indicates that children may inherit a certain degree of susceptibility which should make them more alert to warning signals...

"The American Cancer Society official pointed out that cancer results when certain body cells rebel against the orderly process of growth and start off on a rampage of lawless expansion, destruction and death."

"Until we do find the causes of cancer and develop additional methods of treatment," he concluded, "we must fight cancer with what we now know."

A CARD FROM MRS. FORD

The Star is in receipt of a card from Mrs. J. W. Ford, formerly of this community, but now of Ava, Missouri, in which she states that she has not been getting here a copy of the Star since moving to her new home.

AIRPORT NEWS

Friona Pilots Bring Home The Prizes From Air Breakfast

Local flyers and their friends attended an Airman's Breakfast at Littlefield Sunday morning. Friona also came with two of the prizes that were awarded to the flyers.

By BASCOM GILES, Commissioner of the General Land Office. (Editor's Note: Second of a series of articles on the Veterans' Land Program.) The recently enacted legislation implementing the Texas Veterans' Land Act...

Giles Says Procedure For Acquiring Land Under Vet Program To Be Kept Simple

By BASCOM GILES, Commissioner of the General Land Office and Chairman of the Veterans' Land Board. (Editor's Note: This is the concluding article of a series of articles explaining the newly created Veterans' Land Board Program.)

COGITATIONS and APHORISMS of Jodok. I have been doing quite a bit of cogitating during the past week, concerning matters generally, and I am beginning to wonder whether or not there is any system to our human existence...

COGITATIONS and APHORISMS of Jodok. I have been reading various books, each treating, or supposed to be treating, on various subjects, but it occurs to me that they all fit in pretty well together, and I find that they will treat of politics, religion, morals or ethics, and general ideas, and that it is rather difficult to say much on either of these subjects without getting one or more of the others included in one's remarks.

**BLUE CROSS MEMBERS**  
**QUARTERLY PREMIUMS**  
**MUST BE REMITTED**  
**BEFORE JULY 1st**

Mail To:  
**PARMER COUNTY FARM**  
**BUREAU**  
**BOX 522**  
**FRIONA, TEXAS**

**FRIONA**  
**January, 1929**

(Continued From Last Week)  
 Dairying: During the past few years dairying has been receiving much attention from the farmers of the Friona territory, and the dairy cow of varying breeds, is rapidly supplanting the range or beef breeds. There is rarely a farm that does not have from four to twenty good producing dairy cows, and these farms are paying all overhead expenses from the sale of the milk and

butter-fat produced by these cows. Farmers are also learning better methods of feeding and caring for their cows, and how to breed for profit.  
**Range or Beef Cattle:** There are still, however, a number of good herds of the beef type of cattle, of which the Hereford, or Whiteface, predominates, and several of these herds consist of registered stock only. Thus showing the desire of all the cattle men for the best that can be produced.  
**Friona Schools:** Friona has a consolidated Independent school district, comprising over 200 sections of this

splendid plains country. It has also a first class, affiliated high school, in a two-story brick building, containing fourteen class rooms, library, office rooms a large and neatly equipped auditorium, seating nearly 500 people; a commodious gymnasium, and all fully equipped with electric lights, steam heat, and sanitary indoor drinking fountains, toilets and shower baths.  
 This building was occupied by the school in January, 1924, with seven teachers in charge. It now (1929) employs fifteen teachers, all first class or better, with recommendations from the State Inspector of High Schools, that two additional teachers be employed. The school received full State Affiliation in the spring of 1927.

**The Friona Gin:**

We wish again to call attention to the fact that over 1,500 bales of cotton were ginned here during the fall and winter of '28-'29, making an average of at least half a bale to the acre, the ginning being done by the gin of the Friona Gin Company. This gin is a completely new outfit, having been built new from the foundation to the top, and is equipped with the most modern and efficient ginning machinery. It is second to NO gin on the plains country for efficiency, and the largest within a radius of over a hundred miles. A good cotton market has been established in connection with the gin. The cotton acreage will be trippled for the 1929 crop.

**Products:**

The Friona country produces any and all crops that can be grown on the Plains, and they are so numerous and varied that it is difficult to name them all.

Friona's Grain Crops included, wheat, corn, rye, barley, oats, panic, kaffir, milo, maize, beggar, fetterita, corn, for many years, has not considered a profitable crop, but during the past three years it has been grown extensively and with great profit, easy thousands of bushels, both shelled and on the cob, have been brought to Friona this season, (1928-1929) and sold on the local market.

Friona's chief forage crops are sorghum, sudan and millet. Sweet clover is becoming popular as a hay and pasture crop, though as yet, comparatively little has been grown.

Practically all kinds of vegetables can be successfully grown here, including sweet and Irish potatoes and an abundance of garden truck. Some of the best celery ever eaten was grown at Friona, with perhaps, no more pains and labor than is required to produce it elsewhere.

Friona's home grown fruits include apples, pears, peaches, plums, cherries, grapes, strawberries and other small fruits. No finer or richer flavored fruits are grown anywhere.

**Churches:**

Friona has four organized churches, viz: Baptist, Methodist, Congregationalist, and Church of Christ. Three of these organizations already have comfortable houses of worship; thus the spiritual life of the community is not neglected.

**Hog Raising:**

Hog raising is also proving to be one of the most profitable lines of industry for the Friona farmer; this industry having come to stay when the number of hogs shipped out from Friona each year is increasing. Whereas, a decade ago, there was but one carload of hogs shipped out of Friona each year, the shipments now range from one to five carloads each week, and these largely produced from registered foundation stock, showing the pride the grower takes in striving for the best in this as in other branches of farm industry.

(Continued next week)

**Chants**  
 of the  
**Chanticleer**

We went into White's Cash Grocery recently and called for a bottle of "Cross-Grained" shoe polish. Ed said he did not have any of that kind but he had some that he thought was much better.

Ed showed us a pair of shoes that had been polished with this new brand, and he said he had been wearing the shoes for over a year, and they looked as though they were brand new. We did not get us WRONG. We did not say Ed had been wearing that coat of polish over a year; he said he had worn the shoes for over a year, but we do not think he had worn them at all since the last coat of polish was put on them. But they sure did look fine and we bought a bottle of the polish, and the name was on the box and we read it, but we can't tell you what it was.

There is a story in another column of this issue of the Star, telling about a new kind of sweet corn that is being grown by George McLean. The story is perfectly all right, and is told just as we understood it from George. It is interesting and is straight goods. Nothing fictitious or fallacious about it. But when George began telling us about it we were reminded of a story we heard one of our cousins, Henry Frazer, tell us less than 130 years ago.

The story came about something like this: One of Henry's neighbors who, when he told anything about anything, if the thing had been any bigger he would have said so, and it was about a crop of corn he had ripening in his field. "The stalks," the neighbor said, "are ten feet high and each one has an ear half as long as a man's arm, and some of them have two ears."

"That's mighty good corn," said Henry, "but it is not near as good as some my cousin raised over on the island. The stalks were 12 feet high and each stalk had two large ears and a 'cow-rubbin' as long as your arm in the tassel."

As we were writing these chants, Wednesday morning, two of our good friends entered our sanctum for a short chat and to pass the time to day. They were George Baker and Floyd Reeve, and during the quips our memories recalled a trip we had made during the fall of 1896, which took us through Corinth, Miss., where we spent one whole day during which we visited the old Corinth battle ground with earthen redoubt and magazine of the Federal Army. And that is what recalled this trip to our memory. George was telling us about one of his sons who is in the army, and had been stationed at Fort Bliss, where he had charge of the Ordnance Department, which includes the "compound" where the ammunition is kept, which place was formerly known as the "magazine." At Corinth we saw our first cotton gin and cotton compress, and we also visited the National Military Cemetery, that is located at that city. Our journey also took us through Mobile, Alabama, and that is where we saw our first oysters in the shell just as they had come from the oyster beds, in the bay there, and we saw men taking the oysters from the shells, and occasionally putting one into their mouths and swallowing it, by way of a "free lunch." We described that performance as accurately as we could but our narrative failed to excite any expressions of appreciation from either George or Floyd, but it did remind us of a story we read many years ago, about an Irishman who stepped into a cafe—then known as a restaurant—and ordered "fresh" oysters for his lunch—then known as dinner. When the oysters were served, Pat put one into his mouth and it slipped down his throat, but immediately came back into his plate. But Pat tried it a second and a third and on the sixth time, but with the

same results. Mr Oysters refused to stay "put." At that point a tall "hill-billy" came in and Pat asked him if he liked fresh oysters, and the hill-billy said, "sure, he did." Pat then said, "try this one." The tall man accepted it and tossed it into his mouth and stood looking at the remaining oysters on Pat's plate. Pat eyed him for a minute or two, then said, "And can yez kape it daoun?" "Sure," said the

hill-billy. Then said Pat, "Yes can sure hate me. Oi had him down six tomes, but he came back up ivery toime." Just at that time both George and Floyd remembered that they had other matters on hand and abruptly took their departure.

Then there was the coed who said: "It's the little things that tell," as she yanked her kid brother from under the sofa.

## Built In Lighting Gives Dramatic Touch to Rooms When Added to Your Present Furniture

By Mary E. Webber  
General Electric Home Lighting Specialist

If you enjoy dramatic touches in your home, why not consider the possibility of adding built-in light to some of your present furniture?

Many ready-made pieces take on new beauty and importance when it boasts its own built-in lighting. The Modern, Provincial and Early American desks pictured above each have fluorescent lights concealed above the writing surface to provide light for letter writing or sessions with household accounts. At the same time, built-in lighting over windows, mantels and in furniture will give a subtle and dramatic touch to almost any room.

Ready-made furniture will take on new beauty and importance with its own built-in lighting. The Modern, Provincial and Early American desks pictured above each have fluorescent lights concealed above the writing surface to provide light for letter writing or sessions with household accounts. At the same time, built-in lighting over windows, mantels and in furniture will give a subtle and dramatic touch to almost any room.

Ready-made furniture will take on new beauty and importance with its own built-in lighting. The Modern, Provincial and Early American desks pictured above each have fluorescent lights concealed above the writing surface to provide light for letter writing or sessions with household accounts. At the same time, built-in lighting over windows, mantels and in furniture will give a subtle and dramatic touch to almost any room.

in lighting provide light for letter writing but also adds an interesting glow and lift to the side of the room on which the desk is placed.

**Moderate Cost**  
Another interesting treatment is shown in the upper right photograph. The handsome Early American secretary-type desk has a trim 20-watt fluorescent light installed in the lower shelf above the pigeon-holes to give an abundance of shadow-free light on the writing surface. To give you some idea of the cost of these installations, both the lighting equipment and installation fees totaled less than seven dollars. (Many a household handyman could do this installation himself, thus reducing the cost still further.)

When the desk opening is snugly fitted with drawers as in Provincial secretary shown in the inset circle at the lower left, smaller fluorescent lamps can often be placed in an opening made by removing several drawers. In the secretary above, General Electric specialists removed the center drawers and placed an 8-watt fluorescent lamp (12 inches in length) in the opening. An especially curved, polished chrome reflector was needed behind the lamp to direct the light on the writing area.

**Measure Carefully**  
Although many people are not installing their own fluorescent lights in furniture as well as in window valances, don't overlook the fact that unlike regular bulbs, fluorescent does need special auxiliary equipment and space must be allowed for it. If you are using it for the first time, measure carefully and buy your lamps and other equipment accordingly.

Fluorescent lamps vary in length according to wattages and while they are made in lengths from six inches to eight feet, once your auxiliary equipment is installed, you cannot interchange the lamps as you do with ordinary bulbs and sockets.

## The Washington Merry-Go-Round

BY DREW PEARSON

**Forrestal's Death**  
M<sup>R</sup>. WESTBROOK PEGLER has issued an array of charges aimed to make his readers believe that my criticism of the late James Forrestal largely contributed to his death. Mr. Pegler has now been answered by me in the only language he understands—a libel suit.

But for more intelligent people who may have read the Pegler column, I should like to set forth the following facts:  
1. AFTER I reported on Mr. Forrestal's mental illness, there was little other reference to him by me either in the press or on the radio. I did compliment him on his cooperation with secretary of defense Johnson and I also suggested that he be given a long vacation at government expense.

2. AT THE TIME of my radio references to Mr. Forrestal's illness, he was under sedatives, was not permitted to listen to any radio programs or read the newspapers.  
3. THE NAVY immediately issued a statement which had the effect of denying Mr. Forrestal's illness. If the navy, on the other hand, had taken proper precautions instead of minimizing the facts, Jim Forrestal would be alive to day. Navy doctors knew, as they now admit, that he had made earlier suicide attempts in Florida.

They also knew that every other medical institution in the country puts patients with suicidal tendencies on the ground floor. Unfortunately, navy doctors minimized the facts in their treatment, which may have been why they called Mr. Forrestal's illness "nervous exhaustion" and put him on the 16th floor of the hospital tower.

4. CAPT. George Raines, the navy doctor in charge, has since made the following amazing statement: "I recognized the well-known psychiatric fact that the next 30 days would constitute the most dangerous period of the illness as far as suicide was concerned. I felt that the assumption of responsibility must rest on my shoulders and not be shared with the family or other naval authorities."  
And after admitting that this was the most dangerous period, the man who assumed responsibility departed for Canada.

### Forrestal's Friends

5. IN THE END it may be found that Mr. Forrestal's friends had more to do with his death than his critics. For those close to him now admit privately that he had been sick for some time, suffered embarrassing lapses too painful to be mentioned here.

Illness such as Jim Forrestal experienced does not come all of a sudden, like a fall from a horse. It begins months in advance. And such an illness cannot be pushed aside or overlooked. It must be treated. Yet during most of last winter, when Jim Forrestal was under heavy responsibilities and definitely not a well man, the little coterie of newspapermen who now insinuate Jim was killed by his critics encouraged him to stay on. This got to be almost an obsession, both on their part and his, until Mr. Truman's final request for his resignation undoubtedly worsened the illness.

6. THE REAL FACT is that Jim Forrestal had a relatively good press. All one need do is examine the newspaper files to see that his press was far better than that of some of his old associates.

Secretary of Labor Perkins, for instance, was one of the most criticized cabinet members of the last decade. He took it with a smile and is still working for his country. Winston Churchill had other criticism heaped upon his head and suffered one of the most crushing political blows in recent history. However, he still remains an active force in British politics. Herbert Hoover retired from office one of the most criticized and beaten-up political figures of recent years. Yet he has come back as a definite force for good government.

### Cl Probe

7. IT IS TRUE that when Jim Forrestal retired, the justice department was in the process of investigating the Arabian oil purchases made by the navy during his administration. I feel sure this did not involve him personally, though he was known to be dreadfully upset by it.

8. IF WE ARE to withhold criticism of a man because of possible illness or danger to his life, then congressional investigations, a free press, and our entire system of government by checks and balances becomes difficult.

For instance, when the FBI cross-examined the late Lawrence Duggan of the state department during last summer's un-American activities committee probe, they had no idea he would thereafter plunge to his death from a New York office building.

## Invasion Of Mesquite Alarming To Livestock Raisers

LUBBOCK—The invasion of mesquite on range and pasture lands of Texas and other parts of the Southwest has been progressing for many years, but only in recent years has it reached a condition that is both alarming and of major concern to livestock raisers, according to an article by C. E. Fisher, assistant agronomist at the Spur Experiment Station, in the July number of *Southwestern Crop and Stock*. The article says mesquite is undesirable because it reduces productivity of grassland, and greatly increases the labor and difficulty of efficiently managing and caring for livestock as well as hindering the use of desirable range improvement practices.

Citing records showing the mesquite occurs on 55 million acres of grassland in Texas, Fisher cites reasons for the extreme difficulty of control or eradication of the range growth, lists growth habits of the brush, and discusses progress in control experiments at the Spur station during the last 16 years.

He says different methods of attack are necessary because of the great variation in growth forms of mesquite ranging from dense thickets of many-stemmed plants to few large single-trunked trees 40 feet tall and two feet in diameter; second, soil; third, size of the range unit; and other factors.

The specialist who has been associated with the experiments at Spur since 1938, says that to effectively control mesquite, it is necessary to destroy the dormant sprout buds on the underground stem. These occur from

three to eight inches below ground level. Various chemical agents have been tried with varying degrees of success, but no general all-around satisfactory and economical method has yet been found. Contact agents used include kerosene, diesel oil, and light oils applied to underground stems, but have proved too costly under special conditions.

Sodium arsenite has been found most effective and economical among chemicals. It is quickly absorbed by the plants and can be applied by various methods, but is highly poisonous to animals as well as plants, and its use, therefore, is greatly limited.

Mr. Fisher lists several mechanical methods of control or eradication, such as the widely used grubbing plan, grubbing with power machinery, cutting, mobile tree saws and bulldozing. Most of them are effective if properly done, but are called laborious and costly.

In recent years, experiments have been carried on with 2, 4-D and 2,4-T, with some success when moisture conditions were favorable. Kills were mostly in top growth, however, and vigorous sprouting usually took place 30 to 120 days later. Sprays have been applied by various ground methods, and from airplanes. Fisher holds out hope that the hormone chemicals—2,4-D, 2,4,5-T and other similar ones—hold much promise as the ideal materials for control of mesquite, but further development is needed to where consistent and lasting benefits may be obtained.

### News Notes From Messenger

By Mrs. J. N. MESSENGER

guests of Mr. and Mrs. George Messenger Sunday.

Saturday evening, June 18, we had another rain of one and 45 hundredths inches, accompanied by lots of lightning and hard wind. It washed grass at ditches in the fields. Three miles south and a mile east, the rain was about the same. There it let up and men were planting in the fields as we went to Sunday school and church Sunday.

George C. Messenger had a birthday Saturday, June 18 and his daughters, Elsie and Rosalie, presented him with a nice floor lamp as a birthday and Father's Day gift.

ments that were being presented, and one cannot read or list very long to discourses on politics until he runs up against both communism and socialism, and just what is either of them or both of them? In looking in the dictionary I find very little distinction by the definitions that are given, except, as I have stated many times before, socialism may be a little milder form of communism.

If the human mind was freed from all its impurities, it may be that these two isms, either or both of them, could be the ideal plan for existence, but until such a condition is reached, humanity will be left to its own fate in such matters, thus depending on the evolutionary system, which, history has taught us, is extremely slow. Humanity is just not yet ready for such plans of existence in all matters of economic and social living, or such a stage of morals or ethics.

There are some phases of socialism that are already being, and have been in existence within our government curriculum; such as our common school system, our postal system and our system of public highways, and one can scarcely imagine any possible betterment in these systems by placing them under the control of private enterprise. I am free to admit that all systems have their merits and are so constructed as to fit in somewhere in the great social and economic plans. After all, mental evolution will be left to decide this question of socialism or free enterprise.

Now I find that instead of airing my political views, that subject has led me off into mention of evolution, socialism and the effects of cosmic influence, as is

## "BUGGIES WILL NOT LAST"

"It's short-sighted to think the buggy will last much longer," said Henry Timken fifty years ago when there was talk about the new horseless carriages being a fad that would not last.

Now, after fifty years, "Old" Henry, as he was affectionately called, could, if still living, look upon The Timken Roller Bearing Company as it is today and be well pleased with the truth of his statement. As the company that bears his name celebrates half a century of progress in the manufacture of roller bearings for industry throughout the world, there should be more than a passing nod given to "Old" Henry and men like him who made our industrial progress possible.

Shown above is a buggy that some people thought could never be replaced by the gasoline car. There was even an attempt to lobby for anti-automobile legislation. Below is one of the stream-lined cars of today. Inset shows Henry Timken, founder of the business that helped make the automobile the speedy, economical job it is now.

I am moving my scrap iron to vacant lot between Bug Collier and Gleen Revee. G. F. Williams. 49-1c

**For Sale**—New model "D" tractor, below list. C. F. Loflin. 49-2p

illustrated by a quotation from Peter Molyneux little magazine, "The Southern Weekly," of June 15th. (Quote)

"Two voices are raised against the socialistic trend in popular thought in America. Former President Herbert Hoover, speaking at Ohio Wesleyan University points out that 'the judgement of the Lord on Adam (to eat bread in the sweat of his face)' has not been entirely reversed, even by the Supreme Court of the United States.' And Dwight D. Eisenhower in his first commencement address at Columbia declares that the fundamental struggle of our time is between individual freedom and government control." (End quote)

I have frequently stated that for starting and continuing any worthwhile move for the good of humanity, there is no better, nor even so good a place for it than in our public schools, and one of these reforms is that of a world-wide and lasting peace. There is no doubt that the evolutionary process can be abetted by human effort. I will quote an expression relating to his from Lecompte DeNouy in his book "Human Destiny."

(Quote) "The fight to suppress future wars must be waged in our schools. If this is not done in time, the actual governments will be responsible for any conflicts that may arise, and the bravest man trembles at the thought what they will be." (End quote.)

Any erroneous reflection upon the character, standing or reputation of any person, firm or corporation which may appear in the columns of the Friona Star will be gladly corrected upon its being brought to the attention of the publisher. Local reading notices, 2 cents per word per insertion.

Three youth from Friona and three from Bovina were delegates to the annual summer assembly sponsored June 6-11 on the campus of McMurry College Abilene, by the northwest Texas conference Methodist Youth Fellowship. They are Vera Ann Jones, Marilee London and June Moody, Friona; and Robert Berggren, Billy Ray Derrick and Jimmy Ware of Bovina.

The summer assembly this year was under the direction of Rev. W. A. Appling, pastor of the First Methodist Church, Vega. Platform speaker was the Rev. Hubert H. Bratcher, St. John Methodist Church, Lubbock; and the Rev. Dewitt Seago, Seminole served as registrar.

## How To Grease Your Own Car

1. Put on your dirtiest clothes so you can crawl under your car.
2. Buy a supply of transmission, differential, universal joint, water pump and pressure grease, a grease gun and a spray gun. Also some penetrating oil and No. 40 oil.
3. Equip yourself with lots of strong words such as "Darn," and "Oh, Hang," and the like to use on the joints where the grease doesn't want to come through. Keep using these words until the grease comes out the other side.
4. Buy yourself a complete set of wrenches to use on the containers that must be opened to inspect the lubricating supply inside. Also some new skin to graft on your knuckles when the wrench slips.
5. Fill your spray gun with penetrating oil to spray on the springs. Be sure not to breathe for about ten minutes while spraying the springs or you may oil-plate your lungs, which is bad.
6. Be sure not to miss any place that should be lubricated as it may cost you the price of twenty grease jobs for repairs.

OR

if this seems like too much trouble and expense, drive your car in here. We can assure you, if you get our "Guaranteed Lubrication" — you just won't try that home job again.

The most Beautiful BUY of all

Reeve Chevrolet Company

Three new ways to help critically sick dogs live longer and better lives were described by nationally known veterinarians at a recent convention of the American Animal Hospital Association in Chicago.

Dr. Carl F. Schlottbauer, staff veterinarian at the Mayo Foundation in Rochester, Minn., told of a new surgical method for removing heart-worms from dogs. The operation is performed under anaesthesia on the right ventricle of the heart, and the patients "get along very well" afterward, he said.

Dr. Myron Thom, of Pasadena, Calif., said that experience gained in treating cancer of human beings is being applied directly to the treatment of this disease in dogs. "We have found that x-ray therapy is indicated in at least 50 percent of the cancer cases in pet animals," Dr. Thom reported.

Dr. Lloyd C. Moss, member of the veterinary medical faculty at Colorado A. & M. College, declared that special feeding formulas—as carefully compounded as formulas for human babies—are speeding the recovery of convalescent pets. These preparations, containing nutrients essential to rapid repair of diseased body tissues, are designed for ease of digestion and assimilation, he said.

## No time lost

**getting ready**  
Think of attaching a cultivator in one minute or less! It can be done with a Ford Tractor and Dearborn Cultivator. Other tools, too, attach or detach quickly.

**going to the field**  
You need not hold down road speed to "save" Dearborn Lift-Type Implements. They are carried instead of dragged. You gain working time and save repairs.

**working in the field**  
Moving the Ford Tractor: Hydraulic Touch Control lever up or down controls the depth of ground working implements. No tugging at ropes or levers.

## Plus the advantages of a "LIGHT" and a "HEAVY" tractor

While working, most Dearborn Implements become almost literally a part of the Ford Tractor. In the case of any implement designed with "suck," the suck adds weight on the tractor's rear wheels . . . you get, automatically, more weight when you need it, less weight when you don't.

The Ford Tractor is "fast on its feet," economical. Gives you speed and easy handling on "light" jobs, such as mowing or cultivating.

In breaking sod and similar hard jobs, "suck" adds the effect of additional weight, giving you a "heavy" tractor when you need it.

When you buy "DEARBORN" you buy QUALITY
