LUCKIES ARE A FINER CIGARET

Constant research at Lucky Strike's famous cigarette laboratory-America's largest and most completely equipped—is devoted to giving you a finer cigarette!

THERE is no finer cigarette in the world today than Lucky Strike. Here's why: Lucky Strike means fine tobacco. And every step in the making of Luckiesfrom before this fine tobacco is bought until the finished cigarette reaches you-comes under the watchful eye of the largest and most completely equipped cigarette research laboratory in America.

For many years, the famous Lucky Strike laboratory in Richmond, Virginia, has been a center of cigarette science and technology. In this remarkable building you can see a fascinating collection of scientific instruments - microscopes, spectrophotometers, balances, projectors, humidification chambers, and many other complicated and costly machines.

Working with this array of scientific equipment are more than 60 highly trained specialists-chemists, biologists, engineers, physicists. They work on tobacco, on finished cigarettes, on paper, foil, cellophane and even printing inks. For Lucky Strike scientists have for years delved into cigarette research on an extensive scale.

Today, because of the miracle of modern science, Lucky Strike is a finer cigarette.

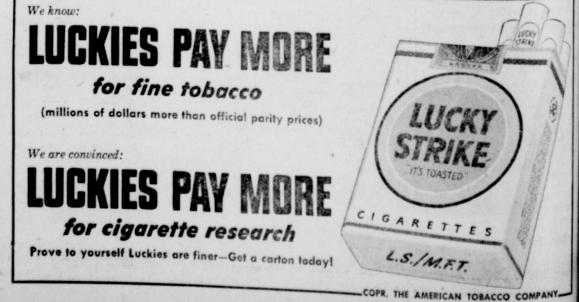

Testing tobacco. Samples from every are analyzed before and after purchase. These extensive scientific analyses, along with the expert judgment of Lucky Strike buyers, assure you that the tobacco in Luckies is fine, light and mild. No wonder Luckies are a finer cigarette.

Luckies stay fresh. After Lucky Strike ci rettes have been packaged, they must be tight sealed to remain fresh. Here you see the cello phane seal being tested for air-tightness. Suchinstruments are in constant use at every plant.

Research leads the way. Only constant, painstaking, exhaus tive research-as conducted on a large scale through the years by The American Tobacco Company-could produce the scientific knowledge that results in the quality of Luckies.
