### Carp Control Is Seen As Success

AUSTIN, July 10. — The Assistant Chief of Aquatic Biologist of the Game & Fish Commission said success of rough fish control work this year gives promise of expanded future operations.

He said chemicals have been profitably utilized to knock out concentrations of carp and buffalo in several areas, including Lake Austin.

He added that studies have shown that rough fish eradication is indispensable to modern fish management since mere restocking is not sufficient to maintain adequate fishing resources.

The principal damage from rough fish is that they not only crowd out the game fish but they also utilize some foods that ordinarily would be available to the young game species.

Feed crops and pastures deteriorated as the early summer drought intensified over much of the state during the past week. Older cotton was still holding on, but young cotton was deteriorating, with some dying. Widely scattered mid-week showers in the northwest and week-end showers along the coast brought temporary relief in these favored local areas, but soaking rains were needed in all areas.

Wheat harvest was practically completed, cotton picking was becoming general in the lower valley, and combining of a large grain sorghum crop was at about the peak in the coastal bend. Cotton in virtually all areas

was needing rain, particularly young plantings in southern plains counties, which were dying from lack of moisture. Older plantings in west Texas were holding on fairly well despite the dry weather, but growth has been slow and moisture was urgently needed. Earliest plantings on the low rolling plains were beginning to fruit and a few squares were reported on the north high plains. Crops along the Red River in the blacklands district were beginning to bloom.

In eastern districts the crop was making fair progress, although insects were numerous where not controlled by poisoning. Coastal Bend cotton was speeding excessively and some bolls were opening prematurely. In south Texas irrigated crops were fruiting heavily but dry land cotton was needing rain to maintain growth and check shedding. Picking was becoming fairly general in the lower Rio Grande

valley, where weevils continued active and pink bollworm infestation was heavy in many fields. All feed crops were showing the effects of continued hot, dry weather. A considerable acreage of corn was being cut for fodder or silage in some areas, particularly in northcentral and east Texas. Grain sorghum harvest was at a peak in the coastal bend area, yields being excellent. Farmers in northwest areas were waiting for rains before planting the remainder of their sorghum acreage. Except for the early acreage that was near maturity in south Texas, the crop was needing moisture badly. Weather was favorable for hay harvest, but growth for later cuttings was at a standstill. Rice progress was normal.

Peanuts in northcentral and northeast Texas continued to make fair growth, although rain was needed in most areas. In south Texas moisture was needed badly for planting the fall crop and for development of early peanuts. Castor beans made fair growth but were beginning to need rain. Harvest of broom-corn was active in the southern counties with some of the earliest sections through. A light harvest was started in north and central Texas.

Range and pasture feed was deteriorating over much of the State as hot, dry weather continued. Except in scattered local areas where showers have fallen, range grass was cured and livestock were showing some shrinkage. Local showers on the high plains and along the upper coast were helpful, but State-wide rains were urgently needed.
