COLONEL CODY ("BUFFALO BILL")

By ELMO SCOTT WATSON

the average American who was the original "Buffalo Bill" and the chances are that he will answer without hesitation "Why, William F. Cody, of course." And therein he will be

wrong, for there were at least two other men, who earned that title and were known by it, before William Frederick Cody made it famous throughout the civilized world. This does not mean that Cody did not deserve the title, for he won it away from one of the others, fairly and squarely, in one of the most spectacular contests ever staged on this continent. But it does not detract any from his fame to pay tribute to the prowess of these other two and to set forth their claims to having been the "original Buffalo Bill," even though Cody was the greatest "Buffalo Bill," with all that that title implies.

The man from whom Cody won his title by "right of conquest" was William Comstock, a celebrated guide, hunter and one of the favorite scouts of General Phil Sheridan during the Indian war on the southern plains in 1867-69. Comstock is one of the "mystery men" of the frontier, in that but little is known of his early career. Pub-He interest in him has been revived recently by the Wisconsin State Historical society, as shown by the following story sent out by the University of Wisconsin news service:

Some Wisconsin town is entitled to considerable fame as the birthplace of Indian scout who was a comrade of Buffalo Bill during his romantic pre-circus days. Comstock is known to have been born in Wisconsin and to have left early to go west and be-

The state historical society, according to Charles E. Brown and Alfred Barton, Madison, is anxious to learn where he was born, who his relatives were, and from what part of Wisconoin he went west.

Colonel Homer Wheeler, formerly of the Fifth cavalry, who knew Comstock when he was chief scout and Interpreter at Fort Wallace, Kan., devotes part of a chapter of his book "Buffalo Days," published by Bobbs-Merrill, to Comstock. He is the authority for the statement that Comstock was "born in Wisconsin of good parentage and left home at an early age and was one of the original pony express riders at the time Cody and Wild Bill were similarly employed. He was the first owner of the Rose Creek ranch, situated on that stream, about eight miles from the post."

During his service at Fort Wallace Comstock had gained such renown as a buffalo hunter that for some time he had been known among the officers there as "Buffalo Bill" Comstock. In the meantime, William F. Cody, who had done some scouting for the troops at Fort Ellsworth and Fort Fletcher, had been offered a job as bunter by the Goddard Brothers, who had contracted to feed the laborers who were building the Kansas Pacific railroad ern Colorado). Comstock and Grover

proved himself a skillful hunter and filled his job so well that one of the workers made a jingle about him which went as follows:

Buffalo Bill, Buffalo Bill, Never missed and never will; Always aims and shoots to kill And the company pays his buffalo bill.

His fame as a buffalo hunter was spread by the officers at Fort Hays and came to the attention of the officers at Fort Wallace who believed that their "Buffalo Bill" Comstock had more right to that title than the Fort Hays officers' "Buffalo Bill" Cody. So they raised their share of a purse of \$500 to be given to the winner of a buffalo killing contest between Cody and Comstock. Soon posters began to appear in the stations along the new railroad which read as follows:

GRAND EXCURSION FORT SHERIDAN Kansas Pacific Rallro BUFFALO SHOOTING MATCH for \$500 A SIDE

CHAMPIONSHIP OF THE WORLD BILLY COMSTOCK (The famous scout)

W. F. CODY (Buffalo Bill) Famous Buffalo Killer for the Kansas Pacific Railroad.

Since the Kansas Pacific railroad was arranging the excursion, it was perhaps natural that it should give the title "Buffalo Bill" to its hunter. But their confidence in him was soon justified. The match was held 20 miles east of Fort Sheridan where buffalo were plentiful and the prairie was level enough for the great crowd of spectators (including Mrs. Cody, who had come on an excursion train which had been run from St. Louis) to see the chase. Cody was mounted on his famous hunting horse "Brigham" and armed with his equally famous needlegun "Lucretia Borgia." Comstock used a Henry rifle which shot faster but did not hit so hard.

Having located a herd of buffalo, the two men rode into it, followed by referees. The herd split, with Comstock chasing one bunch and Cody the other. Cody soon had his bunch running in a circle and he dropped 38 of them, all within a small space. Comstock, who rode at the rear of his bunch shooting them down, killed 23 but they were scattered over a route of three miles. After a short rest another herd was sighted and again Cody was the winner by a score of 18 to 14.

The third run of the day was the occasion for a spectacular stunt by Cody. He took the bridle and saddle off Brigham, dashed into his bunch of buffalos and shot down 12 more. then drove the last directly toward the wagons from which his wife and some of the other spectators were viewing the match. When the great beast was less than 50 yards from the wagon be sent it tumbling to the earth as the grand finale of the bunt. His final score was 69 to Comstock's 48. Cody continued to hunt for the Kansas Pacific until it reached Sheridan and in the space of 17 months he killed 4,280 of the animals, an additional reason for his right to be known as the champion buffalo slayer of the

A few months after this match Comstock's career came to a tragic close. While out on a scouting expedition on Walnut creek with Lieutenant Beecher (later killed at the battle of the Arickaree or Beecher's Island in eastChief Turkey Leg of the Cheyennes, who was a special friend of both scouts, on the headwaters of the Solomon to learn if any of his people had taken part in a murderous raid in the Saline valley. Their reception was very cool one and finally Turkey Leg told them that they had better leave, since his young men were greatly excited and he could not control them.

Accordingly they started out, accompanied by the chief's son and six other young warriors who professed the deepest friendship for the scouts. But in the midst of a friendly conversation some of the braves fell quickly to the rear and opened fire. Comstock fell from his horse at the first fire, instantly killed. Grover, badly wounded, also fell to the ground. Then, using the body of his dead comrade to protect himself, he opened fire on the of range. For the rest of the day he darkness, he managed to escape and reached Fort Wallace two days later. half dead from the pain of his wound | sides. and the exhaustion of his long jour-

have a claim to the title of "Buffalo Bill." prior to Cody's, "Nearly thirty the arena in every capital in Europe and America, a rival claimant was five seconds to fill with air. brought forward as the original possessor of the title," writes Richard J. Walsh in "The Making of Buffalo Bill," published by Bobbs-Merrill last year. He continues:

was William Matthewson of a. It was said that in 1860, the year of the great drought, when grass-hoppers darkened the Kansas skies and fell on the crops as thickly as a bliz-zard, Matthewson had gone out to kill buffalo, sending back wagontrains of meat to feed the starving settlers And in their gratitude they dubbed him Buffalo Bill.

"How did William Cody happen to call himself Buffalo Bill?" an interviewer asked Marthewson

"Well," he replied, "you see Cody worked for me when he was a young fellow. I reckon he had begun to read Indian stories and see how much was to be made by that kind of a reputa-tion, and he was always fond of talk and show I never was any hand to wear my hair long and go swaggering around the country blowing about what I had done. Cody knows he had no real right to the name, but if he wants to show off as a dime novel hero. I have no objection."

The querulous outbreak shocked and son He replied: "I never laid eyes on him and of course never worked for him. But this is the first intimation I have ever had that any reputable person other than myself has ever claimed the title of Buffalo Bill. A few years ago there were as many wild yellow flowers that gave their name to the state. It reminds me of a portion of a sonnet finishing: But as fondly loves on to the close.

As the sunflower gives to his God as

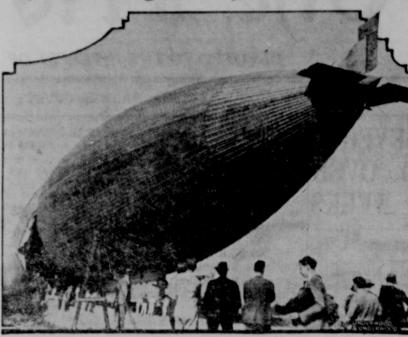

he sets The same look he gave as he rose.

The aptness of the quotation was not made clear by the interviewer.

Considering that in the sixtles the plains were black with fifteen million buffalo and that thousands of men were buffalo and that thousands of men were killing them. It was not atrange that many a nickname was based on the magic word. There was Buffalo Jones, there was Buffalo Chips, and there were other Buffalo Billa.

"But Cody seems to have won the title fairly." says Walsh in conclusion and then tells of the famous contest with Comstock, after which "the ref erees declared Cody winner of the prize money, and, by the same decision so he claimed, finally confirmed nisright to be known as Buffalo Bill."

Metal Dirigible City of Glendale

Powered by gasoline motors instead of by steam, as Capt. Thomas Slate, the inventor, had planned, the all-metal dirigible City of Glendale is shown being taken from its hangar for final grooming and testing. The conversion to steam power will be made after experimental flights have been executed.

### PLANE LANDED WITH A GIANT PARACHUTE

#### Safety Appliance May Be Standard Equipment.

San Diego, Calif.-Parachutes large enough to lower a crippled plane to the ground, several of which have proved successful in experiments, may soon become standard equipment for mail and passenger planes. One of the leading parachute companies will be ready to equip air lines with them in about six months.

Capt. Roscoe Turner, commercial aviator, landed a plane with one of the large parachutes at Santa Ana, Calif., last spring. His test was not wholly successful, as the landing gear of the Thunderbird plane was demolished when the ship struck the ground. On the other hand, when a pilot is forced to desert his plane and resort to the ordinary type of paracute it results in the wrecking of the

The parachute used by Captain Turner, and by Carl Osle for an earlier test, is the invention of J. M. Russell.

### Has Series of Valves.

Working on a parachute that had to be fifty or sixty feet in diameter, Russell found that the greatest difficulty was in getting such a large piece of silk to open out after it was released. The device that he perfected to overcome this difficulty is a series of

The parachute has three rings of valves, or vents, in the fabric, one in a circle around the top, another several feet below the first and a third about half way between the lower edge of the silk and the center of the Indians and quickly drove them out parachute. When it is released the air forces the first series of vents to The parachute is filled, not from underneath as in the case of the small instrument, but through its

As soon as enough air has accumulated in the top of the parachute it Nor was Comstock the only one to forces the valves shut from inside. when the second series opens, brings in more air which closes them. and years later, after the name had rocked | the third series operates in a similar manner. The parachute requires about

### Cheaper Than Separate 'Chutes.

A parachute fifty feet in diameter is large enough to support a plane that carries three or four persons. A thirty-passenger plane, Russell believes can be supported in a parachute ninety feet in diameter. The plane is fastened to the parachute by four lines from different points in the fuselage. holding the plane steady.

The cost of a parachute large enough for a thirty-passenger plane would be about \$3,500. This would be less expensive, however, than provid ing separate parachutes for each pas senger. Most operators believe it un wise to provide individual parachutes. even aside from the question of expense, as they give rise to fear among passengers. The large parachute. which would not be seen by the passengers, would have no such effect upon them.

The parachute is carried in a cyl-Inder above the fuselage. It can be released instantly by the moving of a lever. In case of a fire the parachute could be released, freeing the pilot and other members of the crew from the controls so that they could fight the fire, which would be easier to control when the wind-stream from the propeller had stopped.

### Length No Criterion of Size of Dirigible

Dirigibles being of such great length, the average person is inclined to compare them on the basis of the distance from the stem to the stern of the bag. A convincing illustration of the error of this is revealed in the comparison of measurements between the new metal dirigible and the Graf Zeppella. The former is about one-fifth as long but only onetwentieth the size of the latter.

"Size" is a matter of cubic feet content of the bng which holds the lifting gas. The dirigibles being built for the navy at Akron. Ohio, are not much longer than the Graf Zeppelin. but their size fairly dwarfs the Ger man ship

### WARNINGS OF ICE GIVEN BY A DEVICE

### Most Serious Problem of Winter Being Solved.

Los Angeles, Calif.-King Winter is discovering that his assaults against the planes of a western air transport company are unavailing this season due to a little device that sets against the leading edge of one of the wings, which looks and performs a function similar to a thermometer.

It is called an ice-warning indicator and when a thin film of ice, which forms when the air temperature is about 32 degrees, begins to collect on the top wing surfaces, the pilot is notified and he sends the ship either up or down, to fly into warmer or colder air.

As a result, not one plane of the air transport company has been forced to descend because of ice particles which alter the curved surfaces of the wings. The small instrument which conveys this all-important information to the instrument board before the eyes of the pilot, has demonstrated its value several times be tween Albuquerque and Kansas City.

Everett Drinkwater, superintendent of maintenance, has announced that all the planes of the company are now equipped with the instruments, including mail and passenger ships.

The problem of preventing the ice from forcing ships down has long bothered aviation engineers. Efforts to heat the wings have failed. The greatest difficulty is that pilots are seldom warned until their ships start to settle and all the power of the motors fail to keep the plane in flight. The ice-warning indicator meets

### 

### German Firm's Rigid Blind Flying Course

Washington. - The Deutsche Lufthansa has established a course in blind flying at its Berlin-Staaken base in order to accustom traffic pilots to night flying or through fog by the aid of instruments alone, according to a report from Assistant Trade Commissioner A. Douglas Cook

The Deutsche Lufthansa has equipped three different types of planes in such a manner that two pilots are seated side by side, one having an unobstructed view and the other sitting in a small cockpit in which frosted glass or shutters produce the effect of flying in fog or darkness. This latter pilot can see nothing but his illuminated instru-

From the accompanying pilot he receives orders after the start to hold a certain course, change the course or carry out any maneuvers. Possible mistakes can always be corrected by the second set of controls.

### Air Industry Employs Nearly 25,000 Workers

Washington.-Nearly 25,000 persons are now employed directly in the manufacture of airplanes and airplane motors in the United States, a survey made by the Department of Labor re-

Aside from manufacturing, the industry also gives employment to much labor both directly and indirectly. Factories and hangars must be built; pilots both for mail and commercial work must be employed; schools of instruction are coming into existence; and many mechanics and other ground employees are needed at air fields.

Employment also is given to persons engaged in the manufacture of material used in planes. Airplanes also have their effect on the production, distribution and consumption of

gasoline. Plants manufacturing airplanes are found in 29 states, New York being the most important with 4,396 employees. This is followed by California with 1,605 employees.

Other states with more than 1,000 persons employed in the making of airplanes are Michigan, Washington Kansas and Ohlo.

#### Keeps Leather Heels, But Walks on Tiptoes

One of those rising young executives who dresses in a collegiate manner changed firms recently. His new posttion took him into the office of the president several times the first day. At each entrance, he noticed that the president glanced up at him with unfavorable expression hovering an over his face.

The next morning he was summoned in before the president, who asked, gruffly: "Of what material are the heels of your shoes?"

Upon being told that they were of leather, the president exclaimed: "I thought so. Your pounding in and out of this office was too much for me yesterday. Suppose you walk on your iptoes hereafter."

The young man is inclined to be somewhat stubborn at times; that is why people who enter the concern's office are surprised to observe him walking about on his toes. He has vowed not to change the material in his heels.-Springfield Union.

### Vacations Help Trees

Trees, like human beings, should be allowed to have a vacation occasionally, according to George P. Weldon, not pomologist, Southern California's mate is too good for a number of rieties of peaches, apricots and apples, and if something happens to prevent the trees bearing fruit for one season they show renewed life and greater production the next season, according to Professor Weldon.

This "vacation" for the tree may be occasioned by a severe winter, which would cause the tree to lie dormant.

He Knew the Game David-How did Phil manage to get

ois interested in him? Harold-He managed to get Jane interested in him.

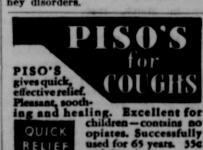

### Clean Kidneys By Drinking Lots of Water

Take Salts to Flush Kidneys If Bladder Bothers og Back Hurts

Eating too much rich food may produce kidney trouble in some form. says a well-known authority, because the acids created excite the kidneys. Then they become overworked, get sluggish, clog up and cause all sorts of distress, particularly backache and misery in the kidney region, rheumatic twinges, severe headaches, acid stomach, constipation, torpid liver, sleeplessness, bladder and urinary irritation.

The moment your back hurts or kidneys aren't acting right, or if bladder bothers you, begin drinking lots of good water and also get about four ounces of Jad Salts from any good pharmacy; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to flush clogged kidneys and stimulate them to activity; also to neutralize the acids in the system so that they no longer irritate, thus often relieving bladder

Jad Salts cannot injure anyone; makes a delightful effervescent lithiawater drink which millions of men and women take now and then to help keep the kidneys and urinary organs clean, thus often avoiding serious kidney disorders.

### Caring for Automobile in the Winter Season

which swept over the greater part of the country, many thousands of automobiles could not be started after being parked in the open. The mechanical first aid department of the Chicago Motor club offers the following aids to starting in frigid tempera-

1. Ask the agency of your car or a reliable filling station the lightest lubricants, compatible with safe lubrication, in the crank case and gear

2. Before stepping on the starter see to it that the gear shift lever is in neutral and depress the clutch pedal. Open the hand feel throttle one-quarter of the way or more. 8. Step on the starter and use the

choke sparingly. 4. If the starter cannot spin the motor, set the spark at full retard and pull sharply upward with the crank, This quick motion will frequently start motors when the starter

5. When it is expected that the car will remain parked in the open for a long period, it is wise, when shutting the motor off, to speed it slightly and then shut off the ignition and choke it at the same time. This procedure causes a gasoline vapor to be present in the cylinders when the motor is

### \*\*\*\*\*\*\*\*\* Gabby's Arm Mended

Gabby Hartnett thinks he's almost ready to open the season. After a month of treatment for his million dollar throwing arm which blew a fuse last spring and made him useless for the 1929 campaign the Chicago Cub backstop believes the ailment has almost vanished.

During the recent subzero blast | next started. This practice should used infrequently, however, as the gasoline drawn into the cylinders tends to seep past the pistons into the crank case, where it dilutes the oil. The oil should be changed frequently if this trick is resorted to re-

6. The ignition system and carburetor adjustment must be correct in order to enjoy easy starting.

### Infielder Toporcer Has

Traded Jobs Many Times George Toporcer, the infielder who wears glasses, has belonged to the same organization for ten years, but

has changed jobs eight times. Toporcer was discovered by Ernest Landgraf who was president of the Syracuse club, which was partly owned by the Cardinals then, and later became their outright property. Toporcer went to St. Louis in 1921 went back to Syracuse the same year,

and wound up with St. Louis. Specs stuck with the Cards steadily until in the 1928 season. He started that year with the Cards but was sent to Rochester (the club that was moved from Syracuse), and again returned to St. Louis.

George started the 1929 season once more the property of the Rochester club, then changed again at the end of the season, but complications arose and the deal was declared off. George now definitely belongs to Rochester.

### Anti-Freeze Mixture

There are "anti-freeze compounds" on the market, consisting of calcium or magnesium chlorides. These, mixed with the water, will keep it from freezing, but the chemicals will cause the radiator to corrode within, with the danger of its cracking.

Some of these mixtures, however, now add a soluble chromate which prevents corrosion. In this case, such a compound is favorable as an anti-

### **\*** Cubs Have Brilliant Fielder

THE Cubs have a right fielder at present whose work is second to none. Some say that Cuyler's play at present is not as good as that of 1925 when he starred for the Pirates. This point is the cause for much debate.

His hitting is around the .250 mark, his stolen bases are more than any other player in either league and his right arm has infused more timidity into the hearts of base runners than any other outfielder. A man on second thinks twice before darting for third after "Kiki" has nabbed a fly in any sector of the field.

Pitchers have told how much Cuyler has improved himself at the plate. Their statements tell that before this year Hazen couldn't hit a curve ball on the outside. Now they are skeptical about throwing one ball in that vicinity. As Cuyler progresses in the art of hitting, pitchers are leary about throwing them any place, especially when the paths are loaded. That would make a dangerous hitter of

Cuyler began his career on a large scale with the Pirates in 1923 and stayed there until the end of the 1927 season, when he was traded to the Chicago National league team.

Cuyler's worst year with the bat came in 1928 when he was handicapped by a hand injury the first part of the season. The finish was strong enough to boost his average to .285, his lowest.

### Further Attack Is Made on Subsidizing of Athletes

Foundation for the Advancement of Teaching made a further attack on the subsidizing of athletes by colleges and universities in a speech before the Sportsmanship brotherhood. Mr. Savage declared that although the practice of recruiting high school and preparatory school athletes "probably is diminishing gradually," the situation still "is so serious that it should engage the attention of every sports

"The recruiting of athletes is no simple matter and its rights and wrongs are not so immediately obvious as one might wish," said Mr. Savage, "The practice seldom, and probably never, exists without the use of subsidies. As the fisherman baits his hook, so the recruiter dangles the subsidy before the eager eyes of the the in the same place.

Howard Savage of the Carnegle | preparatory or high school athletes. So widely recognized are the practices that a complementary practice has developed among schoolboys, known as 'shopping around,' in which the schoolboy without waiting for overtures from the college or its recruiter, may offer by correspondence and even by telegraph his athletic services to the highest bidder among the colleges."

### Powder Coated Rag Will Prevent Short Circuits

A short in the high tension wires leading to the spark plugs, caused by moisture, usually occurs where the wires are clustered together.

When this happens, dry the wires. one at a time, with a cloth on which is placed a generous amount of either soapstone powder or face powder, preferably soapstone. In drying the wires entering the distributor cap be rareful not to remove more than one

Drying High Tension Wires With Powder-Coated Rag Avoids Short Circuits From Moisture.

wire at a time unless it is well understood how to replace them.

Keeping the wires and the outside of the distributor cap exceptionally plean and using soapstone in the manser described will result in keeping the rubber insulation in good condi tion and no trouble will be experienced from rain. Of course, this suggestion applies only to ordinary rubber-covered high tension wire. Specal high tension wire covered with varnished fabric should not be treated in this way. Such wire should be wiped with a clean dry cloth only .-Popular Science Monthly.

Hero Was Remembered was the honored guest, and a friend presented Don to the governor.

"Governor," he said, "this is Don Miller. He is one of the 'Four Horse-

"Well, well," the governor greeted him affably. "I certainly am glad to meet you. I enjoyed the picture immensely. It was a great picture."

#### \*\*\*\*\*\*\*\* THE MOTOR QUIZ

How Many Can You Answer? Q. Under what conditions is horn blowing useless and when should liberal use of the horn be made?

Ans. Horn blowing is useless in traffic jams because it not only fails to clear the jam but causes confusion and many times angers others concerned. The proper place to make liberal use of the horn is when passing other cars, driving on curves, mountain roads and blind intersections on country roads.

Q. What three bad practices shorten the life of tires? Ans. Turning corners at high speed, thereby shifting the weight of the car to one side; sudden stepping on the accelerator, causing the wheels to spin; rushing up to corners and slamming on the brakes

Q. If spark plugs are missing what particular trouble would be likely to develop?

Ans. Owing to incomplete combustion gasoline may go by the pistons and rings and into the crankcase, with consequent of! dilution, causing excessive wear to moving parts, hearings, cylinder walls, and pistons. It is also accompanied by loss of power on hard pulls, hard starting, slow pick-up, and generally speaking it produces a sluggish

Q. What was the increase of gasoline consumption and exports for the first seven months of 1929 as compared with the same period for 1928?

Ans, Consumption increased 14.6 per cent and exports 13 per

## Short Sighted!

\*\***\*\*\*\*** 

To postpone the purchase of materials for the erection or repair of the necessary buildings on the farm or for the city home, merely because it will call for an outlay of additional cash or credit, is short sighted.

If this investment is postponed until actual necessity forces us to make it, we will be faced with a larger investment, loss of time, comfort, convenience and sk to life, health and happiness. See us for plans, prices, terms and service.

### "Lucile is the Happiest Girl"

nowadays talk about giving their childre fruit juices, as if this were a new discov ery. As a matter of fact, for over fifty years, mothers have been accomplishing

results far surpassing anything you can secure from home prepared fruit juices, by using pure, wholesome Cali-fornia Fig Syrup, which is prepared under the most exacting laboratory supervision from ripe California Figs, richest of all fruits in laxative and nourishing properties.

It's marvelous to see how billious, weak, feverish, sallow, constipated, under-nourished children respond to its gentle influence; how their breath clears up, color flames in their cheeks, and they become sturdy, playful, energetic again. A Western mother, Mrs. H. J. Stoll, Valley P. O., Nebraska, says: "My little daughter, Roma Lucile, was constipated from babyhood. I became worrled about her and decided to give her some California Fig Syrup. It stopped her constipation quick; and the way it improved her color and made her pick up made me realize how run-down she had been. She is so sturdy and well now, and always in such good humor that neighbors say she's the happlest girl in the West."

Like all good things, California Fig. Syrup is imitated, but you can always get the genuine by looking for the name "California" on the carton.

### To Cool a Burn Use HANFORD'S Balsam of Myrrh All dealers are authorized to refund your money for the

### Too Much Emphasis Put

On Declaration of Age?

The demand of public officials that the citizen declare his age on every pretext is a piece of obnoxious bureaucracy. You do not need to tell your exact age in order to vote. The women saw to that in short order. But you must tell it in order to obtain a motor vehicle license.

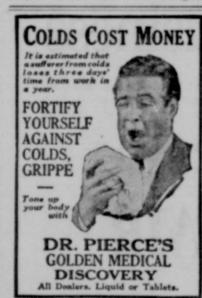

Two million persons in the next few months will need to write down their ages for the perusal of license bureau clerks or any traffic officer. The plea that this is necessary for police purposes is ridiculous. Identification can be made by other means in emergencles. A crook who was trying to "beat" identification would not be greatly distressed by this requirement.

Dr. Charles E. Jefferson of the Broadway Tabernacle church, spoke out two years ago against age requirements on passports, licenses and the like. If more would speak out, a change to a proper basis would be speedy.

Persons might be required to state if they are "of age." But that is sufficient.-New York American,

### Railroads in United States

Counting all sidings, yards and multiple tracks, there are approximately 375,000 miles.-New York Telegram.

Deserved Leniency

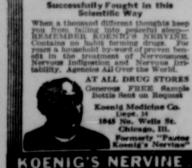

In traffic court at Fort Worth, Texas, an elderly woman who had a "ticket" bestowed on her for falling to observe a boulevard stop sign, told the judge that the city street department's activities in the vicinity of her arrest had made the thoroughfare so bumpy that her glasses were shaken off and she could not see the "Stop" sign. "Case dismissed," said the judge; "that's a new excuse, and I always dismiss for new excuses."

CHAPTER XII-Continued -29-She regarded him with the same

pitying expression which had trked him the day before. "Thank you," she answered quietly,

"but if we may, sir, we'll stay here. Doctor O'Shaughnessy will require assistance." "But you don't realize! Round-shot

"I'd rather see the worst things than crouch below and imagine them. And I'm not one to faint and stew, Captain Fellowes."

wounds are hideous. And grape!"

"There's Mr. Inglepin," Fellowes suggested, "and your attendant?" "I may be a fool," Ben Inglepin retorted tartly, "but I can wind a bandage or hold a basin-and I prefer anything to the darkness and stench of

the orlop, which, I suppose, is where you'd put us." "'Tis safe, at least," asserted Fellowes, puzzled.

"Why, sir, if we must believe you, we are by no means safe, wherever we are.

Fellowes looked at the duenna, dark, fat, immutable, jetty eyes squinting from the folds of her mantilla.

Cara said quickly: "The senora can help, too. She will be much better for having something to do. Come, sir, do not sentence us to the hold! Your wounded will be more comfortable for what assistance we can render." She appealed to O'Shaughnessy. "You'll confirm me, won't you, doctor?"

The Irishman supported her gallantly.

"'Tis short-handed we are, captain, and with none but the stewards for dressers I'll be in a bad way."

It was a good argument, Fellowes admitted to himself. He owed his men every chance for life, and three extra belpers might turn the scale for the poor devils, whose bodies were maimed by the Badger's carronades. "Very well," he agreed, "if you are certain 'twill not distress you. Once

"You speak of being in action, Captain," the girl exclaimed. "How soon

we are in action, you must remain

-will it be?" "Within the hour," he answered

curtly, and withdrew. Ascending to the deck, he rehearsed in his memory the fearful expectation mirrored in her face. She knew what he planned for Collishawe, and dreaded it. Well, he'd give her ample to weep over. When he'd finished with the Englishman-

The Centurion, at Fellower direction, were handsomely, and stood nor'east-by-nor' on the la'b'd tack. The Kadger, apprehending the maneuver indicated the Yankee brig intended to come to close quarters, commenced to take in her mains'l and clew up her after canvas.

Fellowes studied their progress, as the interval of blue water diminished with the persistent attempt of the Badger to point up higher than the Centurion, and when he thought the range was right for the twenty-fourpounder he halled Cuffee!

"Aboy, gunner! We'll try the Long

Cuffee's first shot skipped the waves in front of the sloop-of-war's bow. The next ricocheted over the enemy, but the third was a clean hit for'ard of amidships, and the Centurion's company raised a lusty cheer. Colli shawe, undaunted, yawed to bring his chasers to bear, the twelve-pounder shot splashing up the water perhaps a quarter of a mile short of the tar-

Cuffee fired a fourth time, and scored a bit in the waist.

"Come, come, lad, 'tis a spar I want," Fellowes called impatiently.

The next shot was an over, clean betwixt main and mizzenmasts, and Collishawe, apparently appreciating the weight of metal against him, came about once more, and stood down before the wind, bow-on, in an effort to close, so that his heavy broadside batteries could come into play. But Fellowes was alert.

"Steady all," the order came from the speaking trumpet. "Rake him, Cuffee. Mr. Spencer, hold your fire until I bid you loose."

Working with frenzled speed, Cuffee had the Long Tom loaded and fired almost before Fellowes had finished speaking. The shot struck the Budger on a level with the cat-heads. A second shot drilled the hull under the sta'b'd fore-chains, tossings a shower of splinters in air.

"Now, then, Mr. Spencer," Fellowes halled the first lieutenant.

And the lab'd twelve-pounders roared as one. All but two or three missed, but Fellowes was sure one shot had waistled through the forestays and a second hit the hull. He was satisfied.

"We'll go about, Mr. Noggle," he bade the salling master. "On the sta'b'd tack." It was time. As the Centurion

wore, the Badger's chase guns flung their shot into the privateer's bul warks with telling effect. When the confusion had abated Fellowes saw one man dead on his deck, and two others wounded. The Badger had

teeth, and knew how to use them.
"Carry those men below," he or dered. "Bosun, where are your sand

The Badger pegged away with her chasers, but the Centurion ran out of

range quite easily and wore ship to give the Long Tom another chance. And an exultant yell greeted Cuffee's next performance—the main topmast of the slop-of-war tumbled slowly from the fidds in a sprawling litter of spars and canvas. Momentarily helpless, the Badger flapped up into the wind, and Fellowes swooped nearer for the benefit of his twelve-pounders. The broadsides roared as fast as the gun

crews could swab, load and fire. But Collishawe was a seaman. Before the privateer could smash another stick, he had the wreckage cleared from his deck, and the Badger manageable-and Fellowes must sheer off to avoid those hard-battering carronades that would rend the brig to matchwood at close quarters.

A half-dozen more shots from the Long Tom, and the Badger's foremast, probably weakened by the hit in the chains, went overside in a clutter that

The Centurion Wore Handsomely.

dragged the sloop-of-war down by the head. Fellowes stood on, making use of the predicament to gain a position astern of her, but by some incredible effort, Collishawe was able to run both his long twelves aft, and in the face of a scorching fire from the Centurlon's sta'b'd battery, actually succeeded in shooting away the brig's fore-topmast, blanketing the Big Sarpent, killing one of Cuffee's gun crew and

drowning a pair of Sopher's marines. Fellowes, coolly determined to take no unnecessary risks, promptly retired out of range, cleared the wreckage from his fo'c's'le, and again ordered Cuffee to resume sharp shooting. The negro had warmed to his work, and the Long Tom burled its shot into the crippled sloop-of-war with appalling regularity.

Fellowes called to Cuffee: "Take your time, gunner; but I want you to knock over another stick."

Cuffee's response was a clean hit in the Badger's mizzenmast, which broke midway to the top, and swamped the whole waist with its debris. The sloop-of-war broached to, all but helpless, while the Centurion headed across her bows, broadside batteries flaming as she tacked back and forth, back and forth, the Long Tom adding its resonant voice to the sharper detonations of the twelve-pounders. The smoke was banked so densely around the privateer that the enemy was practically invisable; but an answering broadside roared from the sloop-of-war, and the Centurion quivered under the impact of the carronades' eighteen-pounder shot.

"Sta'b'd your helm, Mr. Noggle," hailed Fellowes. "He's swung his head around."

### (TO BE CONTINUED)

Probable Age of Earth The Naval observatory says that it is believed that the solar system has existed in approximately its present form for many millions of years; but from our present knowledge on this subject we cannot state what may have been its condition at any definite period in the remote past, such as 500,000,000 years ago. A recent estimate, found in "Astronomy," by Russell, Dugan and Stewart, gives the earth's age as possibly some four or five billion years, but this is subject to future revision if other factors in the problem become known. It is supposed that the day was formerly somewhat shorter, and the moon somewhat pearer the earth than at present.

### Meerschaum

The chief known deposits of meerschaum in the United States are in Grant county, New Mexico. Meerschaum taken from these deposits, says the Geological survey, is very similar in appearance to that obtained from the famous deposits in Asia Minor as it appears on the market ready for carving. The Asia Minor product, however, is somewhat lighter and more spongy.

### Cargo Sailors Dislike

Many common cargoes have some curious and unpleasant characteristics. Sugar, for instance, gives off a powerful and often poisonous gas. It has also a sickening odor, and you cannot get the sweet taste out of your mouth. The men simply crave vinegar or lemon juice - anything The motifs are then pasted smoothly sour. "Deliver us from sugar" is the on the parchment shade. To gain the sailor's earnest prayer.

## Pretty Thing/ that are made at Home

and a thousand-and-one other alincements "long winter evenings" have almost become a tradition of the past Assuming, however, that time does hang heavy on yet a few of the feminine clan, we submit suggestions of ecorative things for the home, which. o make, provide fascinating pastime for leisure hours.

One of the most popular arterafts of the moment is illuminating or handpainting on glass The very attractive

THAT with movies, bridge parties | "relief" effect, the designs are then built up with molding clay. After all is thoroughly dry, paint with melted sealing wax.

Frocks for Girls. Contrasting materials for little girls' frocks is a call of the advance mode. A popular idea is to button or sew a skirt of one color to a blouse top of a different color and oft-

The dress in the lower picture carries out the idea well. It is a French

en a different material.

dihouette panel at the top of this lustration is an "illuminated glass icture." Seen in the original it is ery colorful. The work involves sevral very interesting processes which can merely be suggested in this brief However, the materials and instructions are easily available in departments where art materials are sold or wherever fancy crepe papers, sealing wax and such are sold for flower making and other ornamental knick-knacks.

The various steps include the cutting out of figures from decorated crepe tissue paper, also painting these in with opaque paint (dissolved sealing wax) on the reverse side of the glass. To give color to the scene the foliage and ornamental details also sky effects are painted in with transparent effects.

The final touch is achieved with very thin silver, gold or bronze paper worked in so as to illuminate the entire in a brilliant way. As valentine gifts small pictures worked in this

paint.

model, for which the designer chooses a cherry red wool for the skirt, the upper portion of the frock being made of eggshell colored silk which is dot ted with red. In this instance the skirt is buttoned onto the blouse, the usual straight around effect being varied with a clever point at the front waist-

A favorite style for younger girls is the button-on skirt with a contrasting tailored blouse. The skirts can be made of most any material such as challis, poplin, broadcloth or lightweight tweed, all of which are suitable for spring. The blouses are usually of faille, satin or silk crepe, these being simply trimmed with ruffles of self fabric at the collar and cuffs and lown the front closing

This idea of using two materials for the making of a frock should be kept in mind by mothers who are entering in upon a prespring sewing campaign. For this styling remnants can be used to advantage. So often lengths of goods are left over from the makings of grownups' frocks, which are not quite enough to make little daughter of the household an entire garment. way would be most unique and highly It needs but a little contrasting ma-

#### KING OF CLOUDS

"Have you any idea how old you are?" asked the King of the Clouds of the Sun.

"I haven't," said Mr. Sun. "I really have been so busy all my life that I have never counted the time. I've left that to others.

"Besides I don't know arithmetic and I would have to know arithmetic to figure it out."

"What's arithmetic and who can do it?" asked the King of the Clouds. "Arithmetic is a lesson they study in school. School is a place where children go to learn about all sorts of things such as how to add two and two and how to spell words.

"They learn how to talk beautifully and they find out where they live

"They also study about other places and about the seas and the moun-

"Gracious," said the King of the Clouds, "I am glad I don't have to

go to school "So am I," said Mr. Sun, "but they seem to be quite happy. I suppose

"The Very Idea I Had in Mind."

they become just as used to it as we do to shining and raining." "I suppose so," said the King of the Clouds. "But why are you hav-

ing such a frolic today?" "I heard the earth whispering to the breeze," said Mr. Sun, "that some of the raindrops were leaving.

"The earth said that Mr. Sun was drawing them to him, and I laughed for it was quite, quite true."

"I think I'll have to have a frolic soon," said the King of the Clouds. So the sun continued to draw water from the earth through his powerful ray workers. What fun he did have and how he laughed and sparkled and A few minutes later some wild ducks

flew high up in the air. "Where are you going?" asked the

"We're going to fly far out in the

bay," they said. "Do you see?" And they pointed with their wings.

"I think," said Mr. Sun, "I will join as in the house. That is one cruel tive stories doesn't teach you anything you. I will move along slowly and indictment of the indoor life. will shine where you go, for the King of the Clouds sent some of the army of raindrops out there this morning." "To be sure I did," said the King

of the Clouds. "Well, if you go out there, they can come in here. We'll just change places, eh?" "The very idea I had in mind," said

"Are you coming, are you coming?" called the wild ducks, "We are in a great hurry today, for we need good, quick flying to make us feel better. "We're greatly in need of exercise."

"I'm coming, I'm coming," said Mr.

So Mr. Sun followed the wild ducks out into the bay, and then he shone down over the great ocean.

The raindrops left as soon as Mr. Sun appeared, and they began to play about and where Mr. Sun had been shining and where he had been drawing the raindrops from the earth.

So Mr. Sun and the King of the Clouds kept changing places and such

a jolly time as they had of it. The King of the Clouds said it was such a merry, merry time.

### An Indoor Game

Any number of players can join in the game of Questions and Answers, and you can play it indoors. The players must sit in two lines facing each other, so that they are really in pairs. Two of the players are called Question and Answer. Now Question goes all along the line and, without anyone else hearing whispers a question into the ear of each of the players in his line. On the other hand, Answer goes down his line whispering an answer into the ear of each of the

Then the game begins. The first player of the line says aloud the question he was given. The player opposite replies in the answer he was given. For instance, the question might be, "What's the time?" And the reply might come, "It used to, but It died." Another instance: "Have you got any money?"-and the answer, "The cat buried it in the garden."

### New Kind of Marbles

Mother-Tommy, I was very glad to see you playing marbles with Willie Brown when I looked out of the bedroom window.

## The upsets of Children

'All children are subject to little upsets. They come at unexpected times. They seem twice as serious in the dead of night. But there's one form of comfort on which a mother can always rely; good old Castoria. This pure vegetable preparation can't harm the tiniest infant. Yet mild as it is, it soothes a restless, fretful baby like nothing else. Its quick relief soon sees the youngster comfortable once more, back to sleep. Even an attack of

colic, or diarrhea, yields to the soothing influence of Castoria.

Keep Castoria in mind, and keep bottle in the house-always. Give a few drops to any child whose tongue is coated, or whose breath is bad. Continue with Castoria until the child is grown! Every drugstore has Castoria; the genuine has Chas. H. Fletcher's signature on the wrapper.

That cold may lead to something serious, if neglected. The time to do something for it is now. Don't wait until it develops into bronchitis. Take two or three tablets of Bayer Aspirin as soon as you feel a cold coming on. Or as soon as possible after it starts. Bayer Aspirin will head off or relieve the aching and feverish feeling—will stop the headache. And if your throat is affected, dissolve two or three tablets in a quarter-glassful of warm water, and gargle. This quickly soothes a sore throat and reduces inflammation and infection. Read proven directions for neuralgia, for rheumatism and other aches and pains. Genuine Bayer Aspirin is harmless to the heart.

## Our New Elevator Has Been Completed

BUT THERE IS ONE BUILDING WHICH WE HAVE NOT YET COMPLETED, on which we are forever at work, and which must remain forever unfinished.

Its foundations go deeper than the soil, its spires reach beyond the jagged summits of skyscrapers, its architecture is more beautiful than any that ever emanated from the draughting rooms of human design. It is a building which takes a lifetime to build but only one day to destroy-a structure which only honor can erect, and, when demolished, no money can restore.

As we were saying, the new elevator in finished. But we are still at work on the Cathedral of Public Confidence.

For years this firm has been an integral part of this section, aiding in its growth and development by locating the best market for your farm products. This enables us to always pay you top market prices for your grain.

Our connections in all terminal Markets of the United States enable us to keep abreast with market conditions.

It Will Be Our Pleasure to Have You Visit Us Any Time. TOP MARKET PRICES
