

NORTHWEST TEXAS EDITORS TO MEET HERE NEXT FRIDAY

ANNUAL CONVENTION TO LAST TWO DAYS—MANY FEATURES PLANNED.

NUMBER OF TOPICS WILL BE DISCUSSED

Two Lumbermen and Baseball Game Will Be Among Entertainment Features.

Ralph Schiffer, publisher of the Olney Enterprise and secretary of the Northwest Texas Press association...

Some Observations on Primaries And on Folks Who Go Into Them

By a Peevish Democrat. When Joe B. Hatchett, in the county democratic convention on July 23, sought to have this county's delegates instructed to start a move...

"Why, I didn't think you had any use for Jim at all." "I haven't," the other replied, "but if we make him supervisor he'll do something crooked and get sent to the pen, and the county will be rid of him..."

There were three Mayfields on the ticket on July 23 and they all ran pretty well. Earle B. Mayfield for senator and Billie Mayfield for Houston for lieutenant governor...

MORE FOLKS USING KEMP LIBRARY NOW THAN EVER BEFORE

A new record for circulation of books was established by the Kemp public library during June and July, the average number called for per day...

DREDGE TO BEGIN WORK ON MAIN DAM EARLY NEXT MONTH

CONDUITS RAPIDLY NEARING COMPLETION AT STORAGE SITE.

WATER SHORTAGE IS CAUSING SOME DELAYS

Several Sub Contractors Handicapped—North Side Survey Is Progressing.

Everything will be in readiness for the dredge to start work on September 1, as per schedule, judging from present indications at the storage dam.

Some delays are being encountered on parts of the project by a shortage of water; this shortage is handicapping sub-contractors at work on concrete conduits along the south side canal...

WICHITAN GIVES INTERESTING SIDE LIGHT ON LIFE STORY OF DR. ALEXANDER G. BELL

One of the great, though unheralded, triumphs of the career of Alexander Graham Bell, the inventor of the telephone, who died last week, was his restoration of the power of speech to Mrs. Bell, after she had been a mute for many years.

T. F. HUNTER GIVES A COUNTRY PICNIC TO ALL EMPLOYEES

CLAY COUNTY CORN CROP SHORT RESULT DROUGHT

HENRIETTA, TEXAS, Aug. 5.—The corn crop in this locality, with the exception of that along Red river, is a total failure.

THREE UNION BARBERSHOPS ARE CLOSED BY THE CITY

WATCROSS, GA., Aug. 5.—Three union barbershops here were closed today by city authorities because of alleged refusal of the barbers to serve non-union workers of the Atlantic Coast Line.

K. K. K. PARTY IS BROKEN UP WITH MUCH SUDDENNESS

A while ago I held a hand. No dainty and so neat I thought my heart would burst with joy. So wildly did it beat.

No other hand unto my soul. Could greater solace bring. Than what I held awhile ago, which was Four aces and a King.

Four sang a member of a Klu Klux Klan party at a party Saturday evening at 9:15 o'clock. At 11:15 another hand sent him hurrying to the front door by some one called "Cheese it, here comes the bull."

Scott street as well as Seventh street was the scene of a track meet. Four men hurriedly made their way to the first alley. Four members of the sheriff's department were running a close second. In fact, so close that two fell into the hands of the law. They told the names of the other two.

10 a. m.—Welcome address—Mayor Frank Collier.

Advertising and Business Management—Discussion led by Sam A. Roberts, Haskell Times Press.

Advertising Methods—Advertising managers, Wichita Falls Daily Times and Wichita Falls Record News.

Co-operation With the Advertiser—J. E. Hillingsley, Hutchinson Post.

Commercial Printing and Its Problems—Prices and Price Lists—Claude Wells, Wellington Leader.

Wages and Hours—Round table. Selling the Product—Ralph Shuffler, Olney Enterprise.

Improved Methods and Machines—J. E. H. Ralley, Bailey-O'Brien-Stromquist Co.; R. B. McDonald, Midwest Printing Co., Wichita Falls.

Address by State Press—Joe J. Taylor, Dallas News; subject to be selected by Mr. Taylor.

West Texas Chamber of Commerce—Whitney A. Whisley, Stamford.

Selection of next meeting place.

HUNTER ADDS 75 BARREL WELL TO FOWLER'S STATION

T. F. Hunter brought in his No. 4 well on lease No. 2 in the North Fowlers station Friday evening. The well is good for at least 75 barrels and was brought in from the 1,600-foot sand.

TWO CARS AND TRUCKS OF ENGINE LEAVE TRACK BUT ALL ESCAPE INJURY

TULSA, OKLA., Aug. 5.—Two cars and the trucks of the engine of a St. Louis, San Francisco train carrying soldiers of the Kansas national guard were derailed Saturday five miles east of here, early today.

The train was enroute to Fort Hill, Okla., and was heading into, sliding down the embankment. It was said. Officials of the division terminal of the road at Sapulpa said they believed the derauling was caused by the train wheeling into the siding, causing it to jump the track. It was emphasized that the trucks had not been tampered with.

The fact that the train was running slowly at the time of the accident, probably prevented serious injuries to some of the Kansas guardsmen, an agent pointed out.

McDermott is the second local boy to go to the naval academy in July. The first was William M. Bays.

Prof. Einstein Leaves Germany, Fears Assassin

LEIPZIG, Aug. 5.—Prof. Albert Einstein, originator of the theory of relativity, has fled from Germany, it was reported today.

Although the professor is not being threatened with assassination by the same group which caused the murder of Dr. Walter Rathenau according to a letter from Prof. Einstein cancelling an engagement to address a meeting here.

Considerable comment was caused in Geneva this week by the absence of Prof. Einstein from the meeting of the members of the intellectual committee of the League of Nations to begin the work of organization.

Walter Daugherty, who hails from Indiana, told the writer of a political incident in the Hoosier State that may be apropos of this discussion.

"Who're you going to vote for for county supervisor?" one Hoosier asked another.

"For Jim Smith," was the reply.

Foot Relief Week Aug. 7 to 12

Weak ankles that turn easily and heels that wear unevenly are evidence of foot trouble. Painful callouses and fallen arches are sure to follow.

If you have foot trouble of any kind you are invited to come to our Foot Relief Department.

Friday or Saturday

Our foot relief expert who is trained in the

Wizard Foot Relief System of Foot Correction

will give special attention to feet on these days. He will examine your stockinged feet free of charge. His recommendations will provide the way to relief.

See this expert who knows feet

do you walk like this?

Today's Success Depends Upon Last Night's Rest

EVERY SEALY GUARANTEED. Do You Sleep Well? The man with PEP is well armed to fight life's daily battle. If your rest is broken perhaps the bed you sleep on is uncomfortable.

Special Terms on Sealy Mattresses

We are desirous of placing Sealy Mattresses in every home in Wichita Falls and with this in view are making these easy terms: 10% Down—10% Each Week.

Thus Sealy's are within the reach of all, without inconvenience to the purchaser. You can now own a Sealy and hardly miss the cost. Once your beds are equipped with Sealy's your mattress troubles are over practically for all time to come.

WHAT SEALY MEANS TO YOU—

The Sealy label on a mattress is a guarantee that the manufacturers have made the mattress as good as a mattress can be made. Every Sealy label is a message of truth. No Sealy label has ever misrepresented the quality of the mattress to which it is attached. The label does not make the mattress a better mattress, but it is a pact in which you can safely place your confidence.

You can see, feel and examine the mattress only from the outside. The service value is mostly inside. The percent of filling-material used in each Sealy is printed in bold-face type on the label. We inaugurated the practice years before the first sanitary mattress laws were enacted. That is why those who know Sealy Mattresses buy them in preference to any other. You will find the price bears out our policy to achieve economy for purchasers by supplying them with goods of lasting quality.

DEMOCRATS READY TO SUBMIT TARIFF ISSUE TO PEOPLE

DECIDE TO REST DEBATE ON CHARGE OF G. O. P. INTEREST IN WOOL

SUPPORTERS OF BILL REPORTED IN QUANDARY

Republicans See No Advantage in Deferring Passage, Says Sullivan

By MARK SULLIVAN National Political Correspondent of the New York Evening Post and Wichita Daily Times. Copyright, 1922, by the New York Evening Post.

WASHINGTON, Aug. 5.—The sudden and to the republicans, disconcerting decision of the democrats to try to and the senate tariff debate early, represents a decision arrived at by the democratic leadership in the wool schedule debate. The democrats are of the opinion that they have now made a very good case against the tariff bill and that it is the best price they can get for it.

The republicans don't like this. They think it is not very "sporty" as the part of the democratic leadership. In the past months to terminate debates like this have always taken the form of private conversations and understandings between democratic and republican leaders. This time however, the democrats decided to get the advantage before the public by a debate on the tariff in the shape of a formal speech in the senate. The republicans will now go ahead and wind up the debate. Very few of them have any objection to the tariff or for the situation in which they find themselves. But the consensus among them is that there is nothing much to be gained by further delay. Here in Washington in a newspaper in which we are accustomed to frequently recognize important statements from the republican point of view there have been very direct intimations that the republicans will hold it up later on in conference between the two houses, so as to defer the passing of it until after the election.

From the point of view of the republican interest in the November elections it does not matter much whether the tariff is passed in September or in November. The public reaction to it at the time of the election will be much the same as the public feeling at the time of the passage of the tariff. The republicans are in actual operation for six weeks would not make much difference.

There are republicans who have a strong distaste for the tariff. Probably there are not fifteen or twenty republicans in the senate who are in favor of the tariff bill, any such feeling as republican leaders used to have for tariffs of their own making for example, has in a solitary way for the present tariff bill. Also, it is a fact that in very important respects the tariff in Washington there is real concern over the response that has come in from the country about the tariff. A few republicans in the senate are of the opinion that it would be better to scrap the whole tariff and begin all over again some time in the future.

There are plenty of republicans who are in favor of the tariff. They are of the opinion that it would be better to scrap the whole tariff and begin all over again some time in the future. They are of the opinion that it would be better to scrap the whole tariff and begin all over again some time in the future. They are of the opinion that it would be better to scrap the whole tariff and begin all over again some time in the future.

SUMMER SPORTS FOR THE SEDENTARY

that this feature of flexibility will enable their debaters to avoid the charge that the bill is too high. They can always reply that no rate is a fixed one, and that the actual rates in operation may be modified by the president.

From the democratic point of view the present gesture for an early termination of the debate is the best sort of politics. They have made a good case against the bill, have stored up in the Congressional Record all the campaign ammunition they want, and now they quit. Also, from the democratic point of view they don't particularly care to get the maximum advantage out of public dissatisfaction in the bill in the coming election. They don't care very strongly whether they carry the house or not next November.

What they do care about and what they are afraid to do is to get the maximum value out of their opposition to the bill and out of public dissatisfaction with it in operation. They have an opportunity to carry not only the house but also the senate, and the presidency.

WASHINGTON, Aug. 5.—The three per cent limitation immigration law has proved an effective bar against an overwhelming movement of immigrants from southern and eastern European countries to the United States. Secretary of Labor Davis announced today, in making public a survey of immigration figures for the first year just closed. The figures made public show that northern and western European countries had fallen far short of filling the quotas while the southern and eastern countries of Europe were sending in as many to America and would be accepted.

WASHINGTON, Aug. 5.—The eighth anniversary of the appearance of the first German cavalry patrol on Belgian soil, marking the beginning of the invasion, was commemorated yesterday throughout the country by the ringing of church bells and the firing of cannon.

COTTON BELT LINE TAKES OFF TWELVE PASSENGER TRAINS

DALLAS, TEXAS, Aug. 5.—Twelve passenger trains on the St. Louis and Southwestern railroad will be discontinued effective Sunday, T. H. Lawrence, general passenger agent of the road, announced late today. Shortage of fuel and mechanical labor was the reason for the discontinuance, Mr. Lawrence declared.

Two men and a large number of documents said to have been stolen were seized at the ultra-fashionable Raquet club. The two men held are said to be from New York and two others were said to be former revenue agents, who turned state's evidence, according to bureau officials.

WHOLESALE THEFT LEGAL DOCUMENTS INTERNAL REVENUE

WASHINGTON, Aug. 5.—Allged wholesale theft of legal documents from the bureau of internal revenue, said to contain evidence against some of the largest liquor interests of the country, was revealed here tonight when prohibition agents arrested four men.

WASHINGTON, Aug. 5.—A unified campaign to smash organized labor is now under way among the business interests of the country. Samuel Gompers, president of the American Federation of Labor charged in a statement issued tonight.

BOTH SIDES CLAIM VICTORY IN STRIKE

ST. LOUIS, Aug. 5.—Following a conference of anti-Read Democrats this afternoon, it was said that no action would be taken to pursue the reported movement to put an "independent movement" in the field in an effort to defeat United States Senator James A. Reed for re-election at the November election.

CHARGES UNIFIED EFFORT TO SMASH ORGANIZED LABOR

WASHINGTON, Aug. 5.—A unified campaign to smash organized labor is now under way among the business interests of the country. Samuel Gompers, president of the American Federation of Labor charged in a statement issued tonight.

WASHINGTON, Aug. 5.—Negotiations to end the American Textile strikers' walkout resumed today by President Harding, B. M. Jewell, president of the railroad employer's department of the American Federation of Labor, W. H. Johnston, president of the machinists and J. P. Noonan, head of the electrical workers' brotherhood. The white house after an hour of conference with the chief executive, expecting to be recalled on Monday.

HOPE FOR FINAL VOTE ON TARIFF BY SEPTEMBER 1

WASHINGTON, Aug. 5.—A final vote on the tariff before September 1, is hoped for by republican and democratic leaders under the operation of an unanimous consent agreement entered into today by the senate. While the agreement fixes no date for a vote, it provides for sharp curtailment of debate and disposition before next Saturday of all amendments to the more important sections of the bill still in controversy.

ABANDON PROPOSED INDEPENDENT MOVE TO DEFEAT REED

ST. LOUIS, Aug. 5.—Following a conference of anti-Read Democrats this afternoon, it was said that no action would be taken to pursue the reported movement to put an "independent movement" in the field in an effort to defeat United States Senator James A. Reed for re-election at the November election.

WASHINGTON, Aug. 5.—Negotiations to end the American Textile strikers' walkout resumed today by President Harding, B. M. Jewell, president of the railroad employer's department of the American Federation of Labor, W. H. Johnston, president of the machinists and J. P. Noonan, head of the electrical workers' brotherhood. The white house after an hour of conference with the chief executive, expecting to be recalled on Monday.

RETURNERS INDICATE INCUMBENTS HAVE BEEN NOMINATED

LOUISVILLE, KY., Aug. 5.—Early and scattering returns from the seventh and ninth and tenth congressional districts indicated that the incumbents in those districts had been nominated by their respective parties in today's congressional primaries.

FLOWER OF MARINE CORPS SAIL FOR RIO DE JANEIRO TO ATTEND EXPOSITION

PHILADELPHIA, Aug. 5.—The flower of the United States Marine Corps, gathered from various posts and stations, boarded the U. S. S. Antares today to sail for Rio de Janeiro, where they will represent the United States at the Brazilian centennial exposition.

WASHINGTON, Aug. 5.—A final vote on the tariff before September 1, is hoped for by republican and democratic leaders under the operation of an unanimous consent agreement entered into today by the senate.

DOUBLE-SKULLING

Twelve Members of 1921 High School Grid Team Will Report to Jones

When Coach Jones of the Wichita Falls high school football team issued his first call next month for candidates for the 1922 eleven, twelve men from last year's squad are expected to report. They are capt. "Henky" Walker, German Kenley, Pearl Brasher, Bennett Moore, Hubert Hirsinger, "Shorty" Cheving, Frank Shaw, "Dutch" Anderson, Gerald Coffey, Clifford Faggoner, Joe Bailey Bell and William Walker.

The new Red and Black team will find a well drilled group of athletes when he sends them through their preliminary stunts as it was conceded by all that Harry Yiner turned out the best team last fall that ever represented the local institution. The school's closing victory over Fort Worth high at Athletic park in November was a major league success and local grid enthusiasts and with practically every member of that victorious squad back, Coach Jones will have a strong nucleus around which to build up a winning aggregation.

In addition to the twelve men mentioned, True Cramble has signified his intention of joining the high school team. Cramble gave promise of being one of the best backs in intercollegiate circles last season when he left the Cardinals for reasons best known to himself. Capt. Walker also states that a new backfield man from Gilchrist will enter the team this year.

The team itself is not worrying Coach Jones as much as location for practicing the contest. It is in position to bring some of the best scholastic eleven in the state to Wichita Falls this season, providing a suitable location is obtained. He had figured on using Athletic park, but the latest report from the baseball association is that the entire outfield is to be used as the present season is over and unless he undergoes a change of venue, the youngsters are apt to be out of luck. It has been suggested that a fence, large enough to enclose a gridiron, be built at the site of the stadium.

The Cardinals are still having their troubles and are still having them with accidents and reverses. In the American league it looks like the Cardinals are in a position to win with the New York Yanks the favorites if Miller Huggins can ever succeed in getting his star pitcher, Walter Johnson, back into any kind of form.

The St. Louis Browns have a well rounded team and they are being severely handicapped by having Urban Shocker, his star pitcher, out of the game for several weeks, and injured, but the production results from a number of youngsters and braced the gap.

The Yanks are all bottled up with internal trouble and in prospect of collecting about \$2,000 each from the world series can't influence his stars to quit fighting and play together. The Browns are a sure winner.

GOOD SCORES MADE AT WEEKLY SHOOT Eight Nimrod Finish the Singles Event With Perfect Scores.

The extreme heat kept the attendance low at last week's regular golf tournament, but the scores were less than four squads present some exceptionally fine shooting was turned in. No less than eight of the 66, while two dropped only one bird.

By breaking 60 straight, Ward, a professional, brought his own string of totals to 125, while Charlie Greenberg has an unbroken run of 73. The following scores were made:

Ward 50, Greenberg 50, Casper 50, Dempsy 50, Berges 50, Kiddy 50, Markle 50, Pate 45, Adams 45, Rhodes 48, Adams 47, L. L. Lyon 47, Apple 47, Wilkins 46, Brandenburg 45, Davenport 35.

AMERICAN GOLFERS TO PLAY BRITISH TEAM THIS MONTH

PITTSBURGH, Aug. 5.—W. C. Fownes Jr., captain of the committee on selection, announced here today the personnel of the American team which will play a British team in the national golf links course at Southampton, Long Island, on August 28 and 29. The committee, composed of R. A. Gardner, Chicago; W. A. Handish Jr., Detroit; Francis Guilmette, Boston; and Mr. Fownes, named the following noted golfers to uphold the American colors:

FASTEST RACE OF YEAR ON GRAND CIRCUIT FORT MIAMI PARK, TOLEDO, Ohio, Aug. 5.—Following Nadda's wonderful race against the field, the grand circuit meeting here brought the fastest race of the year to date.

WILL DOLLARS OR SENSE WIN THE PENNANT, ASKS BILLY EVANS

Rickey (left) hasn't the money that is available to McGraw (right), but you've got to admit, that he has "the Cards."

By BILLY EVANS The National league race appears to have simmered to a two-club affair, the New York Giants and the St. Louis Cardinals. These two clubs outclass the field. One or the other is almost certain to represent the National League in the world series.

It cost Manager McGraw of the Cardinals a fortune to build up the team he has today. He has spent more money on the Cardinals than any other manager in the league. McGraw has a great deal of money, but he has not the same kind of money as McGraw has.

Practically every other player on the club was taken from the minors and developed by Rickey. In exchange for these players Rickey has lost some of the best players in the league. Rickey has a great deal of money, but he has not the same kind of money as McGraw has.

On the St. Louis Cardinals are four former American league players, catcher Al Smith, shortstop Lavan, first baseman Fournier and utility man Fournier played with the White Sox and the New York Yankees.

Landis to Suggest Change in Date For Inter-Club Deals

By Associated Press. ST. LOUIS, Aug. 5.—F. W. Vesper, president of the St. Louis chamber of commerce, today received a letter from Baseball Commissioner K. M. Landis in which the supreme arbiter of baseball said he would suggest at the next joint meeting of the American and National leagues that the date for the inter-club exchanging of players shall be July 1 instead of August 1 as now in effect.

Letters from fans in various parts of the country approving the proposed change in the date of the inter-club exchanging of players have also been received.

Wants Judges to Report for Work By Nine o'Clock

NEW ORLEANS, Aug. 5.—After Nashville had tied a two-run lead in the first half of the eighth, New Orleans put over the winning run in the last half and defeated Nashville 4 to 3.

THALHEIMER AND WHITE WIN DOUBLES FINALS

DALLAS, Aug. 5.—Louis Thalhimer of Dallas and Louis White of Austin defeated Bradley George and George Wright, both of Dallas, in the doubles final today in the Southwest tennis tournament being played on the courts of the Dallas Lawn Tennis club.

REPORT ON CONDITION OF CLEARING HOUSE BANKS

HESTER REPORTS TOTAL COTTON AT 11,653,133 BALES

COMMERCIAL CROP OF TEXAS IS 942,000 UNDER LAST YEAR.

SAYS TEXAS HAS LITTLE OF NONDESCRIPT COTTON

Placed Consumption of American Cotton Near Thirteen Million Bales.

NEW ORLEANS, Aug. 5.—Details of Secretary Hester's annual report on the commercial cotton crop of 1921-1922 were announced here today. He puts the total of the commercial crop of 1921-1922 at 11,653,133 bales, an increase of 226,317 over the crop of 1920-21 and a decrease under 1919-20 of 794,047 bales.

Mr. Hester has made an extensive investigation into the character of the carry-over, his inquiries being of date about July 15. He says Texas has little non-descript cotton and that there were practically no "colliers" in this year's crop.

Mr. Hester has made an extensive investigation into the character of the carry-over, his inquiries being of date about July 15. He says Texas has little non-descript cotton and that there were practically no "colliers" in this year's crop.

\$15,000,000 BEQUEST MAKES HER THE RICHEST GIRL IN TEXAS

Anne Burnett, granddaughter of Texas' richest man, and Tom Burnett.

It is all hers because her grandfather, Captain S. B. Burnett, regarded as the wealthiest man in Texas, died recently and left her the bulk of his estate. His only surviving son, Tom L. Burnett, was given \$25,000.

These are some of the things Miss Burnett owns: Three great stock ranches whose area is more than half as large as all Rhode Island.

FEEDING BASEBALL SCORES TO HUNGRY FANS IS NO JOB FOR A PEEVISH GUY ON A HOT DAY

The thermometer stood 111, just like a cigarette. The C. E. sat before his desk leaning lazily in his chair against the wall with his feet swung across the top of the sliding board in the desk.

"Hello," "Times office," "Is this the Times office?" "Yes, sir—Yes, mam, pardon me."

"What's the score?" "What game, Wichita?" "No, the Spudder." "Two to one in the second, Wichita."

"What's the score?" "Four to three in the sixth, Wichita." "No, I don't mean the Spudder, I mean the Yankees."

"What's the score?" "Four to three in the sixth, Wichita." "No, I don't mean the Spudder, I mean the Yankees."

MASS MEETING AT THE LABOR TEMPLE WEDNESDAY NIGHT

PROTEST ALLEGED KLAN MEMBERSHIP UNIVERSITY MAN

GOAL RESERVE IS ABOUT EXHAUSTED; PRODUCTION HALVED

NATIONWIDE SHUTDOWN OF NON-ESSENTIAL INDUSTRIES THREATENED.

GOVERNMENT OFFICIALS KEEPING CLOSE WATCH

Few Mines Have Reopened As Result of Troop Protection.

By PAUL R. MALLON, United Press Staff Correspondent. WASHINGTON, Aug. 5.—A nation-wide shut down of non-essential industries will be demanded by the government officials keeping a close watch on the rapidly growing fuel shortage and coal production.

Production increased 300,000 tons during the last week according to figures made public tonight by the United States geological survey. But this is a comparatively small amount, especially when it is compared with the production of the middle Appalachian coal field.

HOUSTON HAS THE HEAVIEST MURDER DOCKET IN YEARS

HOUSTON, TEXAS, Aug. 5.—The heaviest murder docket in Harris county in years tonight awaited court action, especially some time in the afternoon for trial of the cases will be set.

Y. B. Mathis, 32, charged with assaulting his three grand children with rumes from a kitchen stove. Among them are: Mrs. Dan W. Ryan, accused of killing her husband, Dan W. Ryan, while she was in the company of him with another woman in his automobile on a lonely road recently.

Leon Briggs, charged with killing his wife, Mrs. W. F. Briggs, during a raid on Briggs' home. Mrs. Laura Simms, charged with killing her husband, W. R. Simms, in a rooming house. Carl Beaver, her brother, accused jointly of the crime was convicted. The majority of the others are negroes.

MASS MEETING AT THE LABOR TEMPLE WEDNESDAY NIGHT

A mass meeting of organized labor will be held in the auditorium of the Labor Temple Wednesday night beginning at 8:30, under the auspices of the trades and labor union. The meeting will be held in the auditorium of the Labor Temple.

JACK DAW'S ADVENTURES—Continued. BY ELTON

THE DUKY CHIEF SEARCHER SALUTED THE DUKE AND TOLD HIM HE HAD SEARCHED JACK, AND HIS CLOTHES, BUT COULD NOT FIND THE AIR JACK HAD OUTWITTED THE DUKE.

CALLING ALL HIS CHIEF HELPERS BEFORE HIM, THE FUEZLED DUKE TRIED TO FIGURE OUT A PLAN TO GET THE AIR, NO ONE COULD THINK OF WHERE JACK HAD HIDDEN IT.

THE DUKE OF DARKNESS WAS VERY CROSS BECAUSE JACK HAD GOT THE BEST OF HIM, SO HE HAD TWO OF HIS GOBILIAS TAKE JACK OUT TO ONE OF THE LOCKED CAVES.

DOOR JACK WAS NOW LOCKED UP SECURELY IN THE ROCK-WALLED CAVE, BUT HE DID NOT LOSE COURAGE. INSTEAD HE PLANNED ON HOW TO MAKE AN ESCAPE.

MRS. ISABEL JAMES DIES AT ABILENE ON FRIDAY

ABILENE, TEXAS, Aug. 5.—Mrs. Isabel James, 73, resident of this section since 1884, and wife of the late Gen. Fleming W. James, died at her home here Friday morning, following an illness of several months. Funeral services were held from the residence Saturday morning, all banks in the city remaining closed for the services.

Rev. A. A. Porter, a Presbyterian minister, and was born in Charleston, S. C., May 6, 1849. She came to Texas in 1884, with her husband, settling at Baird, 30 miles from here, where they remained for several years. General James served throughout the civil war, and since coming to this section had been engaged in banking business up to his death in 1918. Henry James, a son and president of the First State bank of this city, died recently.

SENIORITY NOT A VITAL ISSUE.

The Times believes with its correspondent, Mark Sullivan, that the question of the restoration of seniority to the striking shopmen is not an obstacle that ought to prevent the settlement of the strike.

It appears that the railroads feel that they have beaten the strikers and that their position will be strengthened by having the shopmen come back to work without any seniority rights.

It is true that the shopmen are trying to make themselves believe that in accepting President Harding's proposals they have not lost anything...

But the abandonment by the union leaders of their original contention is a tacit admission that they have lost the strike...

There is such a thing as making the way of repentance too hard. Might it not be a good plan for the railroads to let the strikers down as easily as possible...

TODAY'S TALK

THE STARRY SKY.
Billions of people have looked into the face of the heavens and wondered and wondered. Men have spent years and years seeking to fathom the secrets behind the stars.

And yet these wondrous stars keep slipping on, saying nothing and understanding all!

The earth is closed in mystery. No man is able to tell when the first pansy poked its gypsy face into the sunlight.

We must teach ourselves the lessons of the stars. We see the same stars as our fathers saw.

Our children's children will look into the faces and deep into the hearts of these same stars with all the wonder and mystification that we have looked.

The stars offer nothing of themselves, make no excuses, do no complaining. They just shine and shine and shine. And probably will continue to shine for another billion years or so.

But we folks of the earth below, with only an hour or so to stay, proportionately speaking, fume around and fuss our little lives into unhappy moods over details that the stars can't even see.

No wonder the ancient poet-ingenier exclaimed as he looked into the heavens: "What is man that Thou art mindful of him!"

Often before I retire for the night, I put my head out of the window and look up into the sky to see if the stars are shining that night. Of course they are always shining—though often they are clouded away. But just the minute I see the starry sky, I say to myself that it is a good night in which to sleep in peace.

All of us pay too little attention to the big things. It never discourages me to look to the top of the great Woolworth tower in New York City. I say to myself that here was a man who did a bigger job than I have ever done—and with no greater advantages.

The tower of this gigantic building, by the way, comes nearer to the stars than any business structure ever erected in the history of the world.

The starry sky says nothing—but tells me—and understands all. A good statement of fact to remember, and to emulate so far as we are able.

BE GREAT THIS MINUTE.
This is what the world is seeking: Honest effort, honest speaking. This will earn its brightest shining. Labor that is patient, willing. Not the brilliant deed and clever. But the steady, sure endeavor. Unto God and duty loyal. That is what the world calls royal.

Here's the road to high promotion: Unto duty true to devotion. Small the task, but gladly do it. Though it irks, be faithful to it; Never try from fame to borrow. Never wait for some tomorrow Or a feat with greatness in it. Do your best. Be great this minute.

SMILE A WHILE
Health hint: In borrowing trouble be sure you can pay it back. Now they want laws to protect airplane traffic. Maybe they could repeal the law of gravity.

THE STARRY SKIES IN AUGUST

For the last few months we have had a very unusual display of the naked-eye planets. The five naked-eye planets have been visible in the early evening, with Mars and Mercury exceptionally favorable for observation.

Venus is the brightest of all planets and much brighter than any fixed star. It can be recognized by reason of its brightness. The other planets may be seen anywhere along the ecliptic.

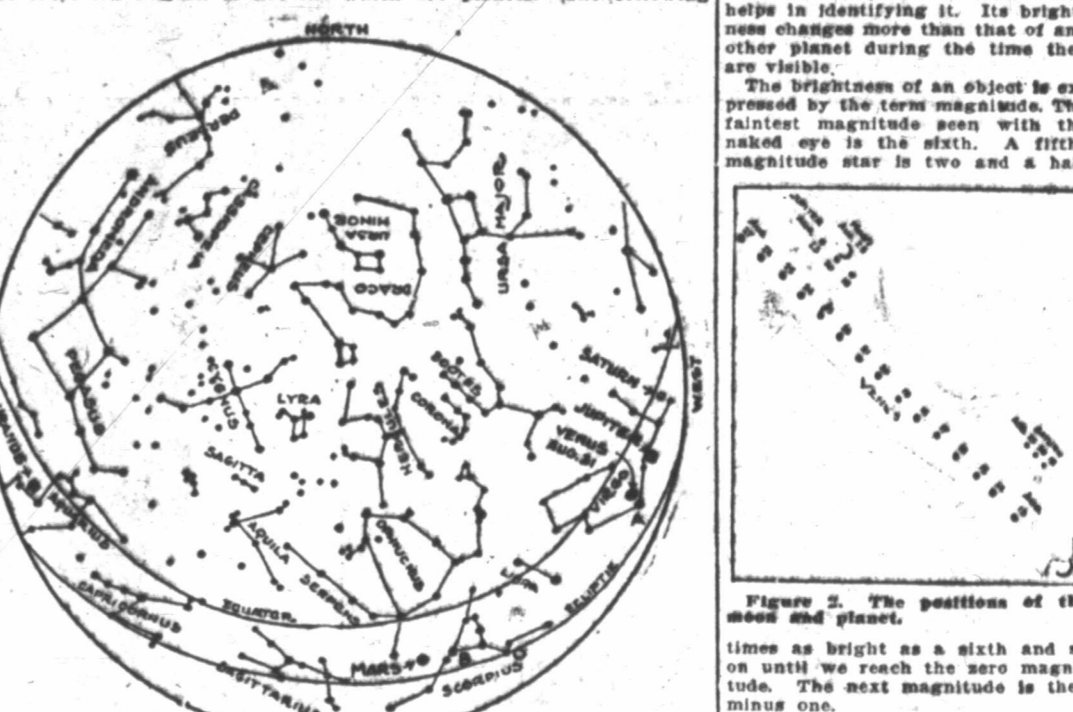

Figure 2. The positions of the naked-eye planets as seen from the earth at the beginning of August, 1934.

BACK-TRAILING ON THE OLD FRONTIERS

Drawing by CHARLES M. RUSSELL

Civilization's Westward Advance Left the Trails White With the Bones of the Buffalo, Which Were Slaughtered by the Millions For Their Hides

Interwoven closely with the history of the "far west" is the story of the buffalo of the American plains, which ranged in countless millions a century ago and became practically extinct within a few decades after the killing of the animals for their hides became a commercial industry. It is believed that no other great animal family was ever wiped out so rapidly.

The American bison was found by the first colonists of the Carolina and other of the southern and middle states, from which parts of the continent they were first frightened away or exterminated. In the latter part of the 18th century they were seen in a wild state in Kentucky. Early in the 19th century most of these animals in the region east of the Mississippi were exterminated or had found their way to the prairies west of the great river. The earliest account of the bison given by white men is that of Coronado, who saw great herds of them on his march northward from Mexico in 1540, between the Missouri river and the Rocky Mountains. One of the earliest buffalo hunts on a big scale was that described by M. Nicolle in the late 18th century at a place near Fort Pierre, in South Dakota. Horace Greely, in his journey across the continent by stage in 1855, encountered herds estimated to number millions in western Kansas.

The number of buffalo in the west in the early 50's was estimated roughly at from fifteen to twenty millions. They ranged from Mexico north to the Arctic circle as far as the Great Slave Lake, but their natural home was between the Missouri river and the Rocky Mountains, and not farther south than the Rio Grande. Outside the limits of their range existed the few small herds that were scattered in Kentucky, Tennessee, and Virginia. Daniel Boone once found a herd in Kentucky that numbered 1,000, but that was a large one for that time. A goodly portion of the meat consumed by early settlers in the middle west and north was cut from the bison, which was a sturdy animal which so long existed as monarch of the plains. Thousands of people who crossed the plains in the trains drew their supply of meat from the same source. Buffalo trails were followed westward because it was known that "buffalo chips" even furnished fuel to the plainsmen. The hides furnished many white men with garments and necessities, as well as bedding.

Buffalo Cause of Pacific Railroad. The building of the first railroad to the Pacific was made possible at least in part because of the buffalo. From the mighty herds the army of railroad builders drew their daily supplies of fresh meat, and thousands of the animals were slaughtered for food annually while the work of laying rails was pushed forward. For a few years in the '50's the railroads did an enormous business carrying train loads of buffalo hides and bones, which for a period formed the principal commercial product of the plains. Many settlers, beset by crop failures, gathered bones and sold them to make a living.

The buffalo in color is brown, but the shade varies as the seasons advance. It is in every respect a peculiar animal, unlike any other. A characteristic of the buffalo is that it never trots, either walks or gallops, and it usually travels against the wind. Its sense of smell is so keen that it can smell a fox two miles away in the wind.

The best meat obtainable in the early-day frontier towns was buffalo. The markets of such places as Atchison, Topeka, Leavenworth and other Kansas towns, as early as 1857 and for some years following were often supplied with buffalo meat. The bison upon the mountains was an especially choice morsel, as was also the tongue. Rich, juicy steaks and roasts of the buffalo were unexcelled by any other meat. Heads of tongues were dried and shipped east to the Boston and New York markets, where they were in great demand and brought fancy prices.

The American bison differs materially from the buffalo of the old world. At first view his red, fiery eyes, shaggy mane and long beard, the long, lustrous hair on his shoulders and fore quarters and the comparative nakedness of his hind quarters suggest a strong likeness to the lion. The buffalo carries his head low and is enormously powerful in neck and shoulders. The most promising distinguishing trait of the American bison from the European buffalo is the fact that the cow refuses to breed with the European buffalo, although in the aversion between these creatures that they always keep separate, even if bred in the same pasture and raised together. The American bison, however, breeds freely with the domestic cattle and in this manner propagates a new species that continues its kind.

EARLY DAY WHITE BUFFALO HUNTERS.

Copyrighted 1922 by the Cheery-Rahm Syndicate.

ter of 1871-72. After a grand chase on the western plains in Wyoming under the guidance of Buffalo Bill and General Sheridan and Custer, they realized that the buffalo as a wild species was doomed.

Last Buffalo Killed in 1882. The most conspicuous person engaged in "killing bison" was Colonel William F. Cody, whose soubriquet, "Buffalo Bill," has been a household word for more than half a century. In 1867 when the Kansas Pacific was being built across the plains to Denver, Cody, then a young man, was employed at \$500 a month to keep the army of workmen supplied with meat. He was engaged in this work for 18 months during which time he killed on an average of eight buffalo a day. After 1868 few buffalo were seen from the stage lines near enough to permit of the passengers shooting them, although thousands could often be seen in plain sight out of range. The buffalo became shy and kept away from the traveled road. The last buffalo killed east of the Mississippi river was shot in 1882.

The trading posts, and especially those along the Platte river, made enormous profits bartering for buffalo hides. There were more than a dozen of these within a distance of 200 miles between Fort Kearney and Julesburg, and about half as many between Julesburg and Denver. As early as 1863 the trade in buffalo robes with the Indians was enormous, hundreds of thousands of the animals being killed annually along the Platte, and the hides became a staple article of commerce. Every plainsman had one or more robes and thousands were made into overcoats. Every freighter and mule or ox skinner also had buffalo overcoats, made with the hair inside.

During the immense overland travel in the early 60's portions of the plains were fairly white with the bones of buffalo. No one then seeing the apparently endless mass of bones in Kansas and Colorado, as well as farther north, ever thought that any use could be made of them but after the completion of the Union Pacific railroad and its

branches across the plains, a new industry was inaugurated in the collection and shipping of bones. The trade carried on in that line is astonishing to contemplate. In ten years' time sales of bones aggregated \$2,000,000, at an average price of \$5 per ton. In 1874 alone there were shipped east over the Kansas Pacific and Santa Fe roads 19,000,000 pounds of bones, more than 1,250,000 buffalo hides and 400,000 pounds of meat. The bones were ground up into fertilizer and the horns were polished and sold largely for dwelling and office ornaments.

Importance of Buffalo to Indians. The passing of the buffalo spelled disaster to the plains Indians, for this animal furnished everything, practically, that the Indian needed to live. The hide was dressed in a variety of ways, each special treatment having its particular use. The lodge of the Indian, his bed and covering when sleeping, his clothes, his weapons of war, his shields in battle, kettles for his food, boats on the rivers, leather for his saddle and harness, strings for his whip—all bow, arrow and dress ornaments—all these and many other articles were made from the buffalo robe. His food also, from the short, curved, strong horns, to the horns were manufactured into an endless variety of articles that entered into every part of the domestic life of the Indian.

The methods of capture of the buffalo by the Indians and whites were various. With the Indians, wholesale destruction was commonly resorted to by driving a big herd at full gallop to the brink of a precipice or into the mouth of an artificial enclosure. The force of the mass behind crowded those in advance ahead until they fell on either side of the foot of the cliff or in the enclosure, and thus they were slaughtered by hundreds. A great deal of skill, as well as favoring conditions of the established religious rites of the tribes. The true sportsman-like attack was by direct onslaught on horseback, known as "the surround." It was managed with the same circumspection, directly upon the herd until the latter had fully scented the danger, when the hunters broke into a wild gallop, each free to go where he chose, chasing and slaying amid the thunder of hoofs, the

lowing of the hoofs and the clouds of dust raised in the mad rush of so many animals. So completely panic-stricken would these mighty herds become, and so little sensible of where to flee, that most of them fell victims to their pursuers and the ground would soon be strewn with dead bodies. Then for days the women would be busy gathering the meat, hides and other fruits of the few hours' hunt.

One of the picturesque types of the early days on the plains was the white buffalo-hunter. At first these men used to hunt buffalo on horseback, much after the manner of the Indians, using, however, long-barreled, muzzle-loading guns and carrying in their hands the ramrods used to press home the powder and ball after each shot had been fired. Later, when the extermination of the species was proceeding in full swing, "still-hunting" was practiced. This was a simple, effective method of slaughter. The hunter would crawl from the leeward to within six rifle shots without being discovered. Then, choosing the best concealment the ground afforded, he would begin the work of destruction by firing at the nearest animal.

The buffalo, seeing nothing and hearing only the report, would usually remain quiet in wonderment. Presently the wounded animal would fall and the others, smelling its blood, would gather round and

try to make it rise or else go on grazing evidently thinking that their companion had lain down to rest. Meanwhile the hunter's rifle would be busy. Shot after shot would bring down victims after victims until the whole band had been killed. The buffalo was a hard animal to kill. A ball upon its shaggy head or neck was deflected as though from a panoply of steel. Wounds in the rear of the body were seldom fatal. It was only in the region of the heart that a bullet was sure and always aimed to strike there.

In the spring of the year, when the ice was going out, great numbers of the animals were drowned in the Missouri river while trying to cross. In some years their bodies floated down the stream in such numbers as to render the air almost unendurable to boat crews and passengers on their way up the river. Indians liked this kind of buffalo meat better than any other and would tow carcasses ashore to be

eat up. There are today less than 2,000 buffalo in captivity in the United States, the largest herd being in the National Bison reserve in the Southwestern part of the Flathead Indian reserve in Montana, where a small herd has grown to several hundred, and another herd is growing at a normal rate in Yellowstone Park. The herd in the National Bison

reserve have found a home in a country of romance and much historical interest. Here the Flathead Indians have dwelt since encroaching civilization beat them back from their once free hunting grounds. Every gulch and ridge bears a name preserving a fragment of tradition in a tongue that ever reaches the world in lessening whispers. The Indian, especially the old man, feels a warm and loving interest in the buffalo, for the fate of his race and of the bison are akin. Both now exist at the mercy of their old-time foe, the white man. Had it not been for the comparatively recent activity in establishing the two herds amid suitable surroundings for propagation, the buffalo would in a very few years have departed from the face of the earth with the fast-vanishing Indian and would live only in the history and tradition of the western frontiers that have also gone forever.

PLAN CANADIAN RIVER IRRIGATION ASSOCIATION. AMARILLO, Aug. 5.—Plans for the formation of a Canadian river irrigation association are going forward here, directed by A. S. Bennett, former president of the Panhandle Plains chamber of commerce. Plans have been drawn up for a proposed dam which would make possible irrigation of from 300,000 to 1,000,000 acres of land. It is said.

MANY APPLICANTS FOR PLACE AS POSTMASTER. CLARKVILLE, Aug. 5.—Applicants for the position of postmaster of Clarkville are numerous. More than 25 persons have made application for the position and will take civil service examinations in a short time.

TOWNS DISCUSS PLANS FOR FIGHTING FIRES. DENTON, Aug. 5.—Officials of Colina, Gunter, Ashbey, Sango, Tioga and other towns in this section met at Pilot Point recently and considered methods of cooperating in fighting fires that get beyond control of the local fire departments.

STATE SECRETARY OF THE TEXAS COTTON ASSOCIATION. NEW BOSTON, TEXAS, Aug. 5.—J. W. L. Hall of New Boston was elected state secretary of the Texas Farm Bureau Cotton association at a meeting of that body held in Dallas recently. A membership campaign will be undertaken immediately under Secretary Hall's direction. Plans for the campaign were made at the Dallas meeting.

"Who can beat it?"

The Hotter It Is, the Cleaner Your Refrigerator Should Be

When we deliver to the housewife pure ice and keep her refrigerator going, when we see that our drivers give her correct weight and are careful in their work, our business obligations are discharged, but not our interest in her family's health. We feel that we owe it to our customers to show them how to get the most benefit from using ice, how to save waste, how to keep the refrigerator clean and cold.

The inside should be washed at least once a week with cold water and soda; then rinsed in clean water and thoroughly dried.

A single drop of milk will develop countless bacteria, start infection if the temperature permits. Keep the ice chamber full. Bacteria cannot breed in cold air and of course food keeps better.

AUTOMOBILE NEWS

THIS MAN'S IDEA BRINGS HIM GOOD WILL AND BUSINESS

AN AUTOMOBILE THAT ACTS LIKE LITTLE PET DOG

"Mystery demonstrations" have become the vogue as competition in the automotive field grows keener. Reports recently tell of cars that talk, that see, that obey the commands of persons not in them as though they were under a magic spell.

Ed Reed, a driver of one of the new "amous Mitchell" "White Streaks" which are operating throughout the United States, is the inventor of one of the latest stunts which is entertaining and puzzling the motoring public of Boston.

Reed drives his car into a crowded section of the city, throttles it down to a very slow speed in high gear, and then jumps out and tells him like a pet dog. While the populace is still gaping, he turns about, faces his car and commands it to stop, which it does with uncanny promptness. Reed then commands the car to follow him again and to the astonishment of everyone there is a whirl of the starting motor and the "White Streak" starts to crawl after him. The headlights blink on and off at a word. The klaxon sounds a warning automatically if anybody strays on the right of way. To all intents and appearances it is an automobile actuated by human intelligence.

Reed laughingly admits that his demonstration is tricky but he refuses to reveal his method of operation and so far no one has discovered his secret.

A demonstrating car in the same city operated by a competitive firm is almost as well trained. This car apparently can talk and see. If a modern "flapper" type of girl passes by, his car starts a shameless flirtation by calling out some such greeting as "Pretty, pretty."

With these two examples to start with the future holds promise of much that is novel and unusual.

Backpack hub caps with grease every six months.

Never use gasoline to remove stains from seat covers.

Batteries should receive careful attention to insure efficiency.

Acid allowed to spill on the battery surface will cause a short circuit.

Rubber garden hose makes an ideal protection for ignition cables.

Never pour water on a gasoline fire as the gasoline will float on the water and spread the flames.

Squeaking brakes may be temporarily stopped by spraying water between the brake surfaces.

Never change the adjustment of the carburetor to make your motor start easier. If you do the mixture will be too rich when the motor heats up.

A scraping sound in a rear wheel is sometimes caused by sand working in between the brake band and the drum.

A few drops of oil from time to time will relieve squeaking by spraying a small quantity of oil or graphite grease to each lug bolt, tightening each bolt to its capacity.

A bushing can be enlarged without the help of a reamer by cutting down the stick to fit the bushing, putting some grinding compound in and rolling the bushing back and forth on the bench, bearing down on the stick and keeping it from turning. The resulting hole will be practically as true as if done with a reamer.

wire, or door bell wire with insulation removed, over the splice, being sure to wind tight, and close together. Solder with flame or iron and sweat solder in between the wire and on end of wiring. This will make a strong splice and one that will last.

MOTORCYCLE NOTES

If your machine is chain-driven, be sure to carry a chain rivet punch in your kit. It is almost impossible to repair a broken chain without its aid, the new spare chain links being useless, of course, unless the rivets of the broken link are extracted.

It is a good idea to "uncouple" the belt and have it loose when your machine is in the garage for any length of time. For lengthen the life of the belt quite a lot that way.

After a decent mileage you will find that the end of the magnet carbon brush which stands all the friction has become shiny, and a shiny brush invariably means mis-firing. The remedy is to roughen it with a fine file, used very gingerly.

The amount of overheating or semi-overheating observed on the roads these hot days seems to indicate that some riders haven't yet discarded their thin winter oil for the thicker grade recommended for summer use.

When decarbonizing a two-stroke engine remember that it is just as important to clean the under side of the piston head as the rest of it; in fact, more carbon collects there than anywhere else. And don't forget the scrape the inside of the rings, too, as well as the piston ring grooves.

VIENNA DRINKS TO QUENCH ITS THIRST

VIENNA, Aug. 5.—This city consumed in the past year 112,922,800 liters of beer, 46,357,500 liters of wine and 2,424,200 of spirits, according to figures just published. Taking the population at nearly 2,000,000 this is a per capita consumption of 56 liters of beer, 23 of wine and 1.2 of spirits, a total of 81 liters, or a little over 21 quarts.

OAKLAND REDUCES PRICES EFFECTIVE FIRST OF AUGUST

PONTIAC, MICH., Aug. 5.—The Oakland Motor Car company today announced reductions ranging from \$240 to \$100 on its complete line of six models, effective August 1. The touring car has been reduced \$150 and now sells for \$2985 f. o. b. factory. The sedan and four-passenger coupe have been reduced \$145 and now sell for \$1845 and \$1445 respectively. There are correspondingly large reductions on all other Oakland models.

George H. Hannum, president and general manager of the Oakland Motor Car company states that the new prices are due to the large volume of sales of the newest models, which resulted in larger production and in larger savings gained through large production. The 15,000 mile written engine guarantee will be continued.

"We have every reason to believe that we can hold this larger production on which these new prices are based," declared Mr. Hannum, "both from the orders on hand and from the increasing numbers of orders, which have grown steadily and regularly. The increase in sales has been extending over such a long period that we feel confident that we can hold our new high production."

FIGHTING AND BIBLE ARE INSEPARABLE IN CHINA

NEW YORK, Aug. 5.—Wars and politics around Peking do not interfere with the sale of the scriptures. The American Bible society has announced that it recently shipped production on which these new

NEW TYPE DRY BATTERY MANUFACTURED IN CITY

A new type of dry storage battery for automobile use has been invented in Wichita Falls and is being manufactured in Wichita Falls.

Mr. F. M. Holmes, who has lived in Wichita Falls for several years, is the inventive genius of this new type battery which is to be known to the world as the Sunlite Battery. The name is well chosen as the light which the battery generates is as white and brilliant as natural sunlight.

Manufacture of this product is well under way at the company's plant at 510 Ohio Ave. Associated with Mr. Holmes are G. D. Rigby and W. L. Valentine.

Mr. Holmes states that the dry cell storage battery is bound to take the wet type for many reasons. He points out the following points of superiority: No terminal corrosion, will not freeze, no liquid, no separators, no deterioration when idle, no leaky jars, no buckled plates, no plate sulphation, no deterioration of outer box, cannot be overcharged, no service station attention, has higher voltage, greater amperage capacity, no fermentation.

This product is sold under a binding guarantee for two years' service.

Paul Harding, a friend of John Mondala, Grey Goose salesman, bought a six cylinder car of well known make but less expensive than the Willa. John had demonstrated the Grey Goose the day before the

WANTS GREY GOOSE AFTER STARTING ON TRIP TO COLORADO

purchase but the price seemed to stand in the way.

Mr. Harding started out cheerfully on his way to Colorado but stopped disgusted at Holiday and phoned Bill Lampe to send him a Willa at once. He figured he wanted comfort on a vacation trip.

The Willa Saint Claire was delivered to Mr. Harding at Holiday and he continued on his way rejoicing.

Bill Lampe says if you have thousands of miles ahead of you and easy riding and roadability is wanted come around and look at the Grey Goose.

Loose battery terminals may be tightened by using a thin sheet of tin foil. Wrap the foil around the cable end, and the terminals can be plugged tightly. When the retaining nut is drawn tight a perfect contact will be made.

Loose battery terminals may be tightened by using a thin sheet of tin foil. Wrap the foil around the cable end, and the terminals can be plugged tightly. When the retaining nut is drawn tight a perfect contact will be made.

Mr. Charles H. Rude of Harrisburg, Illinois, sends a helpful suggestion. Mr. Rude keeps a list of all the automobile owners in his county and whenever possible a report is kept of the proper time for each person on the list to have service on his battery. About 25 people on this list are called by telephone every day and notified that their battery needs attention and they are to call at the station for a free test.

If the car owner has never patronized the service station before, Mr. Rude has a talk with him about his battery and gives him the best possible advice on its care. In almost every instance the party is grateful for the information and thanks him cordially for the telephone call. At least 40 per cent of the people called respond to the invitation and visit his station.

When removing spring shackles it is good policy to run a pipe cleaner or a piece of wire through the lubrication recess in order to remove all foreign substances and old grease.

The Sunlite Dry Storage Battery

Patent Pending

A perfected product of higher efficiency than the ordinary battery—not to be confused with the gelatin and other types of so-called dry batteries, but a chemically pure mineral cell that can be charged and discharged in the usual way.

Points of Superiority

1. No terminal corrosion
2. Will not freeze
3. No liquid
4. No separators
5. No deterioration when idle
6. No leaky jars
7. No buckled or warped plates
8. No plate sulphation
9. No deterioration of outer box
10. Cannot be overcharged
11. No service station attention
12. Has higher voltage, greater amperage capacity
13. No fermentation.

This battery is manufactured by a local concern and the inventor, Mr. Frank M. Holmes, is in charge of the construction. The cost is the same as any standard make of wet battery. All elements guaranteed 2 years.

THE MOTORISTS' PROBLEMS

By WILLIAM H. STEWART, JR.

Motor Department: My engine seems to run very badly, runs in circles where water has leaked. What kind of pump should I use? Why isn't there a pump that will run on electricity?—*Reader.*

Carriage pump will not answer the purpose. It will retard radiator and furthermore will not endure the heat. Buy a can of cylinder pump from your auto supply dealer. He can get it for you. If he does not have it in stock, this is a special preparation for gas engine cylinders.

Motor Department: I have a 1924 Oldsmobile and when turning a right hand corner there's a growl which seems to be on left side and when going right wheel end seems to be running over higher elevation than the left the same noise will occur. Thinking you in advance for any information you may offer in locating my trouble.—*E. J.*

The differential unit is in need of repair. This is called upon to function under the conditions you have stated and must need attention. Either take it out and give it a thorough overhauling, replacing badly worn or broken parts.

Motor Department: Could you tell me what size transmission on my Ford car? When pushing clutch in to slow speed it throws drums toward rear car about 1/2 inch and on letting it back it gives it an ever amount of gas, otherwise it will jerk and jump. It better take it out and give it a thorough overhaul. Also I have tightened clutch until it almost drags. I have had transmission out once but it won't run. I have Ford service station, but it is as bad as ever. Tested compression of each cylinder and they do not vary more than two or three pounds. When running good when idling or pulling up a hill.—*C. S.*

The end play is caused by wear and can be eliminated by installing new bearings on the main shaft. Your service station should be able to do this work properly for you.

Motor Department: I have been reading your hints to motorists in motor section of your paper for some time and have appreciated the fact that your paper has done so much for the motorist. I have a 1920 model Little Six Buick touring car which has developed a knock which about ten garage men have failed to find, but never failing to charge for. I have read your editorial about motors for some time but have neglected writing you about my trouble. There is nothing wrong with the running of the motor except a knock, which is constant and annoying to me. I am sure if it is so good to the car for it to be this way. Some garage men say it is characteristic of the Buick to knock but this is the third Buick I have had and I have never heard

of such a knock in it similar to this. It sounds like it was in a tight but they have been examined several times and now valve lifter have been put in all the way through. I have come to the conclusion that it must be in the oil pump as the shaft has an awful lot of lost motion in it. That is play where it receives lubrication. I thought it had too much up and down play. Would these washers placed in shaft stop this and allow oil to be pumped so it should be. Some garage men said it was the pump but it he stopped the pump he would stop the pump action.—*C. K.*

From what you have stated it seems advisable to eliminate the lost motion from the pump shaft. Installing new shaft and bushings if necessary. Wherever there is lost motion in drive shafts, more or less noise is sure to result. It is barely possible that the noise may be due to piston slap in one of the cylinders. Noise resulting from piston slap is very similar to that caused by worn valve push rods.

Motor Department: Can you tell me why my engine bucks and refuses to pick up speed after turning corners or slowing down for any reason? When running twelve miles per hour or over, the bucking doesn't seem to have the proper power it should. Any help you can give me through your motor column will be appreciated.—*W. E.*

Probably the valves need grinding. Weak compression in one or more cylinders would cause your trouble. Take the crank and try each cylinder. The compression should be strong and equal in each, otherwise you cannot expect the engine to pick up the load quickly from low speed or to have any power on hills, etc. At the same time, clean and adjust the spark plugs as well as the distributor points.

Motor Department: On a certain automobile tire it reads something like this: "When inflated to 25 lbs. the car Kgs. Please explain the Kgs. Kgs. in your paper.—*Reader.*

Foreign countries use the metric system. The Kgs. stands for kilograms. Seventy-five pounds U. S. reckoning equals 33 Kgs. foreign reckoning.

Motor Department: New and I judge the value of a used car I have a chance to get several at a reduced price, but do not know how to judge them.—*L. P.*

You cannot without long experience. A rough estimate may be made as follows: Look over the thread to see if it is badly worn and is not filled with small cuts and scale holes. See that heads are in good condition. Also be sure that the rubber has life and is not old and dried out.

Motor Department: Please let me know through your query column how to prevent the acid leaking up the positive post of my battery. The

best gauge leaves. How can it be checked?—*Reader.*

It is best to take your battery to the nearest battery service station and let them make the standard repairs. You cannot prevent the acid from attacking the posts where there is a leak. Even the acid fumes from the vent caps will make more or less corrosion at the terminals. Keep the terminals clean and keep them covered with vasoline. This treatment will reduce the annoyance to a minimum.

Motor Department: I have had trouble from the very beginning with the brake on the right hand wheel. I thought I had it fixed, but after running a few miles the brake drum became so hot that you cannot touch it with your hand. The trouble seems to be with the foot brake. Have you had trouble like this before and can you offer me a remedy? I shall appreciate an explanation or any helpful advice.—*T. K.*

Would suggest that you make careful inspection and note whether the brake drum is properly centered on the axle. If the drum is a little off center there will be a constant drag which can hardly be overcome by adjustment. The brakes used must be centered on the axle housing, and then the brake drum must be centered on the wheel. By checking these you will undoubtedly locate the cause of the trouble. Be sure that the brake shoes release as they should. Sometimes the installation of a spring will accomplish this and prevent the brakes from dragging.

Motor Department: My car has given me considerable trouble by overheating this summer. I have cleaned the radiator and water jacket and installed a new pump and hose connections. The fan works properly and the mixture of the carburetor is not too rich. The lubrication of my motor is perfect. I believe the trouble is due to faulty design. Can you suggest anything that will help me?

Would suggest that you cut larger air vents in the sides of the hood which covers the engine. These vents should open toward the rear, so as to let the hot air out. This will improve the cooling facilities of your engine. Also check up the valve timing and the spark timing. A late spark will cause the trouble.

Helpful Hints.
 If by any reason the wire terminals of the generator get shifted it will be important to know the positive from the negative in order to connect properly to the storage battery. By a small portion of battery fluid or salt water in a tumbler, you will note that bubbles form quickly on the negative.

Watch the brushes of the generator occasionally to see if they are sparking. This may be due to dirty commutator, rough from burning, or worn out of true. The brushes may not be properly fitted, they may be stuck in the guide, have a weak spring, or be used up. When sparking is noticed have the trouble investigated immediately as the commutator will be badly damaged and the battery will not receive the proper charge.

Among the Dealers

Frank Klein is still where the cool Gulf breezes blow, catching big fish and having a good time generally. Walter Daugherty and his strong arm squad are busy hanging up new records to show the boss when he gets back.

Salesmen Price and Hamilton of the Lloyd Weaver company drove a couple of cars up from Dallas last week. It's a tough fight to get cars these days.

Hugh Weaver reports the following Nash deliveries for the week: Nash Four touring to W. D. Seedy; Nash Four roadster to Ott Mautz; Nash Six touring to B. R. Nobis of Iowa Park; Nash Six touring to I. S. O. Hovick of Seymour. The above in addition to several used car deliveries.

A. L. Bromberg, assistant manager of Sonshorn Bros. Dallas, is in the city calling on the trade with B. F. Williams in the interest of Amalite products. Mr. Williams has built up a remarkable business in this territory in the comparatively short time he has been here.

J. M. McFall, J. A. McFall and L. M. Croger attended a meeting in Dallas last Saturday of Dodge Brothers dealers given in honor of D. A. Carson, Dodge Brothers' district representative, who has been transferred from Dallas to Atlanta. The dinner was also a welcome to the

incoming manager, Gen. S. Hill, who comes to Dallas from the Chicago office.

L. L. Croger, general manager of McFall Brothers, reports that four car loads of cars were unloaded the past week, but that the waiting list continues to grow.

Charlie Klein is continuing to sell Buicks as fast as they come in. L. L. Dismar is on his way north with not a care on his mind.

"Bill" Lamb has his roof for the Gray Goose about finished. The new Willis Saint Claire caterpillar is to be one of the most complete and well appointed in the city. The fortunate dealer who was presented

Arthur Huff has been out of the city on business for the past several days. The Oakland reduction came as a pleasing surprise to the sales force.

Captain Langford has two new Lincoln on display, having brought one of the new sedans up from Dallas last week. It's hard to imagine a more beautiful motor car. The Captain has placed a large order for Lincoln, one of the largest of any Ford dealer in the state.

L. O. Brown was one of the fortunate dealers who was presented

with a price cut last week. The Oldsmobile line was cut in price considerably. Business at the Victory Motor company continues to boom.

A New Price for the Guaranteed New Oakland Six

No other car even approximates the unusual value of the New Oakland Six at its recently reduced price. Judged by any standard—initial cost, economy of operation, comfort, power or long life—the superior value of this car is without equal anywhere. At the price of a "four" it gives you the performance of a "six"—and that performance is guaranteed in writing for 15,000 miles.

Here are the New Prices at Factory:

Roadster	• • \$ 975	2 Pass. Coupe	• • \$1185
Touring Car	• • \$ 995	4 Pass. Coupe	• • \$ 1445
Sport Car	• • \$ 665	Sedan	• • • • \$ 1545

Strong Rear Axle Gears of the New Superior

CHEVROLET

for Economical Transportation

One of the many reasons why the New Superior Chevrolet is outselling all other makes of standard automobiles is the high-grade equipment it offers in a low-priced car.

A leading feature of this equipment is the spiral bevel rear axle gears. They represent the best modern automobile engineering practice. The gears are so designed that two teeth of the pinion gear are always engaged

with the ring gear, greatly increasing the strength of the set, and eliminating the noise common to the old type of straight tooth gear.

The New Superior Model Chevrolet has so many superior features that we invite comparisons, because comparisons sell Chevrolets.

Ask any dealer to tell you why.

CHEVROLET MOTOR COMPANY, DETROIT, MICHIGAN

More Battery Care—More Battery Life

Remember the old shoes you left out on the back porch—how they got stiff, misshapen and useless.

It's like that with a battery. If you neglect it you'll find that you've left the way open for a whole flock of troubles that shorten battery life.

Your battery doesn't need much attention, but it needs a little—and that regularly. The safe way is to let us care for it according to Willard Standards of Service.

Never mind the make. We look after all of 'em!

GRADE CROSSING PLANS MAKE DRIVERS SLOW UP

Slow up before crossing the railroad track or you will get bumped—whether a train is coming or not. That is the idea upon which safety and highway engineers base their efforts to reduce the large number of accidents at railroad grade crossings. It provides the key to the solution of the grade crossing problem.

to slow up at railroad crossings has been under consideration throughout the country for some time. That is the idea upon which safety and highway engineers base their efforts to reduce the large number of accidents at railroad grade crossings. It provides the key to the solution of the grade crossing problem.

The Concrete Ridge Guide Idea.

These "thank-you-mams" are concrete humps across the roadway. They rise up to a height of six inches above the road level and are set about 100 feet from the track.

The "Thank-You-Mam."

Before the motorist reaches this hump he is warned by a sign to slow up for the railroad crossing. If he doesn't heed the warning he strikes the hump at high speed. Result—not so much damage to the automobile as there would be if it had struck a train at the same speed.

The result is the motorist has to slow up for the short curve. If he doesn't the car will jump the ridge and cause damage to itself before it could reach the crossing.

There again the choice is presented to the motorist to slow down or be bumped. But the resultant bump would not be as damaging as a total wreck and fatality on the crossing.

As a depositor of the City National Bank of Commerce you enjoy the protection of \$1,500,000 in capital, of conservative, experienced management which has been tested and developed by 33 years' experience, by United States government supervision, and of federal reserve membership.

WE'LL ALL SOON OWN A CAR; ONE TO SELL FOR \$400

Cheer up. All of us soon will be able to buy a car. Only \$400; that's all that it's going to cost us.

A light weight, air cooled, four-cylinder, four-passenger car to sell for just four hundred iron men is being planned for production in Cleveland.

Right along with this comes the announcement from a Chicago firm that they will put out a steam truck that will go twice as fast as a regular truck without the hood once to adjust any part. At this time, this is the goal they have set.

REDUCTION MADE ON STUDEBAKERS FROM \$70 TO \$300

The Kalm Motor company announces the reduction in Studebaker prices effective August 1, ranging from \$70 to \$300.

The Light Six touring car is now \$975; the Special Six touring \$1,275; and the Big Six touring car \$1,450. These prices are all based on f. o. b. factory.

S. S. S. Fills Out Hollow Cheeks, Thin Limbs!

Men and women—whether you will ever build yourself up to your normal sun-right weight depends on the number of blood-cells in your blood. That's all there is to it. It's a scientific fact. If your blood-cell factory isn't working right you will be run-down, thin, your blood will be in disorder, and perhaps your face will be broken out with pimples, blackheads and eruptions. S. S. S. keeps your blood-cell factory working full time. It helps build new blood-cells. That's why S. S. S. builds up thin, run-down people. It puts firm flesh on your bones, it purifies the whole body. It puts the "pink" in your cheeks. It takes the "brownness" from the eyes and it doles out the "pink" by smoothing out wrinkles in men and women by "plumping" them up. S. S. S. is a natural, vegetable blood-purifier. While you are getting plenty of your skin eruptions, pimples, blackheads, acne, rheumatism, red-eyes, blotches are being removed. The medicinal ingredients of S. S. S. are guaranteed purely vegetable. S. S. S. is sold at all drug stores, in two sizes. The larger size is the more economical.

PART TWO

JIM FERGUSON 128 AND MAYFIELD 89 RESULT OF VOTE

STRAW VOTE TAKEN AT COUNTY HOUSE DURING THE ENTIRE WEEK.

MAJORITY OF VOTES CAST BY JURY MEMBERS

Straw Vote On Sheriff's Race Results 36 For Smith and 20 For Murphy.

Ferguson 128
Mayfield 89
Neither one 3

A straw vote was taken at the court house cigar stand during the past week on the United States senatorial race with the results as above noted. A total of 230 votes were cast, of which number Ferguson received 128.

Three ballots were placed in the ballot box marked either "Neither one" or "I'm agin 'em both." Members of the regular jury panel for the week and members of a special venire of 100 men accounted for the majority of the votes, while the remainder was made up of employees and officers in the court house and local attorneys.

Both the jury for the week and the special venire were summoned by means of the jury wheel, which it is believed is a fair representative body of the voters of the county.

During the week while members of the special venire were awaiting their turn to be called for examination a straw vote was taken among the men on the sheriff's race. The vote stood 36 for Fred Smith and 20 for W. W. Murphy.

IN MEMORIAM

Robert A. Dees, son of Rev. Sam and Mrs. Elmira Reynolds Dees, first saw the light of day July 8, 1868, in White county, Ark., and from his residence at 2322 Q avenue in Wichita Falls, Texas, at 3:00 a. m. August 1, 1922, he passed to his eternal reward.

The funeral services were conducted at 10:00 a. m. next day in St. Paul Methodist church, south on Grant street, by the pastor, assisted by Rev. S. M. Black, P. M. in the presence of a large congregation, and the interment at Rosemont cemetery. The Boy Scouts attended in a body. The Odd Fellows paid the tender tribute of the ceremonial of the organization at the grave. The floral tributes were many and attractive. Touching songs selections were rendered. A boy of Sunday school girls dressed in white and

G. M. C. TRUCKS
GAINES MOTOR SALES CO.

bearing a spray of tube roses were present. Of his father's family there survive five brothers and five sisters and the venerable mother of 74 years. All were present except Mrs. Hensley and Mrs. Mary. Their addresses are: Mrs. E. H. Dees, Geo. D. Dees, L. B. Dees, Mrs. Bessie Ruark, Electra, Texas; Mrs. Mary Ruddle, Marlow, Okla.; Mrs. Sara Pursell, Kennesaw, Texas; Mrs. Etta Barr, Gunter, Texas; J. W. Dees, Olney, Texas; A. A. Dees, Commerce, Texas; M. W. Dees, Dallas, Texas; Mrs. Margie Hensley, Wolfe City, Texas. F. A. Jones, of Wolfe City, Texas, a brother of Mrs. Dees, was also in attendance.

Twenty seven years ago (Oct. 23) Brother Dees was happily married to Miss Belle Jones of Panna county, Texas. Five sons and one daughter were born to them, two of whom died in infancy. With their mother the following children survive: Lester, Miss Lammie, Charlie and Wilson.

Under the ministry of Rev. C. O. Jones, at Leonard, Texas, 23 years ago, our Brother Dees was soundly converted and soon after united with the Methodist Episcopal church, south, serving through the subsequent years as Sunday school superintendent, steward, trustee and frequently as delegate to district conference. The wholehearted interest he was able to invest in the welfare of childhood and youth eminently fitted him for successful service in the Sunday school.

In the pursuit of his work as a skilled mechanic and contractor, he was away from home frequently, but has been known to travel a score or more of miles to be at his post of duty as superintendent on Sunday.

We shall sorely miss him in the little mission church here in the city where he has labored so self-sacrificingly and successfully, but with Charles Wesley we believe "God buries His workmen and carries on His work."

W. A. BETTS, Pastor.

FORMER WICHITAN IS NOMINATED TO OFFICE IN MISSOURI

John Van Cleave, a former resident of Wichita Falls and Wichita county, has been nominated in the democratic primaries of Missouri for the state legislature. Announcement of his victory was received Saturday morning by Attorney Shilida Hoyer.

Mr. Van Cleave stumped his legislative district on the issues of the day and also made his position clear as being opposed to the Ku Klux Klan. The message to Mr. Hoyer also carried the information that he had a majority over the republican nominee of over 2,000 votes.

Mr. Van Cleave owns a large amount of all property in this county and will be remembered by many, having served in the capacity of United States deputy marshal and also as a representative of the department of justice.

The City National Bank of Commerce regards the customer as the most important person in the bank. It prospers because it desires his prosperity—and has organized its service to further it. (adv.)

LAST CEMENT IS POURED ON CLAY COUNTY HIGHWAY

TIBBETTS CONSTRUCTION CO. CONCLUDES ITS WORK SATURDAY.

M'CALLUM HAS ALSO FINISHED FIRST LAP

Road in Burkburnett Will Be Completed By Not Later Than Wednesday.

The last batch of cement was poured on the Clay county road Saturday evening. The Tibbetts Construction company reported that it had completed its work on the road with the exception of covering the last stretch of concrete laid.

It will now require 26 days of curing before the entire road will be open for traffic.

The McCullum Construction company engaged at work on the road out of Electra has also completed its first lap of three miles and has moved its machinery to the farther location.

Potts and Prentice will complete the Burkburnett road into the city limits by not later than Wednesday. It was announced by the office Saturday morning. This of course bars any breakdowns or lack of material.

During the past week both mixers of Potts and Prentice closed down on account of lack of material and water trouble. It was stated, however that a sufficient amount of material had arrived or was in transit to complete the paving to the city limits. If the road is completed by Wednesday night it will be opened for traffic on or about Labor Day.

Preparations are being made by the citizens of Electra and Burkburnett to hold a celebration on the day that the new highway is opened for traffic.

NO MORE CRIMINAL WORK UNTIL GRAND JURY RE-CONVENES

When the jury in the Ernest Chapman case reported Friday evening at 6 o'clock finding him guilty and assessing his punishment at a two years' suspended sentence it was announced that no more criminal work would be taken up in the 30th district court until August 21, when the grand jury reconvenes.

The jury was granted a recess in the middle of July, having reported that it had not concluded its work.

Trial of civil cases which have had special settings will be held before Judge H. R. Wilson during the coming week. A jury panel has been summoned and ordered to report Monday morning at 9 o'clock.

REPUBLICANS NO LONGER HAVE AGGRESSIVE LEADERS OF TYPE OF LATE HANNA OR ROOSEVELT

SULLIVAN

WASHINGTON, D. C., Aug. 5.—That the chief lack and the chief need of this country is political leadership has been so often repeated that it is no new story. The fact remains for the purpose of this article, only because certain circumstances make it possible to give a picture of one kind of political leader—a leader of the republican party once had, but today has not.

Mr. Dear Kohlsaat: I do not agree with you on the Porto Rico tariff measure, and I honestly believe if you had been here you would not have taken such a position, but as I have no idea that I can change your views, I will not enter into an argument. I feel my responsibilities and shall long be guided by you here, which I know is right. Sincerely yours, M. A. HANNA.

The Girl Who Is Hiking Alone Round the World

Teresa Tromp, M. A.,
Who Is Girdling the
Globe on Foot.

**After Measuring Off the United States
Foot by Foot from Canada to Mexico and from the
Pacific to the Atlantic, Teresa Tromp Is Now on
Her Way to Europe, Having Stopped
Off Here and There to Earn a College Degree or Two.**

TERESA TROMP, M. A., of Ferndale, Washington, is off on the second leg of what she proposes shall be a walking tour around the world. With knapsack and blanket roll on her back and alone, save for the presence of a husky Colt six-shooter, Miss Tromp has struck out for Canada, and the Hudson's Bay country. This being completed, she will sail for Europe and there start a dash that will take her across the face of two continents.

Miss Tromp has already measured the United States by stepping it off foot for foot from the Canadian border to Mexico and from the Pacific Coast to the Atlantic. Her walking trips have been interspersed with educational and business activities of various kinds. She was graduated from college at Bellingham, Washington, took a Bachelor of Arts degree at the University of Washington, studied shorthand and book-keeping at a business college, and got a certificate from a school of automobile mechanics.

After hiking from Los Angeles, California, to Globe, Arizona, Miss Tromp accepted a position as school teacher at the latter town. She gave up this position in June, 1921, to start from Globe on her tour around the globe, but abandoned the tour long enough to win a degree of Master of Arts in philosophy at Columbia University in New York. She also passed the qualifying examinations for the degree of Doctor of Philosophy.

But one year was a sufficient academic interlude for Miss

Tromp and she has again hit the open road. This time she's not on schedule. She's just walking.

Miss Tromp made the trip from Globe to New York in three months. She covered from ten to forty miles every day, crossing deserts, mountains and plains, and encountering all kinds of weather—the scorching heat of the desert, the chilly nights on lonely mountain peaks, and the electric storms of the Mississippi basin. She shirked none of the vicissitudes of the road; she rather welcomed them as adventures, for it is an unquenchable romantic ardor that has driven her onward.

When she ran into a half-civilized tribe of Indians she didn't give them an open berth. She made friends with them and ate with them. When crossing the desert she slept out in the open. When she felt she was a little behind schedule she hopped a freight train and rode all night without getting caught. And many times she walked all day without food or water.

One of the visible results of Miss Tromp's cross-country tour was the interest in hiking she created all along her route. At several points, groups of young men were so inspired by her example that they formed clubs and planned itineraries for the summer.

But Miss Tromp is not primarily an apostle either of the open air or of a walking cult. An eager curiosity for new scenes, new faces and for the adventure that may lurk just around the bend of the road is what has made her the most celebrated woman hiker in America.

"The Greatest Enemy of Babies is FEAR."

But Science Now Plans to Stand Guard at the Door of the Infant's Mind and Keep Out Those Fears Which Experiments Have Shown Are Not Instinctive, but Needless Acquired.

Jimmy is Here Swinging to and Fro Over a Young Chasm Twenty Feet Deep. This Sight Would Terrify Most Children.

Little Jimmy Syracuse, Eighteen Months Old, Who Has Been Taught to Live Without Fear—and Without Clothing, Winter and Summer. He Spends All of His Time in the Open in His Father's Private Park in Upper Manhattan Island.

A WORLD-WIDE fight against the greatest enemy of mankind—Fear—may soon be started if the dream of a group of American psychologists is realized. This fight will be conducted along purely scientific lines and as a necessary preliminary to the main campaign an exhaustive study in infant psychology will first have to be made.

The infant mind, in fact, will be the main theatre of action, for it is within the first three years of life that the thousands of fear states which afflict humanity are acquired.

This, at least, is the conclusion of scientists who have already been making experiments in infant psychology. And this will be their guiding principle in their attempt to eliminate unnatural fears from the lives of human beings.

Dr. John B. Watson, the celebrated New York psychologist, in a recently issued statement made an appeal for the founding of an institution where the human infant could be studied from birth to at least three years of age. It would lead, he said, to an untold wealth of new scientific conclusions and to a practical and common sense set of data upon the psychological care of the infant. He thought it was not too much to expect that an endowment fund for such a cause as this could be raised when more than the income from a million dollars was being spent annually in the study of the sea urchin, the coral and the jelly-fish.

A shining illustration of the child mind from which all unnatural fears have been excluded is that furnished by Little Jimmy Syracuse of New York, whose pictures appear on this page.

Jimmy Syracuse is eighteen months old and has none of the commonly acquired fears of childhood and to a limited extent has combated his inherited fears. He is not afraid of the dark, the water, animals or great heights. From earli-

est infancy he has been taught to live a free, fearless and natural life.

His father owns a private park in upper Manhattan Island and Jimmy roams around in it without any clothes, winter and summer. He never learned to fear the common accidents of childhood and for that reason he climbs trees, scales up and down rocks, and disports generally as a young animal might.

Another case of a child who has none of the usual fear responses is that of Bianca Blackburn of Los Angeles, California. Most children pick up a fear of water from their elders and as a consequence have a relatively difficult time learning to swim. Bianca, at the age of three, swims with the ease of a young puppy and makes high dives without a trace of hesitancy.

The Two Types of Fear

As a result of extensive experimental work done in the laboratory of Johns Hopkins University, Dr. Watson established, in a manner conclusive to himself and his fellow scientists, that only two types of fear were instinctive with children. These are (1) the sudden removal of support and (2) a loud sound such as the striking of a long steel bar with a hammer.

In an article written for the Scientific Monthly, Dr. Watson said:

"These are the common stimuli (to fear) which are present almost daily in the life of every infant. The reaction or response to such stimuli is a sudden catching of the breath, clenching randomly with the hands, the sudden closing of the eyes and the puckering of the lips followed in some cases by crying. In older children these reactions appear and in addition there is crawling away, running away, and in some cases, hiding the face. We have found no other stimuli which will call forth fear in the very young infant. It has been often stated that children are

afraid of the dark, or animals, of furry objects in general. . . . This is not the case."

These unnatural or artificial fears which are so prevalent in childhood and which finally become basic elements in a person's character, are acquired, as Dr. Watson goes on to prove, by association of ideas. In other words, one of the instinctive stimuli to fear—a sudden removal of support or a loud sound—is linked up in some forcible manner with some other object or situation and thereafter this second and hitherto harmless stimulus, becomes a cause of fear.

For example, a child has no natural fear of the dark. But if the door to a darkened room in which he is lying is violently slammed he may thereafter associate all dark places with this loud sound and therefore come to fear them. Likewise, if an animal is produced in front of a child at the same time a steel bar or tin pan is struck behind him, this animal will thereafter become a stimulus to fear. And in most cases, all other animals resembling the one with which the experiment was made will excite a similar fear.

In his article in the Scientific Monthly, Dr. Watson describes several successive experiments with an infant named Albert.

Between the ages of 165 and 172 days, this child was introduced to dogs, cats, mice, pigeons and wild animals at the zoo. The tests were continued by taking the child in his chair to a dark room and building a bonfire in front of him. In no case did he exhibit the slightest fear. In practically every case he would reach out his hand and try to stroke the object.

One of the animals presented was a white rat. Later, at the age of eleven months and three days, the following experiment was made:

A white rat was suddenly taken from the

basket and presented to Albert. He began to touch the animal the rat was struck immediately behind his head. The infant jumped violently and fell forward, burying his face in the mattress. He did not cry, however.

In order not to disturb the child unduly no further tests were given for one week. Albert was then brought back into the laboratory and the rat was suddenly presented without a sound. There was a steady fixation, but no tendency at first to reach for the rat. The rat was then placed nearer, whereupon tentative reaching movements were begun with the right hand. When the rat nosed the infant's left hand, the hand was immediately withdrawn.

The combined stimulation of rat and loud noise was then offered and Albert showed the common symptoms of fear. After this had been repeated once or twice the rat was brought out alone and the baby began to cry as soon as he caught sight of the animal. A similar experiment made after thirty days had elapsed showed that the fear of the rat still existed in the child's mind and it was also demonstrated that this fear had been transferred to similar appearing objects such as rabbits, dogs, fur coats and cotton wool. In commenting on these experiments Dr. Watson said:

Importance of Emotional Reaction

"We see that the conditioned fear to the rat which was experimentally set up transferred to many other objects. The transfer was immediate and without any additional experience in connection with these other objects. In these transferred emotional reactions we thus would find a reason for the widespread change in the personality of children and possibly even of adults once even a strongly conditioned emotional reaction has been set up to any object or situation. It accounts for the many unreasoning fears and for a good deal of the sensitiveness of individuals to objects for which no adequate ground for such behavior can be offered in the past history of that individual. The importance of such a factor in shaping the life of the child needs no further emphasis from us.

"At present we are engaged upon the study of methods by means of which such directly conditioned fear responses and their transfers may be removed. The importance of establishing methods for the removal of these undesirable reactions is apparent to all. That such conditioned reactions are present in the life of every child many parents can testify. We have repeatedly had children brought to us whose emotional life had been so warped and twisted by such factors that the formation of the stable habits by means of which the race must maintain itself was seriously interfered with.

"The sceptic will be inclined to say that such things happen in the life of every day, but that the child immediately puts them aside and soon forgets or outgrows such happenings. We have not the full experimental data to combat this view, but we have the evidence to show that in Albert at least, both the original fear of the rat and the transferred emotional reactions remained after a period of thirty days in which no experiments were made. Furthermore, the latter were still called out by the same objects which called them out in the above test. Our view is that such happenings are permanently impressed upon the growing child. They remain not only as a part of his reaction system, but also they tend to modify or prevent, by limiting the number of objects that he deals with, the formation of constructive habits. In other words, they modify his vocational future. When we consider that these conditioned emotional responses are being constantly set up in the growing child, not only in the realm of fear but in the realm of love and rage, and that they bring in their train a host of transferred responses, we begin to realize the importance of the pre-school age of the child."

Dr. Watson later said that parents and family physician should stand guard at the door of the infant mind and keep out these unnatural fears. In cases where conditioned fear responses were set up by accident, steps should be taken to remove them as soon as discovered. In order to do this, however, a great deal more data bearing on infant psychology will have to be compiled and placed in the hands of parents. It is for the purpose of making extensive experiments possibly that he hopes to see an institution founded.

Fear of the Water Is Another Bogey of Childhood—But Bianca Blackburn of Los Angeles Makes High Dives from Her Father's Hand and Swims Like a Fish.

Roma Has a Quilted
Collar and Revers
Metallic
Cloth.

The Plume of the Ostrich Has Returned to Fashion, but Instead of a Hat It Adorns the Collar and Front of This Cape of Brown Crepe and Copper Lace.

By Mme. Frances
The Famous Creator of Fashions

There is a decided charm about the wrap for evening. The woman who possesses a becoming evening wrap experiences a feeling of ease and assurance as she slips into it and pulls the soft folds of its collar up about her throat.

From the tip of her pretty evening slippers to the top of her well-coiffured head she is at her best, and the wrap heightens her charm as it folds about her. She knows that she is perfectly gowned for the occasion and she feels at ease and eager to cope with any situation that may arise.

There are charming things offered in wraps this season, and among the newest and smartest are the lovely metal cloths that are being used.

If the wrap is not entirely of metal cloth it uses this shimmering material in combination with some other fabric. I am showing here a wrap of this type which is truly stunning in effect, for it collars and panels a crepe roma cape in metal cloth of a rich burnished copper.

For Beauty and Comfort

The cape itself is gathered into a straight collar of the copper tissue, which is wide enough to fold back in a double thickness and still come up high about the chin. Long slim panels of the crepe lined in copper drop from the collar and hang loosely, except at one point where they tuck up beneath the hem of the skirt.

This wrap, like most others designed to be worn in the summer and early fall, is unlined. Their mission is two-fold: to be becoming and to cover the fragile evening frock beneath. The more practical end—to give warmth—is left to the winter wrap where warmth becomes a necessity.

Tissue cloth, in silver, gold, copper and the most heavenly tints which introduce a thread of blue or green or pink, is among

A Simple Circular Cape of Yellow Velvet, but What a Difference in the Ways One Can Wear It.

the season's smartest fabrics. The newest tissue cloth is very shiny and soft and has more gleam than the old. Also, it does not tarnish as easily. Because of this it finds an increasing field, and it is growing in popularity for negligees, tea-gowns and summer evening dresses.

The premiere of the Russian ballet in Paris was brilliant in its use of cloth of silver. The costumes were obviously very smart and new, and this sponsoring of silver cloth for such an occasion meant that it would be used all summer by creators of smart gowns. The prophecy was followed through, for it has been as enthusiastically received as ever it was for winter party frocks.

Interesting evening wraps are seen, too, in gaufrage, a new fabric which is growing in favor among my smartest clientele. It is a tissue cloth, but instead of being smooth and shimmering, it reflects broken lights because it is crinkled all over the surface.

Copper color is such a favored tone that I am using it in crepe roma again in the wrap that displays lace and ostrich feathers for trimming. The lace is a deep burnished copper and the cape is fulled where the lace is put on. The cape is made in three sections; the wide back width, which is fulled, and two plain widths, which loop at the front and leave an opening for the hands to come through.

Long brown ostrich feathers are applied to an upstanding band about the neck and their soft lengths sweep back to form an interesting frame for her face. This trimming forms another smart new note. A variation is seen in a bright red crepe cape which outlines its neck and both sides of the front with bright red ostrich feathers.

The velvet evening wrap is always appealing because of its softness and the becoming folds with which it drapes the wearer's figure.

The same stunning cape could lose much on a person with less chic.

Where the wrap is lined, one catches an alluring glimpse of the lining now and then. The yellow velvet is lined in white charmeuse, very thin so that a faint suggestion of yellow shows through it.

Bright red canton crepe lines the fourth wrap, which is of black Salome velvet. A loose panel cut on circular lines swings from one shoulder and is used as a throw. A smart note is seen in the roll collar, which is stuffed like a pincushion.

It will not be inappropriate here to mention a few of the points that promise to be salient factors for fall.

The first street dresses will be for the most part of serge, in a fine soft quality. This is especially adaptable to the soft lines of the cloth dress, which this season is not to be too strictly tailored.

Serge for Street Wear

I am showing a clever frock of navy serge on youthful lines. There is a set-in girdle of the material, a little nearer the normal waistline than in the frocks of last season. Narrow handmade bands in tones of violet and blue are set on, forming a panel down the front which is overlapped by a panel which comes up from the hem. The navy chifton sleeves repeat the use of color bands.

Another smart note for fall will be seen in the skirt which has its back portion straight and its front half on wide circular lines. This frock is often made with a plain blouse portion, cut straight across the neckline and all together innocent of sleeves.

A smart French woman appeared in a white broadcloth frock like this, with which she wore fringed gauntlet gloves. At the races these gauntlet gloves were often seen on arms which were otherwise bare, except for a bracelet or two, usually worn one above the elbow and one below.

Crepe with a very flat surface is sponsored, too, for fall. A stunning mocha crepe frock shows three diagonal lines. The first appears at the neck, which is cut at one side as if designed to be square, and then slopes up to the other shoulder. The second is at the lowered waistline, where a fitted bodice ends in a diagonal slant, and the third is at the hem, which follows the same slant as the waistline. The new neckline, by the way, goes back to 1890 for its inspiration. It is almost straight across the front and slopes down a bit at the back.

There is much, too, in the way an evening wrap is worn. In fact, almost as much as there is in the wrap itself. Take the fur-trimmed cape above. It is of yellow velvet, trimmed entirely in white fox fur and made on slightly circular lines. There is an infinite amount of dash and spirit in the way the wearer holds it about her.
