### **Around Courthouse**

A bunch of workmen are busy this week building concrete side walks around the new \$60,000 court house. The walks are being built on all four sides. They were set in from the old curb about twefve feet. This was done to give more room for parking space in the future.

In building a town in this western country it is wise to lay it off just like you were going to make a city out of it. Take for an example Amarilla, we can remember when it was a wide place in the road, and the thriving city tensive and will thrill the spec- of Lubbock. When the writer first passed through Lubbock it was only a few houses scattered over a section of land. Now see where it headed for. One can never tell, Muleshoe may someday be larger Met with Mrs. Stewart than Amarillo or Lubbock. When you build, build for the future. Look ahead "hook your wagon to a star".

### Why Not Plant a Home Orchard

Why not begin now to make plans for a small home orchard N. L. Green closed a deal this this winter? It will repay you week with R. B. and Dick Jones many times for the money and of this very attractive food. The dise has already started to arrive. N. L. (Shad) Green stated that average person, if asked why he not have as much as he would R. B. and Dick Jones are both like to have or should have. On here now, looking after the deto make the trip distributing the good business men and are native the other hand, the man who has tails of the opening of the store. of the Plains. R. B. was at one his orchard has all the fruit he He is a young man, but has had Benson and Germany both have time connecred with one of the needs at his own home, and frestated that this method was the banks in Tahoka, and is thor- quenty can sell enough to his dry goods business. He stated best they could do under the cir- onghly familiar with conditions neighbors to cover all expense of the firm would carry only first cumstances, but that they would and the progress of this wonder- the trees. Fruits such as peaches class merchandise, at prices you have much preferred the staging ful country. They have been pears, plums and grapes can be will want to pay. of the annual good will tours in watching the progress of this grown in sufficient quantities order to meet with our people and city and valley for some time, and so that an ample supply for the busness men and citizens in wishto cement the friendships that ex stated that they were well year round use may be canned ing for them a wonderful busiand preserved. The farmer who ness. practices diversification and lives from his farm must consider his fruit trees a very necessary part of his living.

You may see that Texas is not an orcharding state. It is true that other crops of much more value than the fruit crop, but there are sections of the State where the orchords are the equal of any in the country. We find buildings is to be two story' 25x citrus fruits, peaches, plums, figs 80 feet, rooms over a grocery apples and pecans, grown on a store, the other will be 25x80 commercial scale, in different one story. We did not learn what parts of the State. While all of was to go in this building. They these fruits will do well in any will be constructed of brick and one section, it is safe to say that concrete. there is no section in Texas, exrent fruits will not succeed.

One of the most important be two story. things in starting an orchard anywhere is the selection of the prop How a Farmer er varieties.

Especially true in the home orchard, because not only do we want varieties that are adapted to the section, but we want several varieties that will give fruit of the same kind over as long a season as possible. The best idea in choosing varieties is to consult nearby nurserymen who will be interested in selling you trees which will grow and bear fruit in your own section. Perhaps you may not be able to grow the best varieties of pears, apples, or peaches in your locality, but even Kieffer pears are better than none at all.

### of Commissioners Held in Amarillo

The State Convention of the County Judges and County commissioners Association was held in Amarillo, Monday and Tuesday of this week. This convention From Court House of the men who hold these two offices in each county of the state in is not held for the purpose of having a good time, but for the purpose of discussing sanely, the problems that confrunt the Commissioners courts, which are many, and we might say parenthetically, that some of these problems are notty.

Two of the really big H. R. Kress who has been a- that they must deal with are way all summer, was shaking that of taxation and highhands with the Courthouse Gang ways. Naturally these problems were given the major portion of Commisioner Wm. S. F. Mat- time at the convention. Tax rethiesen and Fred Rice attended duction was what everyone the State convention of County wanted, but no one seem to be Judges and Commissioners at Am- wise enough to suggest a panacea for this rising inflection of tax-Mr. Harris of Dallas was a ation. Come to think about it the Commissioners' Court by right ought to obey the will and demands of the majority of its community called at the County people. The people are demanding better roads and highways. better schools, and better public buildings. The only way or ways that the Commissioners Courts have to pay the bills for these better things, is by a system of taxation. If you expect to have these things you should prepare yourselves to pay for them, via a system of taxation. Any Commissioners court in any Texas county, if they should be arbitrary, by stopping all development of every character, could reduce taxation materially. But should the people desire, and by vote declare themselves willing to be lifted out of the mud and chug holes in the highways by voting a sum of money to build a system of good roads, it becomes the duty of such commissioners court to build such a system of highways, even tho every member of the court is against it.

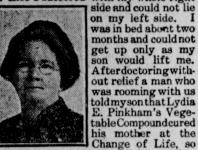

Attention was called to the danger of Federal controll of our cause the Federal Government

#### SOWS ON PASTURE NEED SOME GRAIN

After the sows have weaned their bigs and have been re-bred for fall liters, they can be easily and cheaply handled on pastures. While upon pasture they will consume about one pound of grain to each 100 pounds of live weight. Brood sows will manage to live upon pasture without grain, but it is a mistake to graze young pregnant sows on pasture without grain. Both the sow and their pigs will be stunted. How much grain and when to feed it requires good feeder judgment. Young sows and sows thin in flesh need more grain while on pasture than do mature sows and sows that are strong and in good flesh.

The kind of grain is not so important if the sows are in good pasture like alfalfa, clover or rape. Many successful hog men feed one-quarter to one-half pound of tankage daily to each brood sow before farrowing in addition to the grain and pasture. The addition of tankage is more necessary if the sows are upon a pasture like bluegrass, bromegrass, rye, etc., which are not legumes.

About ten days to two weeks before the sows are due to farrow, they are removed from the pasture to the place where they will finally farrow. This places them under closer observation of the feeder and he can feed them especially prepared rations which are both nutritious and laxative. Such management makes for more vigorous pigs and it puts the sows in better condition for farrowing and for the care of their litter.

Now is the time to plan for your hog pastures .- B. W. Fairbanks, Extension Service, Colorado Agricultural College

### Bovine Tuberculosis Is

Fast Being Eradicated

With 89 counties on the modifiedaccredited list of the United States Department of Agriculture July 1, eradication of bovine tuberculosis from the country is showing unusual progress. A place on the modified-accredited list means that the county has completed a test of all the cattle within its borders, that infection was less than one-half of 1 per cent, and that all reactors were promptly re-

The 89 countles show a noteworthy increase over 53, the figure on the first of the year. Besides the countywide testing, an increase of approximately 12,000 in the number of accredited herds occurred during the same time. Coupled with this progress is the removal and slaughter each month of from 10,000 to 20,000 cattle found through systematic testing to be tuberculous. The removal of these diseased animals greatly reduces the menace to healthy stock and also to people. According to a summary of the work up to July 1, just issued by are not getting the genuine Bayer the bureau of animal industry, United States Department of Agriculture, a total of 1,120,536 herds of cattle were under supervision for the eradication

of tuberculosis at the end of June.

The continued popularity of systematic tuberculin testing under state and federal supervision is evidenced by a waiting tist of more than 400,000 herds ready for the test as soon as the veterinary inspectors can reach

### Separate Pen for Sheep

The ewes that are to lamb soon should be separated from the rest of the flock and, if it can be conveniently done, each ewe should be kept in a small pen by herself. After the lambs are a few days old the ewes with small lambs may be allowed to run together. The ewes should be given a small allowance of grain, which may be increased up to about a pound apiece a day after the lambs become large enough to consume the milk.

### Live Stock Hints

Good pastures are essential for

Ewes should not be allowed to get wet, for a drenched fleece dries very slowly.

profitable beef production.

Tests show that scrub hogs require 26 per cent more feed than pure breds to make 100 pounds of gain. About the same per cent is required in other farm animals.

Since the floors of many sheep barns are usually about on the same level as the surrounding ground extra precautions are necessary during thawing spells to keep water from running into the barn.

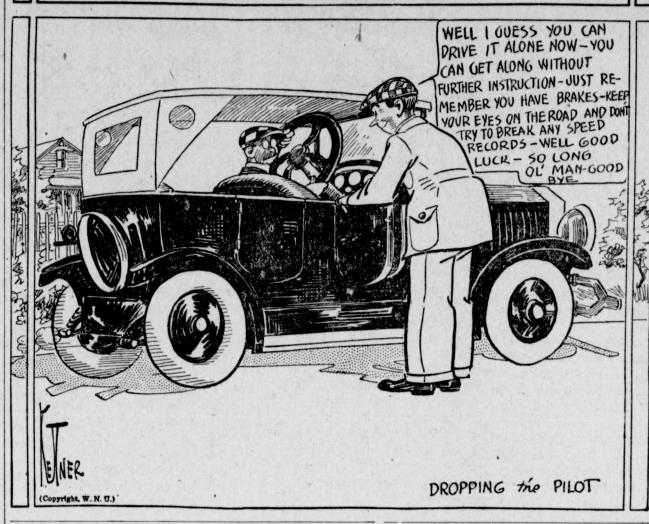

### Trade Winds

The rotation of the earth and the movement of the air toward the equatorial regions to supply the vacancy caused by heating, rarefaction and consequent motion upward of the air there gives rise to trade winds. Trade winds blow continually in the same course of trade toward the equator. In the northern hemisphere they blow rom the northeast, and in the southern nemisphere from the southeast.

#### MAKE VINEGAR OF UNEXCELLED QUALITY

Apples Are Commonly Used for Making Vinegar.

vinegar making as they contain sugar in the proper proportion and other necessary or desirable substances, says the United States Department of Agriculture. Vinegar is the result of two distinct fermentation processesan alcoholic fermentation, followed by an acetic fermentation.

Apples are most commonly used in the United States, but vinegar of unexcelled quality can be made from grapes, and very acceptable vinegar is made from oranges, peaches, persimmons, pears, berries and watermelons. Vinegar made from red raspberries will retain indefinitely the odor and flavor of the fruit, which makes it de- This "mother of vinegar," which is sirable for flavoring foods and bev-

#### Much Material Wasted.

Fruit enough to make all the year's supply of vinegar is wasted in many homes. Surplus or inferior grades of fruit not desired for immediate use or for canning may often be turned into a useful product at a merely nominal of three to six-gallon capacity. These should have straight sides and open tering vinegar. tops and should be provided with covers. With most fruits used it is impossible to separate the juice from the pulp before the alcoholic fermentation has taken place, so a yeast fruit. The juice only may be used if it can be extracted easily. The following method, which calls for peaches, may be used, with slight variations, for any fruits.

Ripe fruit is selected. Overripe fruit may be used if decayed portions are removed. Enough peaches are thirds full after they have been cut apparatus.

(Prepared by the United States Department in two and crushed with a potato Many fruit juices are well suited to masher. The stones need not be re-Mix a cake of compressed yeast with a small portion of the juice and add it to the mash. Cover the jar with a double layer of cheesecloth to keep out insects, and a cover to exclude light. Stir the mash daily. In four to six days alcoholic fermentation will be complete.

The juice is then separated from the mash by straining it through a cheesecloth, or using a hand press at the last. Return the juice to the jar with a starter in the form of vinegar. Use one part of the vinegar to four parts of juice. Cover as before. Within a few days a thin coating or film will appear on the surface. composed almost entirely of acetic bacteria, is essential for a successful fermentation. Great care, therefore, should be taken not to cause it to fall by stirring or agitation.

#### To Determine Acidity.

During the acetic fermentation frequent tests should be made to determine the increase in acidity. As soon cost. The best receptacles for making as this has reached its maximum the vinegar in the home are stone jars vinegar is filtered and bottled. Canton flannel is a good material for fil-

The strength of the vinegar can be determined roughly by tasting. When the vinegar reaches a point where it is comparable in taste to that of a good, strong vinegar, it may be regardinoculation is made in a mash of the ed as complete. For accurate results a vinegar tester, in which the strength of the vinegar is determined by the volume of gas given off when bicarbonate of soda (baking soda) is treated with a measured quantity of the vinegar to be tested, should be used. Farmers' Bulletin 1424 on "Making Vinegar in the Home and on the used to fill a four-gallon jar about two- | Farm," gives a full description of this

#### PIECE THAT DON'T SPOIL APPETITE

#### Child Is Fortunate Who Has hot or cold, and like potato chips, they Been Brought Up to Like Milk.

(Prepared by the United States Department

Is your child hungry between meals or has she merely formed the habit of eating at all hours? It is easy to find the answer to this question by checking up on the kind of food ste wants between meals or by observing whether or not she eats a full meal at the table without fussing. A rapidly growing child who is very active may well have food in the middle of the forenoon and afternoon if it does not dull the appetite for regular meals, according to the United States Department of Agriculture. But the patronage of the tce-cream-cone vendor and the everlast-

Orange Juice and Bread and Butter ing munching of candy, half-ripe bananas and pickles forms a vicious habit to which American children are they ruin appetite, digestion, disposiand a simple bread and butter sandwich while the neighbor's children are eating all-day suckers. An apple, orange or other fruit in season or a glass of cool fruit juice is especially desirable because it provides a part of the vitamin and mineral content of the diet needed for proper growth and

### French Fried Onion Has Very Mild, Sweet Flavor

French fried onions have a very mild, sweet flavor. They may be served may be kept for several days. If they are to be used when cold they should be fried in oil, since lard or fat which is solid at room temperature will cause them to look cloudy when no longer hot enough to keep the fat melted.

The United States Department of Agriculture gives the following directions for making them:

### French Fried Onions.

Shave the onions crosswise into very thin slices and separate the rings from each other. Dip these rings into the batter given below, place the dipped onions in a frying basket, keeping the rings well separated, drain thoroughly, and fry in deep fat at 400 degrees Fahrenheit until crisp and browned. Drain on soft paper, salt if necessary, and serve.

### Thin Fritter Batter.

1 cup milk 1 or 2 eggs 1 cup flour 1/2 teaspoon salt

Beat salt and eggs well together, adding the flour and milk gradually and continuing to beat. This is a popover batter, and should be of the consistency of cream. The amount given should be sufficient for frying from one to two pounds of onions of me dium size.

### Fruits and Vegetables

Prevent Liver Troubles

Spinach, onions, rhubarb and other foods are sometimes said to be especially good for the liver, because they will "stir it up." It is a common belief that many ills are due to a sluggish liver and that these ills can be overcome by eating certain foods. The apparent beneficial effect of these foods is probably due to the fact that they are mildly laxative, and nutrition spe clalists new believe that many of the ills ascribed to a disordered liver are really due to intestinal disturbances. Most of these ills would be avoided if particularly addicted. The nickels the diet were well chosen and if vagiven to children for concentrated rious health habits were established sweets might better be thrown away; which would do away with constipation. The United States Department tion and good teeth. That child is of Agriculture has published much infortunate who has been brought up to formation on the rational diet and how enjoy without question a glass of milk to choose it. Such facts can be found. for example, in Farmers' Bulletin 1313, entitled "Good Proportions in the Diet," which describes the five food groups, and recommends that the diet include some food from each group every day, the proportion indicated. When vegetables and fruits occupy an important place in the diet, many of he supposed liver troubles disappear.

# Firestone

# Double the Mileage at Half the Cost

Only a few years ago a 32 x 4 cord tire listed over \$50.00. Today, you can buy the highest quality 32 x 4 tire—a Firestone Gum-Dipped Cord—for about \$26.00.

Last spring crude rubber cost tire makers around 40 cents a pound. Today, it is over 90 cents a pound.

It was not so long ago that 7,500 miles represented the average life of a cord tire, while today, 15,000 miles—and more—is only the usual performance for a Firestone Gum-Dipped Cord.

Due to large, concentrated production, specialized machinery and simplified factory methods, together with economical distribution, Firestone is able to keep tire prices low—no matter where the price of crude rubber goes.

And, because of special Firestone processes, chief among which is Gum-Dipping, motorists are today getting thousands of extra

miles by using Gum-Dipped Cords.

Gum-Dipping is an exclusive method used by Firestone. It is an extra process, carried out in special Gum-Dipping plants, after which the cords are put through the usual calendering machines. Gum-Dipping insulates and impregnates every fiber of every cord with rubber, and practically eliminates internal friction and heat, and builds strength and endurance into the tire.

In the day-in and day-out service of taxicabs, buses and trucks—on the cars of hundreds of thousands of motorists everywhere—Gum-Dipped Cords are giving unheard-of mileage, dependability and satisfaction.

Get ready for the coming months of slippery pavements and bad roads. Assure yourself of greater safety, comfort and economy by equipping now with Firestone Full-Size Gum-Dipped Balloons.

### Had Lost All Hope of Ever Being Well

Read story of the fight for health and final victory as told by Mrs. James A. Hall, Box 31, Norris City, Illinois,

"About twelve years ago my health failed. I could not eat anything without suffering. I had heartburn, sour stomach, palpitation of the heart, smothering spells, pains in my back and sides and a cough almost like consumption. Nothing helped me. I grew worse and was able to sit up only part of the time. I had lost all hope of ever being any better when someone gave me a Pe-ru-na book. The book described my case so truly that I began to take Pe-ru-na. After two and a half bottles I could eat without suffering and improved from then on. I took eight bottles and felt like a new person. That was fourteen years ago. So many diseases are due to catarrh that I think Pe-ru-na the greatest family medicine in the world."

For more than half a century Pe-ru-na has been doing just such

Send 4 cents postage to the PE-RU-NA COMPANY, Columbus, Ohio, for a booklet on catarrh.

### Increase Dairy Industry Slowly

Mistake to Suppose It Will Continue to Expand Indefinitely.

(Prepared by the United States Department of Agriculture.)

Although through long periods the dairy industry of the United States will probably be on an importing rather than an exporting basis, there are likely to be wide variations in production from year to year, as a result of which the industry will find itself swinging back and forth from the import basis unless great care is taken to bring about orderly production, Dr. Henry C. Taylor, chief of the bureau States Department of Agriculture, declared recently in an address before a dairy trade conference at the University of Pennsylvania. The annual farm value of our dairy products, he said. has reached the enormous figure of \$2,500,000,000. He declared it is a mistake to suppose, in view of the growth made by the dairy industry in the last 75 years, that it will continue to expand indefinitely.

Aim of Dairy Industry.

Regulated production mainly for the domestic market, rather than unlimited expansion, should be the aim of the dairy industry, Doctor Taylor suggested. He said there is a prospect of fair prices for dairy products, provided the industry is kept within bounds so that it remains normally on an import basis. A survey of the dairy situation in foreign countries, he delared, shows the importance of not attempting to expand the dairy industry of the United States with a view to competing in foreign countries. In support of this view Doctor Taylor cited recent rapid expansion of the dairy industry in Australia, New Zealand and Argen-

#### Regulate Competition.

Competition in the production of butter for European markets, Doctor Taylor said, is so keen that it is undesirable for the dairy farmers of the United States to produce a surplus for those markets. In adjusting their production to home needs, American dairymen, he said, should get into the habit of taking advantage of the Department of Agriculture's statistical service, whereby the supply of cows can be forecast several years in advance. Information is regularly gathered and published by the department which should facilitate an orderly development of the dairy industry, Doctor Taylor said. The ideal, he declared, should be to have the number of dairy cows increase neither too rapidly nor too slowly to meet consumers' requirements.

#### Much Loss of Fertility Elements of Manures

Agriculture sustains a very heavy annual loss in fertility because of the careless manner in which most barnyard manure is handled. Manure that is allowed to lie in the barnyard through the spring months and sometimes through most of the summer season loses fully one-half of its fertility elements. This should not be permitted, for if there is one thing our soil need it is more plant food and more or-

For 28 years the Ohio experiment station has been carrying on a test with a view of securing data on the loss of fertility in farm manures that are left exposed to weather conditions. In this test eight tons of manure were applied direct from the stables to oneyear-old sod ground once in four-year rotations during the month of January. The manure was then plowed under in the spring for corn. In another series of tests an equal weight of manure was taken from the stables at the same time, but was not spread on the fields at hauling time. On the contrary it was allowed to lie flat in piles until April and then applied to the land and plowed under at the same time that the manure scattered in January was turned under. Now, the average increase in the value of crops in favor of applying fresh manure in January was \$3.40 per acre per year during the 28-year period referred to. This test has, therefore, clearly shown that it does make a difference how manure is handled.

### Important That Chicken

House Be Disinfected

It is important that the chicken houses be properly cleaned and disinfected. In addition to the need, from a sanitary standpoint, the cleaning and disinfecting helps to destroy mites and other vermin. After the house is cleaned and disinfected whitewash is an important aid in helping to keep the house in a sanitary condition.

If the house is not particularly bad a small amount of disinfectant can be added to the whitewash and the two jobs done at the same time. If sick chickens have been in the houses it is best to disinfect first and add disinfectant to the whitewash in order to make a thorough job. An effective whitewash for this purpose is made as follows:

Slake a half peck of lime and dissolve it with twenty gallons of water. Add one pound of salt previously dissolved in water. To this mixture add two quarts of crude carbolic acid. This mixture may be applied with a spray or brush. If the mixture is properly put on it not only kills the mites but destroys the eggs and will make the house fresh and clean.

### Great Damage Done to Farm Machinery

Metal Will Wear Much Longer if Painted.

Few people realize the real damage done to farm machines by allowing

them to rust. Even though a machine is nearly all iron or steel it will wear much longer if kept painted and thus protected from rust, observes E. R. Gross, rural engineer at the New Jersey State College of Agriculture, New Brunswick.

Some think that rust does all its work in the places where it can be seen but this is far from the truth. Rust results from moisture and air. Where there is plenty of air the moisture dries and only a little rust reof agricultural economics of the United | sults. Hence it is in the crevices that rust works overtime. The large parts such as the levers and frame of a machine are not damaged much by rust but the small parts, such as catches, springs, nuts and bolts do suffer.

Paint is the best means of checking rust action. A painted bolt will hold longer and can be removed more easily than one allowed to rust. The machine should be cleaned of all dirt and rust before applying the paint, Any kind of paint will do, but it is much better to use an automobile paint or one adapted to iron work. Paint all except scouring parts and apply plenty of paint at joints, corners, crevices between parts, around bolt heads and nuts. Paint as you repair. This is the best time. It can then be done during the season when the machinery is not in use. Some machines may be painted every year, some need painting only once in five or six years.

### Protein Supplement Is of

Much Importance to Pigs A protein supplement means a feed which carries a high percentage of protein. Tankage and fish meal are the two feeds which are most commonly used as supplements to corn. The following recommendations, made by Prof. V. Starkey, chief of the animal husbandry division at Clemson the amount of the above supplements

receive either tankage or fish meal in winter. amounting to from 5 to 10 per cent of the concentrates which they are fed.

2. Pigs weighing less than 100 pounds and receiving a limited grain ration of corn (one-half full feed, or about 2 per cent of their body weight) and as a hanger-on at dog shows. on rape or rye pasture should receive a maximum of 5 per cent tankage or

3. Pigs weighing over 100 pounds the only doctor in a busy town. receiving a full grain ration of corn while on rape pasture should receive a maximum of 5 per cent of tankage or fish meal.

#### Pocket Gopher Thrives in the Alfalfa Fields

The pocket gopher thrives in alfaltinued burrowing are favorable, and side it in the shade, for lunch, two alfalfa roots make a most acceptable little figures came around the corner food for it. Gophers kill many alfalfa of the antique converted farmhouse plants by cutting the top roots.

The pocket gopher tunnels to find food. In spring and fall, the seasons of greatest activity, a single gopher frequently throws up several mounds in a day. Sometimes one gopher mounds between the time of last cutproduce 2,000 mounds per acre.

Damage by smothering can largely be avoided if the mounds are dragged down before spring growth begins This should be one of the earliest field operations next spring, followed with prisoning or trapping, to kill the ani mals as they show new activity. Treat. and treat again if necessary, in order to cause complete eradication.

If you are not familiar with the peison method, inquire of the nearest county agent or write to A. E. Oman, Kapsas State Agricultural college, Manhattan, Kan.

Breeding and feeding spell success with poultry; but to keep up the breed be sure of pedigrees.

Onions should be harvested when the tops have died down. Dry out the bulbs thoroughly before storing.

The number of cuttings which alfalfa will stand depends partially upon the kind of alfalfa seed used.

Since the old gray mare "ain't what likely colt coming along to take her Paddy." place.

The tractor has come to stay, but the draft horse will be here for a long time, because tractors cannot wholly replace him,

Next winter's fuel s' ould come from dead and down trees, and from trick dogs are mongrels. crooked trees and weed trees. Thus will the woodlot be improved.

cut along toward the full-bloom stage and old alfalfa about the same stage except for the first cutting, which should be about tenth-bloom stage for good average results

### Lore for Dog-Owners

By Albert Payson Terhune

THE HEART OF A MONGREL

ST as measles sweeps a whole | kind of dog that lasted longest and school, so the dog-craze smote the commuter settlement at Paignton. Within six months, twelve families, on Vine street alone, had acquired dogs. And almost no two of the dogs were of the same breed.

Then it was that Old Man Negley came to the fore.

Old Man Negley had not the good luck to live on Vine street with its deep yards and broad lawns. He lived college, may be helpful in determining in a shack, down on River street; he and his smiling fat wife and their three dogs. But he was a daily visitor 1. Pigs weighing less than 100 to Vine street; where he cut lawns pounds when fed a full grain ration and made gardens in summer and of corn on rape or rye pastures should shoveled snow and made furnace fires

> Hitherto, the old chap had had no special claim to distinction, besides being a good workman. But now it was discovered in some way that he had spent many years as a kennelman

Wherefore, the new dog-craze on Vine street made his advice and opinion as much in demand as those of

For the dog-owners were finding that it is one thing to buy a pup; and quite another thing to understand him or how to care for him. Commuters fell to waylaying Old Man Negley for information and to ask him innumerable questions.

One noon, as Old Man Negley parked his lawnmower in the lee of fa fields because conditions for con- the Crothers' porch and sat down beand bore down upon him.

> One was a twelve-year-old girl, Sibyl Crothers. The other was a nondescript little old yellowish-gray dog.

"Mr. Negley," said the child with trouble quivering in her sweet voice. throws up two to three hundred as she pointed to her beloved dog, "Maisie Burke says that Paddy, here ting of alfalfa and the freeze-up in is a mutt. He isn't, is he? You know December. Ten or more gophers can all about dogs. He isn't a mutt, is he?"

> "No," returned the old man, gravely, as he proffered the disreputable little dog a sliver of corned beef from his first sandwich. "No, indeed. Paddy isn't a mutt. The blood of the finest champions in the dog-world is flowing in Paddy's veins."

"Really?" exclaimed the delighted child. "Champions of what breed, Mr.

"All breeds," responded Old Man Negley.

Sibyl's face flushed. She passed a protecting arm about Paddy; and glared defiance at the old man.

"I don't care!" she flashed. "He's was a puppy and when I was only just big enough to walk. And he's been my chum ever since. And now these other girls with their new-fangled of it. thoroughbred dogs are turning up

you'd make fun of -"

"Hold on!" begged the old man. 'Hold on there, Missy. I meant what grandest breeds on earth is in every mongrel. That is why a mongrel is the healthiest and strongest and smartest and often the prettiest dog she used to be" there should be a alive. I wasn't making small of

Sibyl eyed him, doubtfully. He went

"Did you ever go to a trained animal act? I hope you didn't; because nine times out of ten they are the result of more cruelty than I like to think about. But if you did, you'll have noticed every time that the best

"Do you know why that is? It's because a mongrel learns twice as quickly as the thoroughbred and because New standing of alfalfa should be he is healthy enough to stand work and hardships that'd kill any pedigreed pup. "Back in France and Flanders, they

used all sorts of dogs for couriers and for such like. Do you know the different in pressure.

did the most heroic things and showed the most sense? Some say the collie. Some say the airedale. "But the British war office kept tabs.

And I happened to read a copy of the report at the town library once. It was the mongrel that did best service at the front. He was the dog that had all the best traits of all the other breeds. And that combination made him staunch and loyal and wise and brave.

"People get a pedigreed dog, for a big price; and they pay a fortune for him and they spend loads of time and money in training him and in humanizing him; to bring out all the very best in him. "People get a mongrel, for fifty cents

or for nothing. In this world we're apt to value a thing by the amount it costs us. So they don't bother to train a mongrel as they'd train a thoroughbred. "In spite of that, he often surprises

them by his cleverness. If they'd take half the time and trouble to train him as they train a pure bred he'd reward that time and trouble fifty times over. "Every now and then you hear about distemper epidemics killing hun-

dreds of costly dogs. About fifty per cent of the thoroughbreds that have distemper die of it. "Ever hear of a mongrel dying of distemper? No. And you never will.

They get it; and they crawl under the barn or mope around the house for a few days. Then they are well again. "If you've got the right kind of a mongrel and treat him right you've got one of the grandest dogs the Al-

mighty ever made. Don't be ashamed

of him. Be ashamed of yourself if

you haven't brought out all the best in "He's more anxious to learn than you are to teach him. He'll not only learn but he'll use his brain in an in-

dependent way, besides. "For instance, when I was a kid, we had a mongrel-a reg'lar 'yaller dog.' And we had a pure-bred terrier.

"One day I went for a tramp in the woods with both of them. I got stuck in a quicksand slough. They weren't big enough to pull me out. I hung onto a branch overhead, and wondered how long I could hang on before my strength went and the slough

would get me. "The terrier barked and danced around me, and tried to pull me out with his teeth. But he was too little.

"The mongrel didn't waste time like that. He grabbed my cap, that had fallen off, and home he galloped with t. lickety-split, to dad; and he laid the cap at dad's feet and he yanked at the dearest, wisest, best dog that ever | dad's trouser legs till he made him was. Daddy gave him to me when he | follow him to the slough, just in time to pull me free.

"That was brain, against just plain devotion. That was the true mongrel

"Now, the next time some kid sneers their noses at him! But I didn't think at you for loving Paddy and for be-

ing proud of him, you say to her: "'Your dog has only one breed. Mine has a dozen. And every one of I said. The blood of some of the that dozen is every bit as good as . Have some your dog's one.' your dog's one.' .
more meat, Paddy?"

### Temperature Variation Gives Rise to Breeze

When air becomes warm it expands, gets lighter, and rises, while fresh, colder air blows in and takes its place. That is why there is usually a breeze at the seaside.

The land grows warm in the sunshine, while the sea remains practical ly cool, so there is generally a flow of cooler air from the sea taking the place of the warm air rising from the

land. These differences of temperature occur all over the world. Big areas of land and water become unequally hot and make the layers of air above them unequal in temperature, and therefore

HAT GOOD OLD PINE TAR SOAP

For 56 years the standard remedy for Chills, Fever and Ague, Dengue and other fevers has been wintersmith's Chill Tonic. Taken at the first sign of these troubles, it wards them off. Fine to take after almost any illness; its tonic effect is always good. Atyour drug store; popular size, 60c; mammoth size big value, \$1.00.

## Prudence's Daughter

IN NEW YORK

SYNOPSIS-PART ONE-At & merry party in the studio apart-ment of Carter Blake, New York, Jerry (Geraldine) Harmer, Prudence's daughter, meets Duane Al-lerton, wealthy idler. He admires her tremendously and she likes him. But Allerton gets a bit exhilarated, with unfortunate results. Jerry, resenting his assumption of familresenting his assumption of familiarity, leaves the party abruptly, the story turns to Jerry's childhood and youth at her home in Des Moines. Only child of a wealthy father, when she is twenty she feels the call of 'Art and asks her parents to let her go to New York for study. With some missivings for study. With some misgivings they agree to her going. In New York Jerry makes her home with a Mrs. Delaney ("Mimi"), an actress, who, with Theresa, a painter, occupies the house. Jerry takes an immediate liking to Theresa, and the two seem likely to become fast

### CHAPTER III-Continued

She set herself briskly to unpacking her small bag, folding things neatly away in the small drawers of the chiffonier. The two photographs in their handsome frames, Prudence and Jerrold, she placed conspicuously on the dressing table. And then she suddenly took up the picture of her mother, and looked at it intently, questioningly, almost passionately. She shook her head at last with sharp impatience, and placed it opposite that of her father once more.

"I don't get you, Prudence," she said.

In her intense moments, Jerry re ferred to her mother always as "Prudence," using the word not so much as a name, but rather as a statement of principle, a code of worship, a creed of religion. When she said, as she did very often, "I do not get you, Prudence," she meant only that Prudence was a depth of philosophy she could not fathom. It irritated her. If Prudence had been a scintillatingly brilliant, intellectual woman, Jerry felt she would not have minded her inabillity to reach the innermost recesses of her mother's thought. Prudence was no such thing, Jerry knew it.

After her unpacking, sweetened and refreshed with a perfumed bath in her tiny tub, she ran up the dark stairway to the third floor, turned back and tapped softly upon the door.

"Oh, d-n!" she heard, muttered flercely, from within the room. And then apologetically Theresa called, "I spilled the ink! Come in, Miss Harmer, I can't get up for a minute. The place is a mess. I've just had a scrap with Mimi, and I'm a wreck. She wanted to clean up before you came, and I wouldn't let her, and we are

oth to us." Theresa was down on her knees briskly mopping up the ink with a fresh towel. Jerry stood in the doorway, and looked about the room with eager girlish interest. If her studio downstairs appeared small to her, this one she thought quite unendurably so. There was no rug on the floor, nor curtain at the window. The couch was a tumbled mass of blankets and wrinkled sheets with a box of paints and half a dozen magazines thrown upon it. The teacup was on the floor, its contents untasted. And there was a big easel turned to catch the best light. Theresa, just getting to her feet again, looked with amused eyes upon Jerry's frank inspection.

"Do-do you-" "Uh," Theresa nodded. "Sleep here, work here, eat here-die here, too, I fancy. Haven't made my bed in heaven knows when. Mimi used to come in to do it for me, and bothered me to death, so I keep the door locked on her now. If you hear her pounding to get in, and me shouting for her to go away and mind her own business, don't be alarmed. It's a frequent occurrence. The place is a mess, Miss Harmer. I am almost ashamed of it myself."

She swept magazines, books and paints from a small straight chair and shoved it hospitably toward Jerry.

"Cigarette?" "No. thanks."

in a corner and tugging at the cigarette with a deep breath, almost gulping. She pulled off her smock.

"Excuse me a minute, and I'll wash my hands." As she washed, and then ly into the background. brushed back her dark tousled hair, which she did not take time to comb, but only fastened securely with additional pins, and scraped the paint from her skirt, she ran briskly on in the quick jerky fashion that Jerry found

had a real dinner in heaven knows when. I'm sure I'm hungry.'

She drew a small modish hat snugly about her ears, swept a wave of dark powder across her face, touched her lips with a bit of rouge and said she was ready. As they made their way carefully down the dark and winding stairs, Mimi's silken voice drifted out to them from behind a closed door.

"Oh, you bad boy, I believe you're

trying to make love to me!" Theresa laughed. "Little fool," she said. "Come in any time you like, day or night, you'll get a dose of that from Mimi. She runs them in relays, like the six-day bicycle race. Lord knows where she gets them-there don't seem so many men to spare."

Theresa took her to a small, quiet. basement room, where they had a generous, quiet, Italian dinner. They ate in silence. Theresa was hungry, very tired, and Jerry was stirred and breathless. There were others in the dining room, mostly girls, smartly dressed, all thin, all weary-eyed, all smoking.

"Don't you know them?" Jerry asked. "I thought every, one knew every one else-in the Village."

"I don't know anybody," said Theresa. "I used to be 'way up on the West side. I came down here to please Mimi. But I like it."

The days that followed were happy. dreamy, fascinating days for Jerry. Rhoda telephoned to her twice, with profuse and tender apologies for her deglect, and said she was coming to see her right away. But she did not come. Jerry spent a great deal of time with Theresa, but Theresa was always working, always tired to distraction. Mimi, although she continued as warm ly affable and friendly as at first, had little time or inclination for pretty young students of art beneath her roof. She slept until noon every day, had callers to tea every afternoon, and went out with some one every night in

Jerry made proper arrangements for her lessons, and was enrolled in one of the beginners' classes of Graves Mc-Dowell, who, having previously acquired a reputation, was now eking out a hard existence by instilling the rudiments of his profession into young aspirants. Jerry attended his classes with a nice regularity and promptitude, and patiently did her utmost to follow his instructions. He told her kindly that she was doing very well indeed, let her come and go as she liked, and paid as little attention to her as possible.

She bought an easel of the most elaborate design and arranged it prettily in her small studio, where it quite overshadowed the modest, plaything bits of furniture already there. And she painted a little every afternoon. pleasantly, comfortably, complacently, without any of the hectic excitement which throbbed about her

Even with all that, she seemed to have a great deal of time at her dis; posal. On the fifth day of her calendar desolation, she telephoned to her Aunt Connie's residence in Englewood, hoping to thrill the household with the news of her presence, and joyously anticipating a merry week-end in the lovely suburb with a tender aunt, a friendly uncle, and two frolicsome young cousins. She was greeted with the cold information that the entire family had gone to Europe on a hasty business trip, and the maid left in charge of the house did not know when they planned to return. Jerry felt quite saddened and abused. She was sorry she had not sent word in advance of her coming. She was sure Aunt Connie would have waited for her, would have postponed any kind of a business trip to Europe for the sake of being an oasis in the desert for "Prudence's baby."

Left entirely to her own resources, she managed as best she could, reading a great deal, riding solemnly about town on the busses, visiting the shops, It was the climax of her loneliness when she went to the movies, alone. Theresa lit one for herself nervously, Finally, on a happy thought suggested tossing the burned match on the floor by a timely advertisement, she rented a small plane and paid a fabulous sum to have it raised to the studio, where she gave it practically her entire floor space, shoving the easel ignominious-

Jerry was fond of music. She played the plano extremely well, and sang also with real feeling and much sweetness. She was beginning to wonder if perhaps she should not have chosen music in preference to painting as a career. There seemed to be so much "I don't usually work like this. I'm drudgery about art, a thing she had

Then, one afternoon, quite without warning, Rhoda La Faye ran in, caught along-for a meal ticket-while I'm her in both arms and kissed her a trying to turn out something decent at dozen times with fervent protestations the same time. Heaven knows I eat of delight at seeing her. Rhoda was little enough-it shouldn't be hard to pale, with feverish spots of crimson burning in her cheeks.

> Devereaux says it is very good." While she talked, she rummaged

arelessly through the boxes and drawers of Jerry's dressing-table, fishing out gloves and hats and veils, hurrying ferry, and almost at once they were running downstairs together, laughing, hand in hand. Jerry's drooping spirits were souring to the sky once more.

found Rhoda's immaculate to the very

point of spotlessness. "Oh, how tidy you are!" she cried, frankly amazed and bewildered by the speckless orderliness of it.

Rhoda laughed. "Oh, I am a perfect old maid. I know it, everyone says so. How Theresa can find her easel in that messy place of hers, I can't imagine. I couldn't work in such a chaos. I never pretend to touch a brush or a pencil until everything is apple-ple perfection. Coffee cup on the table, hair pin on the floor, handkerchief on the mantel-can't do a thing, I get the willies right away. Look, Angel-face, do you like the picture?"

She turned the easel about for Jerry to see the picture over which she had sweated her heart's blood. Jerry stood before it, awed, admiring. A curious thing it was, a narrow bit of-city street, showing gray and grimy between high gray and grimy walls, with just two bits of flaming color-an inch of blue sky between two grays, and a scarlet geranium showing bravely in a sixth-story window.

"I-I think it is wonderful, Rhoda. It makes me feel-sorry, like crying. Does-it somehow make you think of

Rhoda laughed gaily. "It does not! Anything but!"

"Yes, but you never met my mother, did you?" Jerry asked, surprisingly. and Rhoda did not understand. The picture was New York, plain and unvarnished, and Jerry was lonely for Prudence.

"They say it really is good. Thank God it's finished! It's a competition you know-a year's scholarship, travel in Europe, everything! I wonder if Theresa is trying for it? Has she shown you her pictures, Jerry?"

"Nothing-not a thing," said Jerry. "She never asks me so much as to look at the easel when she is working."

"Perhaps she thinks you aren't interested. Ask her. She won't mind showing you. She has three or four exquisite things-not finished. She works on a dozen at once, as the mood strikes her. I can't do that-one thing at a time for me-and I eat it, and drink it, and breathe it, and sleep it, until it's over. That's why I'm such a

While she was preparing a dainty supper on her electric grill, with which she could really work culinary

While She Was Preparing a Dainty Supper on Her Electric Grill, She Explained the Frenzied System of Art She Was Obliged to Pursue.

wonders, she explained the frenzled system of Art she was obliged to

"You can't make a living at real Art until you're old, and withered, and haven't any teeth," she declared. "I don't care how good you are, you can't make a decent living! Gee, you're lucky, Jerry, that you're not obliged to earn your bread and butter. You can pursue Art for its own sake, and that's all the fun there is in it. Otherwise. it's just grind, grind, grind, like digging ditches, or mining coal, or scrubbing floors. Well, anyhow, I'm one of the grinders. Haven't a cent but what I earn. So I peg along with Illustrations, advertising, anything I can get on the side. And when I have enough to pay the rent in advance a few weeks, I jump into something like this, head over heels, trying to attach a few leaves to my wreath of laurel while I have a little bair to wear it She gave her brisk bobbed head a defiant toss as she spoke.

After their supper, deliciously cooked, charmingly served, they went uptown to a theater, and after a sandwich and hot chocolate at a corner drug store, returned home, luxuriously. like the plutocrat she insisted Jerry

was, in a taxicab. Jerry felt much better. For the first time, she was quite pleased with herseif. She was glad she did pot take Art with killing seriousness, as Theresa and Rhoda did. Why, those girls sat up, man, times, night after night, until two and three o'clock in the morning, painting passionately away as striking contrast to the confusing though their very lives depended on it. dines of Theresa's studie, Jerry There was no sense in such macdenia;

immoderation. Jerry was grateful for her mental balance, her artistic equilibrium. Pictures were all very well, of course, but Jerry thanked heaven that she had been spared a passion that would surely be productive of weary, dark-circled eyes, twitching, nervous lips, and twisting nervous fingers!

She said something of that sort to Theresa one night. It was a night when Theresa, staggering away from her easei, had stumbled, fallen halffainting to the floor. Mimi had pulled her up on the couch, given her a cup of the eternal tea, and then asked Jerry to sit with her a while, to keep her from working. Mimi herself had an engagement, and was just hurrying away.

When Jerry relieved herself of her opinion on art in general, Theresa looked at her somberly, with her great, dark, weary eyes.

"Didn't you ever sit up all night working over a thing you couldn't get just right?" she demanded. "Never," said Jerry comfortably.

"Didn't you ever forget to stop for your dinher when you were especially interested in something?"

"Certainly not. I just put the brush down, and have my dinner, and then come back to it afterward-or the next morning-or whenever I get around

"But sometimes you can't come back to it," objected Theresa. "You lose the feeling when you stop-you can't come back."

"You just imagine that," said Jerry pleasantly. "You shouldn't let yourself get so excited over things. You wear yourself all out for nothing. I can always come back to it when I am ready." And then she added, fairly, "Not, I must admit, that anything of mine is anything like yours or Rhoda's. Far from it! But I am only a beginner."

"That's what we all are," said Theresa wearily. "Just beginners. And so we shall be all our lives, until we die, and afterward, too, I fancy."

Jerry was beginning to feel a grewing impatience with both girls, their intensity, their passionate nervousness, their ardent eagerness. She found it a little tiresome. They were always going about, looking at pictures, each other's, or somebody else's, and then arguing desperately, for hours at a time, over tones, and colors, values. She found herself wishing there might come a time, just once, when they would sit down, deliberately, for tea, without hovering, poised on the edge of the chair, ready for flight at the first favorable moment.

Jerry thanked God for moderation with increasing fervor day by day. She attended her classes with nice regularity every morning, worked at her easel an hour or two every afternoon, and then she manicured her nails, had a cup of tea and a toasted muffin and went out for a bus ride.

She had been studying Art in New flying. York for over six weeks when Rhoda swept in on her late one afternoon with the happy announcement that they were going to a party.

"Carter Blake's studio, over Brooklyn," she explained gayly. "I haven't seen him in months. He just telephoned that he has signed a huge contract with International this very morning, and is having a wicked party to celebrate it. And he invited you, most particularly. He's a darling thing, zens. There were a few piano playand you'll adore him.'

Jerry was properly thrilled, properly

Now that Jerry has really got down to work, does she really like it? And what next?

(TO BE CONTINUED.)

Fifty-Fifty

It was pay day and the bookkeeper stood in the manager's office to claim extra pay for extra work.

"Mr. Grasp," he said, toying nervously with a piece of red tape, "during the last week I have been doing the work of the pay-roll clerk, who has been ill."

"Well," retorted Mr. Grasp, "what

"Why, this being pay day, sir," said the bookkeeper, "I thought it might be right to mention it."

"Quite right," said the manager. "Let me see, your salary is \$40 and the pay-roll clerk's is \$20."

"Yes, sir," replied the bookkeeper, eaming expectantly. "Then," computed the manager,

working half the week for yourself entitles you to \$20 and half the week for the pay-roll clerk entitles you to \$10. Here it is."

American Colony American Samoa, comprising the

islands of Tutila. Aunuu and others, has an area of 57.9 square miles; population of 8,324, including 266 Americans. The capital is Page Pago on the island of Tutila. This own is the most valuable harbor in the South Pacific. It was ceded in 1872 by the native king to the United States as a naval and coaling station. American Samon is 4,160 thiles from San Francisco. The natives are Christype of the Polynesian race. All of the land of the islands is privately owned. The chief product is coco nuts. Fruits are also grown, but not

### THE PASSING DAY

WILL H. MAYES Former Dean Department of Journalism University of Texas

Texas Youth in School.

Reports from all over Texas are that there is everywhere an increased attendance in the schools. Most of the colleges and universities have an increase of from 10 to 20 per cent over last year's at-

tendance. This shows that both parents and children in Texas are awakened to the value of an education. Thousands of parents are making great sacrifices in order that their children may be equipped for better living and better service, and scores of organizations of many kinds are rendering assistance to students who might otherwise have to stay out of Say what we will about the frivolity of youth, we must confess that the young people of today are getting a better education than their parents have, and there is every indication that this generation will go far ahead of the last in attainments of every kind. Texas seems deter mined not to stay behind.

#### Better Roads in Texas.

From all sections of Texas the newsbapers bring reports of increased interest in road building. A session of the State Highway Commission at Austin now draws nearly as many people as a legislative session. These are petitioners for State aid, highway contractors, and politicians who are thought to have some sort of a "pull." Immense sums are being invested in roads, and counties are figuring in terms of million dollar bonds that a few years ago would have been frightened at a \$100,000 bond issue.

There is one danger, and only one, in all this good roads movement. Officials and people alike may become extravagant and wasteful. There are already rumors afloat that there is much waste and that Texas roads are costing too much money for the kind of roads that are being constructed. It is up to the people to see that they get full value for their investment in roads and up to the officials in charge of road building to protect the people.

#### Make Aviation Safe.

Colonel Mitchell, of the aviation service, stationed at San Antonio, has drawn to himself much commendation and criticism by his statements in regard to inefficiency in the aviation service. The people are largely in accord with him, and the officials in aviation say his charges are without foundation, and that Mitchell is just trying to get in the spotlight. Whether Colonel Mitchell is right or wrong in his charges, there is a feeling that there is much unnecessary loss of life in the aviation service, and it is hoped that his criticisms will result in improvement. Every parent who has had or has a son in the service is praying that Mitchell's complaints may se cure immediate action looking to safer

### Music a Part of Education.

When the parents of today were in school, music was regarded somewhat as a needless acquirement for children. There was a kind of regard for music, for people have always loved melody, but to study it in school was regarded as a waste of time. Those who gave their lives to it were classed, along with poets, as somewhat queer and freakish-hardly responsible citiers everywhere, a few fiddlers, a few song leaders, but most people did not think it worth while to study music beyond a few lessons at a "night singing school," and these were largely excuses for the boys and girls to get together in a common meeting place. Music has come into its own, and is a recognized study in the public schools. Children without love for music are the ones now classed as "queer." Every school that can afford it-and most of them can-now employs its music teacher, who is an important member of the faculty.

Comal River to Furnish Power. Five dams are to be constructed along the Comal river from New Braunfels to a point five miles below Seguin and the water will be used for turnishing power to industrial plants The time will come when all such streams in Texas will be used in manufacturing. In a few years more Texas will become as noted for manufac turing as it now is for agriculture and stock raising, but that will be after and to conserve it. Texas comes to appreciate its water

Texas Technological College.

The Technological College at Lubbook has started with a splendid attendance of students, largely from that part of the State. In time it should become a great school, and if it is made a technological school in fact as well as in name, its influence upon the future of Texas will be immeasureably large. It has a splendid op-portunity for leading in the movement to make Texas the greatest textile manufacturing State in the Union. Paper Issues County History.

The Wellington Leader has set a good example for other papers by issuing a history of Collingsworth county, a neat book of over 200 pages. Texas needs to know more of its nistory, and the Leader has set a good example that other newspapers should follow. The local paper is in better position than any other agency to

gather and print local history. Should this be done in every county, much historical information would be brought to light. The writer thanks the Leader for a copy of this valuable county history and is glad to pass the ea along to other papers.

### MOTHER!

Child's Harmless Laxative is "California Fig Syrup"

Even if cross, feverish, bilious, constipated or full of cold, children love the pleasant taste of "California Fig Syrup." A teaspoonful never fails to gently clean the liver and bowels and sweeten the stomach.

Ask your druggist for genuine "Callfornia Fig Syrup" which has directions for babies and children of all ages printed on bottle. Mother! You must say "California" or you may get an imitation fig syrup.

### Child Adoption

America leads the world in the liberality of her adoption laws. Under French and German law, only those may adopt who are over fifty years of age, and at the time of adoption have neither children nor legitimate descendants. England has no law by which one may adopt a child. In America, any decent man or woman capable of giving proper care to a dependent child may bind a child to them by legal ties as strong as those of

blood. There are in the United States today 138,000 children in orphan asylums and allied institutions. There are 210,000 dependent children altogether in the United States today .-Mrs. Honore Willsie Morrow, in Hearst's International-Cosmopolitan,

#### State Convention of Commisioners Held in Anarillo

It was the consensus opinion hat a mistake had been made for road construction, and we deals. believe that such will be ractified at the next session of the Legislature. The automobile and gasnline tax came in for discussion and most of the representatives were in favor of the eounties retaining all the automobile tax, and turning the gasoline tax over to the Highway Commission for the constuction and maintenance of the 7 per cent system on Highways.

Hon. Joe Burkett, Highway Commissioner, made an interesting and instructive talk. Chairgood looks. And real man Frank V. Lannham of the clothes value is what the Highway Commission defended the Commission against an attact by L. W. Kemp. Mr. Lannham advocated counties bidding on In CHURCHILL tailoring the maintenance of designated you will find the goods, highways through the counties.
