ERADICATE SCRUBS TO IMPROVE HERDS

(Prepared by the United States Department of Agriculture.)

"Scrub-bull eradication campaigns" are rapidly gaining the favor of enterprising county agents as a means of improving the cattle of their counties, says the United States Department of Agriculture. Fifteen dairy bulls of quality were added recently to the bovine population of Hopkins county, Ky. Prior to the campaign in this county two committeemen from each community made a survey of their school district to determine the number of bulls, cows, and heifers on the farms, what breed they were, and whether scrub or pure bred. The survey covered 850 farms and showed a dairy cattle population of 1,924 mature grade cows, 536 grade heifers, 101 mature pure-bred cows, and 31 pure-bred heifers; also that more than 80 per cent of the farm herds were being bred to scrub or grade bulls, and only about 19 per cent to purebred bulls.

For the organization meeting the Hopkins county farm bureau arranged a banquet for the community committeeman and business men. One hundred and fourteen attended. An executive committee of five men was selected. During the week of the campaign 30 meetings were held in all sections of the county with a total attendance of 1,632, averaging about fifty-four persons at each meeting. The bulls were selected by the purchasing committee in Christian and Todd counties, Ky., and brought to a local garage for exhibition and sale during the campaign. Fifteen bulls were sold by the end of the week. The majority of the bulls purchased were from dams with advanced registry records. The stimulating influence for better bulls never ends with the close of the campaign week. In Buncombe county, N. C., where a similar campaign was conducted early last fall, at which time 12 bulls were placed during the week of the campaign, the county agent reports a total of 29 bulls being placed, 17 after the close of the campaign.

A campaign was also held in Chester county, S. C., where 16 bulls were placed during the week. The county agent reports that he has several more. prospects for pure-bred bulls, also that a number of communities have pledged themselves to eliminate the scrub bull

Need Uniformity in States' Rules Poultry Industry Retarded

by Great Difference in Regulations.

(Prepared by the United States Department of Agriculture.) The poultry-breeding industry of the

United States is making a determined effort to bring harmony out of the confusion that now exists because of the differences in the rules and regulations applied to certification and accreditation of flocks in the various states. Under present conditions when a prospective purchaser of hatching eggs, baby chicks, or breeding stock comes across the word "accredited" or "certified" in connection with the advertised flocks, he does not know just what factors were taken into consideration to certify or accredit these flocks, unless he is familiar with the regulations governing such work in each state. The great difference in methods, plans, and rules governing the accreditation and certification of poultry in the different states is serving to retard the progressive development of the industry and in unfairly shielding some breeders whose flocks are certified under less stringent rules than others.

Difference in Regulations.

At present there are 22 states which have adopted regulations for certification and accreditation of flocks. The difference that exists between the regulations in these states is seen in the case of baby chicks. In one state chicks are sold by grade based on the production of the parents; in another case two grades of chicks are offered, one grade being from accredited flocks that are not tested for bacillary white diarrhea, and the, other grade from flocks that have been tested and are found free from the disease. In another state chicks are sold on a basis of four grades according to the grading of the adult birds, and the grading of the adult birds is based on their general qualities. Still another sells certified as well as two other grades of chicks, the certified chick being produced from certified males mated to certified females, while of the other two grades the first are chicks produced from old hens mated to certified cockerels, and the second grade are chicks produced from certified pullets mated to certified cockerels.

Committee Makes a Survey.

The general committee appointed to co-operate with the poultry office of the United States Department of Agriculture has made a survey in which this same degree of difference in state rules and regulations was found to exist in regard to hatching eggs and breeding stock as well as baby chicks. The committee is of the opinion that if the states can get together to discuss these differences much can be done to stabilize the poultry-breeding industry. Also, from the standpoint of interstate commerce in hatching eggs, bacy chicks, and breeding stock, the committee feels poultrymen are torreiten is business, not be carried to full perfection.

No New Material Found to Supersede It.

Oldest of Paints

Though whitewash is one of the oldest paints used in American agriculture for the interiors of barns and other buildings, no new material has

Whitewash Still Is

ever threatened to supersede it. "This is largely because whitewash is cheap, easy to prepare, and has undergone a process of improvement," says E. R. Gross, rural engineer, New Jersey College of Agriculture. Whitewash cleans and disinfects in addition to giving buildings a wholesome, pleasing appearance.

Quicklime is still the basic substance used in making whitewash, but years of experience have resulted in a formula that includes a few cheap substances which greatly improve the disinfecting qualities and durability of the mixture. What is commonly known as the government formula is excellent:

Half bushel (31 lbs.) of quick-lime or ump lime slaked in 7 gallons of hot water.

One peck (15 lbs.) of salt dissolved n 4 gallons of hot water. Three pounds of ground rice boiled

And the points of ground net bound one pound of clear glue dissolved in one gallon of warm water. Half pound of Spanish whiting dis-solved with the glue.

The lime is slaked in a barrel or

tub. The salt water is then added, followed by the glue and whiting mixture and, finally, the rice paste. The entire batch requires thorough stirring. Twelve ounces of alum added to this mixture acts as a hardener and makes it stick better. To increase the gloss two or three bars of laundry soap may be added. There is an advantage in applying whitewash while it is hot. Care should be taken not to apply it too thick, as it will then crack and scale.

Hill Selection of Seed

Potatoes Is Satisfactory A large number of pairs of plants from similar halves of the same seed tubers were grown under as nearly the same conditions as possible and were compared for yield at the Geneva experiment station. Wide differences were found in the yields, ranging from nothing to 141.8 per cent of the average yield of the two plants of the pair, with an average difference of 23.4 per cent. This rather unexpected result is said to indicate that there are probably important factors affecting the yield of potatoes which are unknown or which are not now fully appreciated. An unequal number of stalks per plant is known to have been an important cause of the differences in yield noted in the station experi-

ments. It is believed that these wide differences in yield of plants from halves of the same seed tuber which would ordinarily be expected to be quite uniform, show that the improvement of potatoes by the hill selection method can-

The usual farm practice of selecting seed potatoes from a best vielding

Vegetable Garden Often Becomes Unsightly

Fight Weeds for

Weed Patch Rather Than Productive Spot.

It is too often the common fate of the summer garden in North Carolina to become an unsightly weed patch rather than a productive spot adding to the health and income of the family.

"We should not allow this to occur," says Glenn O. Randall, extension horticulturist for the North Carolina State College of Agriculture. "Fresh vegetables form a rich and cheap source of those protective foods so badly needed in the daily diet. These foods are needed just as badly in the hot weather of mid-summer as in the vigorous days of early spring, and it is possible to have a continuous supply of succulent vegetables during hot weather."

Shallow Cultivation.

To do this, however, Mr. Randall suggests that the growing vegetables must be given shallow cultivation frequently enough to maintain a thin soil mulch and to kill weeds and grass. Then, too, the refuse from the spring vegetables must be cleaned out if disease was present or composted if free from disease and the space occupied by this refuse planted to a succession of vegetables.

Some crops that will withstand the hot weather are snap beans, lima beans, sweet corn, cabbage, tomatoes, New Zealand spinach and cucumbers. It is hardly possible to have a good supply of the salad crops or "greens," such as lettuce, as they will not thrive in hot weather; but New Zealand spinach will help to supply this need Late Cabbage Planting.

Mr. Randall states that it is now time to plant seed for the late crop of cabbage, such as the Succession and All-Season varieties. Plants for a late crop of tomatoes should also be set out, using, preferably, the wilt-resistant varieties.

"Remember," says Mr. Randall, "the consumption of green vegetables every day serves as a protection against sickness by aiding in maintaining the vitality through the hot weather of midsummer."

Making of Soft-Meated

Fowls Out of Cockerels The making of large, soft-meated fowls out of cockerels that ordinarily would be sold on the market as stags is the real reason for caponizing cockerels. Caponizing also tends slightly to increase the weight of the birds.

When birds are ten to twelve weeks old they are ready for caponizing, although it may be done earlier than this depending upon their weight. They may be caponized as soon as the sex can be distinguished easily.

After birds have been caponized they should be kept separate from the other fowls until the wounds are healed. No roosts should be provided, as the less flying and jumping they do the sooner the wound will heal. The yard into which apons are put should pro-en the call of the should and water, vide them with sheltent quiet. They

Experiments Show One Per Cent in Iowar Variety.

(Prepared by the United States Department of Agriculture.)

It has long been recognized that when two varieties of corn are grown in rows side by side a certain amount of natural crossing takes place. A row of white corn growing next to a row of yellow corn, for instance, will produce ears that have numerous yellow kernels. Also it has long been a general belief that the so-called close-fertilized cereals, like wheat, oats and barley, very rarely cross naturally; that is, a row of white oats, for instance, growing beside a row of black oats would produce white kernels only. Artificial methods of crossing the two kinds of oats were necessarily resorted to when plant breeders desired a cross. Seedsmen, therefore, have grown plats of one strain of oats next to plats of another strain, feeling assured that each seed plat would remain pure.

Such is not the case, however, according to the United States Department of Agriculture. Experimental work with oats at the Akron (Colo.) field station has shown that without doubt natural crosses do occur in oats the same as in corn, although to far less extent. The extent of natural crossing in oats varied with the different varieties. It was greater in some selections than others from the same variety. The greatest percentage of natural crosses was observed in the Iowar variety, in which an average of nearly 1 per cent of crosses was found. The natural crossing of oats is so small that it is of no particular significance to the average farmer even though he does grow his own seed oats. It is of importance, however, to the cereal investigator and nursery seed producers. The need for formulating better methods in plat and nursery technique in conducting experiments with oats is apparent if the factor of natural crossing is to be eliminated.

Minerals Assist Chicks in Building Framework

The science of feeding growing chicks has developed by leaps and bounds during the last few years. The discovery of vitamins and their relation to poultry feeding, the importance of clean yards and plenty of green feed have made the business of growing poultry more economically successful. During the last few years more attention has been centered upon the importance of a new element in the ration for growing chicks-minerals or inorganic material. Minerals supply three distinct functions in the chick's ration. They go to build bone, which is the framework of the future pullet or cockerel. A good skeleton is onehalf the battle, because on it must be attached the meat and in it must be carried the organs of reproduction, which produce the marketable product, the egg.

Minerals also have been found by scientific tests to aid materially in the digestion of other foods. Lastly, minerals have been found to exercise a

PROBLEMS OF WARM WEATHER FOR DAIRY

"Just a minute please." The manager of the powder plant stepped to the curb to hall one of his largest patrons, who was just driving away of . with a truck load of cans, most them full of rejected milk. In fact, this patron had been taking the most of his milk tack home with him for a week. He was in an exceedingly ugly frame of mind-as most of us would be under the same conditions "I am pretty sure that the troubic with that milking machine of your the manager told him. "How ! is it since you changed the sol' in your crock?" The patron ac ledged that he was using the sterilizing solution for the tubes of his milking machine : the manager had last visited t a month before. "There is you trouble," observed the ma. "Change your solution and keep . ing fresh chloride to it and I gue likely you will bring us the kind c milk that we can accept." The ma who uses a milking machine, and h name is now legion, has hot weathe troubles that his brother who milk by hand knows nothing about. The rubter tubes are ideal breeding places for undesirable bacteria unless the solutions in which they are kept between milkings are carefully watched. A good solution is recommended by the New York experiment station as follows: Mix the contents of a 12ounce can of chloride of lime with a gallon of water in a small crock. Add first enough of the water to make a paste and then the remainder. The clear solution remaining after the mixture has been stirred is the part to be used. Keep covered. One quart of this stock solution is added to a strong brine made by placing 50 pounds of salt in a 20-gallon crock filled with clean water to within six inches of the top. The tubes and teat cups are immersed in this solution between milkings. One pint of the stock solution should be added twice a week and the original level maintained in the large crock by the addition of water and salt as needed. If dirt gets in, the whole solution should be changed immediately. If not, the same solution may be used as long as it remains clean. This brine solution has proved superior to chloride of lime alone and has solved the problem of clean milk from a milking machine for many a farmer.

Production of Quality Cream Important Point

Proper washing and scalding. of cream separators after the milk is run through them reduces the bac-teria in the cream one-half and the keeping quality of the cream is greatly increased, according to the results of an experiment recently conducted by the dairy department at South Dakota State college.

With cream grading becoming a more common practice, the production of high-grade cream is one of the important points in successful dairying. Realizing this fact, the dairy department undertook to determine what effect the care and cleanliness of the separator had to do with the production of quality cream. Two separators were used in the experiment. One was washed and scalded after each separation while the other one was only rinsed. Cream separated 12 hours later in the separator that was only rinsed showed an average bacterial count of 10,800,000 per cubic centimeter. Cream from the same milk separated in the machine thoroughly washed and scalded, showed a bacterial count of only 5,-500,000 and the flavor and keeping quality was far better. The skim milk in these trials showed even a greater difference in the bacteria present. When the machine was not taken apart and washed for two separations, the bacterial content showed a greater increase.

nishes both calcium and phosphorus. Nine parts of either bone meal or ground rock phosphate and one part tankage for flavoring. These mixtures also furnish both calcium and phosphorus.

The most necessary elements which are furnished by all mineral mixtures are calcium, phosphates and chlorine. All of the above simple mixtures supply these elements.

Experimental data shows that hogs which have access to good, succulent pasture are benefited to a very slight degree by mineral mixtures. Also, bogs which are fed upon a ration of corn and tankage respond very little to mineral mixtures. However, there is a place for mineral mixtures where hogs are fed an unbalanced ration, es pecially in the dry lot.

Skim Milk Will Improve **Ration for Market Hogs**

Skim milk added to a ration of corn and tankage enabled the Ohio experiment station to market hogs weighing 255 pounds almost three weeks earlier than those fed on corn and tankage alone, at a saving of 78 cents a hundred weight on feed costs. The corn and tankage ration produced a gain of 0.9 pounds per pig daily with a ration of 3.61 pounds corn and 0.38 pounds of tankage. The cost per hundred pounds gain in this lot was 9.79.

The skim-milk-fed lot received a ration of 4.66 pounds of corn, 0.28 pound of tankage, and 2.95 pounds of skim milk daily. The average daily gain was 1.33 pounds daily at a cost of \$8.91 per hundred pounds gain. The saving on feed for each 100 pounds of skim milk fed was 30.6 pounds. The skim-milk-fed lot received a small amount of limestone in the ration, and this helped to increase the gain.

Eradicate Stomach Worms As a drench for the eradication of stomach worms in sheep, gasoline is the one most commonly used by flock rers in the United States. It given on three successive

all f and drink fter the dose sted for two Sach doe ately faror

With Corn in the Fall Starting sweet clover in corn at

time of last cultivation is a good practice provided it can be done. There is rarely a season, however, when sweet clover or any other of the clovers give a good stand when sown in corn at this time. If the season is very favorable, with considerable rainy weather, a stand is sometimes secured. As a rule, not much of this clover is alive the following spring, though sometimes it gets through the winter.

On some land it is much easier to get sweet clover started with corn than on other types of land. A soil may be poor for corn but rich for sweet clover, and on such land it is comparatively easy to get the clover started with corn; but on good corn land that will grow 50 bushels or more of corn, it does not pay to depend on getting sweet clover started in the cornfield.

Sheep Business Subject

to Market Fluctuations The sheep business, like all other industries, is subject to market fluctua tion, periods of low prices being followed by higher prices and lucrative returns. Since the last depression in 1922 sheep have been one of the most profitable classes of farm live stock. Many express the opinion, therefore, that after this year we will see lower prices. No doubt there will be considerable fluctuation in the market and dry weather may cause a sufficient liquidation to temporarily demoralize the market this fall. This should, if it develops, provide an excellent opporrunity to lay the foundation for a farm flock and at the same time should be an incentive to every man who is in the business to retain his flock if at all possible to do so.

Mineral Mixtures Help

There are on the market a number of commercial mineral mixtures which have recently been especially compounded for poultry feeding. It will probably be the easiest for the average poultryman to secure his minerals by purchasing them in this form. Be sure that you are getting a well-known mitture, and feed it strictly according its instructions. Most of these mineral hixtures contain, in addition to those mentioned above, other mineral elenents, such as sulphur, which unuttedly have a definite place.

ills should not be affected by these findings," says the experts. "as they are of interest primarily to the expert or to those attempting to develop improved strains of potatoes. Selecting seed potatoes from high-yielding hills has been thoroughly demonstrated as a satisfactory method for maintaining high yields."

Crown of Alfalfa Plants

Is Close to the Ground Young alfalfa plants have a sort of a crown close to the top of the ground. A horse or a sheep will bite off the young plants below the crown during the first fall and winter and kill the plants. Cattle do not crop so close to the ground but they do eat the tops that should be left there every winter for protection and to hold the snow. Alfalfa stays green under the snow all winter, not very green, but still there is some color near the ground on every crown. A few warm days and the green shows more and then it dies back slightly with the next cold snap. If the stock are even allowed to run over the alfalfa field when the weather is cold they will break off the tops of the plants and kill quite a percentage of all the plants they touch. Fence is cheaper than reseeding alfalfa.

Spray or dust potatoes; it pays.

Mow the pastures to destroy the weeds.

. . The only excuse for cultivating corn is to kill the weeds.

Be sure to plant plenty of soy beans for seed, hay and soil improvement.

Good paint will prevent a multitude of evils; bad paint will commit them. . . .

Remember that grass and weeds are easier to kill when young. Cultivate crops frequently.

It has been said that there is no gain without a loss. In other words, gain alfalfa and lose despair.

Profitable poultry production requires good housing, proper and suffi-cient feeding, proper care and management.

seem to be little inconvenienced by operation and water and soft feed

Birds to be caponized should be starved from 24 to 36 hours. Caponizing is not a difficult operation, but in order to secure the best results, an experienced operator should be employed.

Silo Supplies Roughage Needed on Dairy Farms

That the average dairy farmer is bound to be short of roughage this year is the general opinion of men in touch with the situation. To prevent this shortage, Iowa State college suggests that the silo offers one of the best ways of stretching out the hay supply.

"While silage will not entirely take the place of legume hays in the ration of the dairy cow," says John M. Shaw, of the dairy husbandry department, "experimental work has shown that it will save considerable hay and at the same time will reduce the cost of milk and butterfat production. "There is still time to build a sile.

and have it ready for filling this fall, and there is probably no more profitable investment which a dairyman can make."

Harvesting Broom Corn

Broom corn is ready to harvest when the seed is in the milk stage. It is customary to "table" the corn first, that is, tend the tops of the adjoining rows over so the heads lie in a horizontal position, crossing each other, just high enough to make cutting easler. When the heads with a foot or two of the stalk attached are removed they are piled, then hauled to a stripper or thresher, where the seed is removed. The brush is then cured and baled for sale.

Various Pastures for Feed

To determine the number of head of live stock that can be kept on one acre of various pastures, to leain the length of time that each pasture will afford a good quality of feed, to fr the relative gains made by the IV stock and to work out a rotation wi will include a pasture that will

. . . Tests show that scrub hogs require 26 per cent more feed than pure breds to make 100 pounds of gain.

Removing the harness at noon and washing the work horse's shoulder with cold water adds to his efficiency.

Silage and Alfalfa Hay

Splendid for Dairy Cow Silage and alfalfa hay form the basis of a splendid ration and cows will do fairly well on these feeds alone. To obtain the best results, however, some grain should be fed. Since there is plenty of oats and barley we would? suggest a mixture consisting of equal parts by weight of ground barley and ground oats, and then feed about one pound of this mixture for each three and one-half pounds of milk produced. Soy-bean hay is nearly equal to alfalfa for feeding the dairy cow. It is practically the same composition. The soy-bean hay is a little coarser, and on account of this the cows may waste a little more of it than they would of the alfalfa hay

CHAPTER XVIII

e Fighting Line at Last. nd Fair haunted the Selwood He hung to the side of the unus man almost hight and day. hat do you think, doctor?" he d anxiously of the medical man brought in from Bement.

"Frankly, I don't think," said that worthy, "these lapses, superinduced by concussion, are treacherous things. the Sky Line foreman. He may recover suddenly, or he may die without regaining consciousness. It's a gamble."

But anxious as he was to know the secret locked in the unconscious brain of Price Selwood, Fair had not been idle.

stopped wipin' it-" He and Bossick had been very busy. Many things had been done, a plan arranged, secret conclaves held at which grim and determined men sat he said to Nance, "you're just the pertheir horses and pledged themselves to do à certain thing.

Then Fair went to the cabin on so you may as well go along sensibly, Nameless, for the longing in his heart for we'll take you anyway." to see Nance Allison grew with every passing hour.

He held her in his arms and kissed said curtly, "for I'll not ride a step her forehead and her smooth cheeks, with anyone from Sky Line." touched the shining coronet of her hair with reverent hands. struck her heels to Buckskin's sides

"Sweetheart," he whispered, after the age-old fashion of lovers, "there Buckskin, stock, slow and faithful. was never a woman like you! You are my light in dark places, my rain in the desert. Oh, Nance, what if I had never found you !"

And the girl leaned on his heart in an ecstasy of love that was shot with sadness, holding fast to her trust with desperate hands.

"It's bound to come soon now," he told her, "we are organized and ready -only waiting for Selwood, poor fellow, to regain his reason that he may tell us where to strike."

"There'll be gun play and-blood," said Nance miserably, "and I pray God that you will not be taken. I-I couldn't lose you, Brand, and live. I wouldn't dare to live-for if they kill you-Oh, that black hatred which has stirred in me so long, is getting beyond my strength to hold it! I'll go mad and turn killer, Brand if they kill you! I know it-I feel it here-" she laid eloquent hands on her heart-"and then my soul will go into the pit of damnation."

"Buck up," scoffed the man playfully, "we'll all come through with colors flying and see this nest of vipers caged. Then think of life on Nameless, Nance-safe and happy, with our fields and our herds and peace in all the land. I shouldn't have suggested anything else. Come-be my brave girl again, my good fighter."

Obedient to his words, Nance raightened and tried to smile

from her sweated forehead, knelt on | above her narrowed eyes, one hand on the spring's lip and putting her face her hip. to the limpid water, draak long' and "If you've got anything to say to eagerly a foot from Buckskin's muzzle. me," she said coldly, "say it."

As she straightened up, wiping her Kate Cathrew leaped to her feet, but mouth with the back of her hand, she the man put out a hand and touched caught a sound where had been silence her.

before-the sound of scinething mov-As if a spring had been released she sank down, obeying that calm touch ing, the rattle of accoutrements, and turning quickly, still upon her knees, like an automaton.

"Miss-ah-Allison," said Arnold, she looked up into the grinning face of Sud Provine, the frowning one of "there is no need for dramatics. Neither will they avail you. We "By Jing!" said Provine wonderingwanted to see you-to talk business ly, "never havin' seen you outside that with you. So we sent for you." there ol' bonnet of yours I didn't know

"So I see," said Nance, "or rather how purty you was! Them eyes now you kidnaped me."

"Not so decided, please. We don't like such words. They are-ahcrude, I might say." "Not half so crude as you will find

the methods of Nameless when this gustedly. "shut up and mind the busigets out, I guess," said Nance. "Heavness entrusted to you. Miss Allison," en knows I don't amount to much, but son we wanted to see. We were sent I am likely to be a torch for a fire this morning to fetch you to Sky Line, that's smoldering."

"We have extinguishers," smiled Arnold. "Sky Line is a pretty fire department, if I do say it. The thing for you to do just now is-think. I'll give you ten minutes."

"I don't need them," said Nance. "I've thought for several years-about my father's death-my brother's crippled body-my missing cattle-- my burned stacks-and many other things. I'm thinking now about Sheriff Selwood-and Bossick's latest loss."

The man's face hardened, yet a reluctant admiration drew a slight smile across it.

"You take liberties, Miss Allison. Are you not-speaking in jest-a little-ah-afraid to speak so broadly?" Nance laughed bitterly, shifting her

feet in their worn boots. "Afraid? No-not of you-nor of your hired rustlers-nor Cattle Kate, there,, with her paint and her tempers. I'm not afraid of anything but

the wrath of God." At that Arnold laughed outright. "You have something yet to learn, I see. Very well, since you do not care to think I will outline briefly your situation. You know, of course, that you are at present in the power of Sky Line ranch. Reasoning backward you will come to the conclusion that there is a primal cause for this. Reasoning forward you will know that there is something which you can do for Sky Line, which it wants of you."

"Of course," said Nance, "the whole country knows that-my flats on the river."

Arnold frowned.

He did not like that answer. "And how, may I ask, does the country know this?"

"It knows what has happened to me for several years now-and it judges the faces of your riders and their boss." "If you please, we'll leave Miss

The man turned and struck a bei. which stood on a rosewood pedestal. Minnie Pine responded with suspicious promptness.

WNU Service

"Send me Provine and Big Basford," said Arnold briefly, and the girl departed.

The man did not speak again, nor did Nance.

There came a shuffle and rattle of spur and the two Sky Line riders stood in the doorway of the room beyond, having come through the kitchen. "Miss Allison," said Arnold, "I own

the men of Sky Line, how or why is unimportant. What I tell them to do they do. Am I not right, men?"

Provine nodded easily. Big Basford spoke sullenly.

"Yes, sir," he said. "All right. Now, my girl, consider. There is on Sky Line a secret place-" "I've always thought so," said Nance

decidedly. "Be quiet. A place which the whole of Nameless is not likely to find, so mysteriously is its entrance hidden. One could live there for a lifetime undiscovered-or be taken out as if

on wings-' "Like Bosswick's disappearing steers !"

Arnold was exasperated, but held his temper. "Exactly," he said, "if you will. Now consider again. You are a pretty fine specimen of a woman-quite

likely to appeal to men-especially to men long denied feminine companionship-like Basford there."

Nance flung a glance at Basford. His sullen, lowering face set in its thicket of beard with the red-rimmed eyes above was enough to chill the heart of any woman. The great apelike body added its own threat. Her own intrepid spirit felt a shock of horror, but that deep anger in her left little room for fear.

She seemed to hear again Brand Fair's exultant words: "You'll never leave the line, Nance, never in this world !" With a dogged courage heaving

through the anger she looked back at Arnold. "Well?" she said. "Big Basford hasn't had a woman

of his own for many moons, I know. Now-will you sign this deed-or will you go with Basford to Rainbow's pot -his blushing bride?"

Nance's breast was heaving. Great breaths dilated her lungs and whistled out again. Her hands were shut tight, the fingers on her hat brim crimping the weathered felt.

She thought of her mammy-of Bud -of their long labor and the hardships they had borne. She thought of the cabin on Nameless-of its white

A. & M. Short Course Draws Crowds.

The A. & M. short course for farmers this year drew what is ordinarily regarded as a large crowd -about 3,000 persons, at least threefourths of whom were boys and girls. If Texas farmers

only knew and properly appreciated the advantages of attending this course the crowds would be ten times as large. If there is a farmer in the State who can't get enough out of such a course to pay him for attending, he should quit farming and go at something else.

The only complaint this writer makes is that there are so many interesting and informative conferences going on all the time that one can't attend enough of them, and one small head can't hold all that is heard even at the few group gatherings a person can attend. There is no possible phase of farm work or farm life that is not discussed by experts who know exactly what they talk about.

The short course comes at a time when most farmers are not so busy but that they might "take out" long enough to spend a few days studying their business.

Making Farming a Business. The small number of adult farmers at the college indicates that too much of the farming in Texs is done in a hap-hazard way-that too little real study is put into it. Doubtless there were twenty times as many farmers off on auto excursions or camping on creek banks in Texas as were at the short course that week. They were just "killing time" and at as much expense to them as if they had been at the A. & M. College learning how to avoid the mistakes they

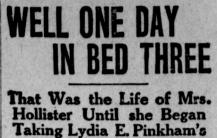

have been making. If that had been a business men's meeting and the business men could have closed their stores or could have gotten away without any great loss to them, there would have been great throngs of merchants there. The trouble is that too many farmers do not think seriously of farming as a business that can be improved.

Successful farming of today is as much ahead of the old-time farming of twenty-five years ago as the automobile is ahead of the ox-cart, but a great many farmers do not seem to know this.

. . .

Farm Women More Progressive. There were many more women than men at the short course and they seemed more intent in studying their problems. They told how they had improved their homes from kitchens to parlors, how they had made their work lighter, how they had made money without working in the fields day after day, how they were making life on the farm better for themselves and their families. There were always large groups at these gatherings where women's problems were discussed, and they showed an eagerness to learn

still better ways. Many of these women made sacri-

starlight.

"That's it," he said, "you're resilient Looked as willow wood--ready with a comeback. You'll never leave the line, sweetheart, never in this world !"

It was late in the night when Fair rode away.

He went south, going back to look again on the quiet face of Sheriff Selwood, then on to the Deep Heart fringes to meet Bossick and Jermyn.

As for Nance Allison, she was seized with a great restlessness that made inaction unbearable.

.

"I think I'll ride the lower slopes of Mystery, Mammy," she said next mornto make her lungs labor for sufficient ing, "and look for that black shoat air. Her usually smiling lips were set that's missing. I can't afford to lose it."

The mother looked at her with worried eyes.

"You take your pappy's gun," she said at last. "I feel to tell you so. Th' time has come.'

But the girl shook her head.

"I don't care," she said, "I can't trust myself of late." She kissed Sonny, ran a hand over Bud's bronze hair, and went out to the stable where she saddled Buckskin and rode away. In every likely place she looked and

listened for the black shoat, but it seemed to have disappeared from the face of the earth, like the six fat steers. She followed a small ravine for longer than she had intended, sat for a while in a sunny opening high along the breast of Mystery, and sidled back toward the west again.

And here it was that two men far above looked down and saw her with ejaculations of delight.

"Well, if this ain't luck !" said Provine grinning, "then I'm a liar! I thought this morning when Arnold country, but she catalogued him swifthanded us that last bunch of instruc- ity as the man from New York of whom tions that he was due for once to come all Nameless had heard. He was slim out th' little end of th' horn. I didn't and fair skinned, and the gray eyes, see how any human was goin' to be able to carry them out. I didn't think | arch of the high-bridged nose, were the we'd ever get near enough to get her and do it on th' q. t. But she's brought A fox she had once seen caught in a herself to us!"

"If she's armed," said Caldwell shoftly, "It's not time yet to crow. I think she'd fight.'

"Fight, h-1!" said the other, "she don't believe in fightin'. She's religious. We'll pick her up too easy an' present her to th' boss with our compliments."

An hour later Nance, riding along a dim trail made by the traveling hoofs of deer, came out above a spring in a pretty glade.

She was warm and thirsty, so she dismounted and pushing back her hat

the Cathrew out of this," said Arnold crisply. in a matter of two minutes Nance Alli-

"Yes?" asked Nance. "She's been the backbone of my troubles-under you, no doubt-and it isn't likely I'll leave her out. If you have anything to say to me I'd advise you to say it and get it over before Nameless comes hunting me."

"All Nameless may come hunting you, Miss Allison," returned the man, "but it will not find you. Now put your wits in order. Sky Line wants those flats on the river-and means to have them. We don't do things by halves. What we undertake we finish. The time has come for decisive action. You have had many-ahhints to vacate and have foolishly disregarded them. That is like a woman. A man would have gone long

ago.' "Not any man," interrupted Nance. "my pappy didn't."

"No?" said Arnold cruelly. "Is he Provine took Buckskin and Caldwell here?" motioned her to ascend the steps. With Quick tears misted the girl's eyes. her head up and her mouth tight shut but the slowly throbbing anger burned Nance Allison strode forward into the

them out. "Yes." she said promptly. "and always will be-at the foot of our mountain-and in Bud and me. He has not yet been conquered."

Arnold dropped his dead cigarette into a tall brass receptacle, rose and stepped into the other room. He picked something from the desk there and came back.

"We come to cases," he said sharply. "I have here a properly-made-out deed, conveying to Miss Cathrew for the consideration of one dollar, the quarter-section of land herein described. lying along Nameless river. owned by the widow of John Ailison. deceased, who took up said land under the homestead act. This paper needs only the name of John Allison's widow and two witnesses to make it a legal transfer of property. I am a notary. We can supply the witnesses -the highly important and necessary signature of John Allison's widow you will obligingly furnish-at a price." Nance swept off her hat and struck down against her knee. A laugh broke stiffly on her tallow-white face. "If I could swear," she said, "I'd tell you where to go, and what I thought you were. You may consider

yourself told as it is." Arnold became coldly grave. "You refuse?"

"What do you think I do? Put your She stood with her hat pulled down | wits in order!"

scrubbed floors-its homely comfortsand all it meant to them and to her. It was her pappy's dream of empireit had been hers. She thought of Brand Fair and of Sonny. Of Brand and Bud who would sure start the. fire to burning in all the lonely reaches at news of her disappearance-and-

"I'm as good as most men," she said. "to take care of myself. I wouldn't sign that paper to save you and all your rustler nest from eternal damnation! And that's my last word."

Arnold snapped his fingers. "Enough," he said, "we'll see what a night in Rainbow's pot will do for you. Basford-my compliments. I give you the beautiful lady. Properly dis-

ciplined she'll make you a fine wife." But Big Basford shook his unkempt head.

"She's a yellow woman," he said contemptuously, "I don't want her." and his hungry eyes went helplessly toward the dark splendor of Kate Cathrew in her velvet chair.

Provine surged forward, a sudder excitement in his snaky orbs.

"I do," he cried, "try me!" Arnold laughed.

"Good! I like an eager lover. You may guard Miss Allison inside, and Basford shall take the place I had intended for you outside the Flange. We'll talk business some more tomerrow. We bid you adieu, Miss Allison. hope by morning you will be more amenable to reason.

Without a backward glance Nance turned and strode away between her guards. Resistance was useless, she well knew.

"The hand of God," she said calmly, nor yours can do me harm for the Lord shall preserve me from all evil, He shall preserve my soul. And He did not make me strong for nothing," she added. "I shall leave it all to Him.'

(TO BE CONTINUED.)

Protection for Big Game

Sleeping sickness and matarial fever will perpetuate big game in Africa; the realization has been forced on hunters that they cannot defy microbes when they invade the haunts of the big mammals.

Enjoyment on Tour

Tony-"What sort of time is Frank having on his motor tour?" Jim-"Great! I've had two letters from him-one from a police station and the other from a hospital."-Good Hardware.

fices to attend the short course, but those who did so returned to their homes with new ideas and with brighter visions of farm life. They may be able to put a little of their "pep" into their stay-at-home husbands.

The Boys and Girls Were There. But the group that seemed to get most out of everything in sight and out of sight were the boys and girls, some 2,000 in number, most of whom were in charge of farm agents and home demonstration agents. They heard everything they could hear, asked questions, applauded the clever points of the talks, yelled at the good stories told, ate everything in sight, and had a time to be always remembered.

When the short course, then called the Farmers' Congress, was started some twenty-five years ago there were at least ten farmers present to every boy or girl. Now the figures are reversed., Possibly those in charge are learning that boys and girls can be taught more easily than their parents and that the success of farming in the future will depend on whether the young people are brought to know more about farming and to love farm life.

. . .

A criticism frequently heard during the short course was that the campus appeared to be deserted most of the time and that there was no music to enliven the crowd. While the programs were on in the many buildings the crowds were at the various meet ings, but at other times the place did seem dull. There was some group singing at times in the halls, but not a brass band or even a hand organ was in evidence.

A few good bands playing on the campus when there was nothing else 'is ever before my face. Neither you doing would have added much to the week's pleasure. And this starts a suggestion to the college authorities. Offer some prizes for the best country bands attending the short course, and watch the interest grow. Start the movement early enough to have the bands in good practice for next summer.

Insure Against This Loss Without Paying A Premium

When failure to receive materials is costing you money, service is of major importance.

Delays mean idle men, idle machinery-the job is held up. Both owner and contractor suffer loss.

Owning and operating two modern mills with a capacity of 9,000,000 sacks annually, the Texas Portland Cement Company is splendidly equipped to take care of the trade's requirements.

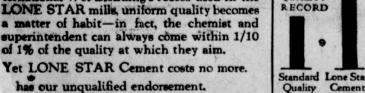

In addition, the mills' location on the network of railroads radiating from both Dallas and Houston assures delivery service that is unexcelled.

Along with this service, LONE STAR Cement offers quality that actually exceeds the requirements of the U.S. Standard

Specifications by over 50%. And with the International Wet-Blending Process used in the LONE STAR mills, uniform quality becomes a matter of habit-in fact, the chemist and superintendent can always come within 1/10 of 1% of the quality at which they aim.

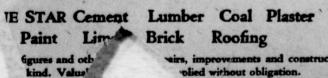

has our unqualified endorsement.

The Way of Authors

Doran, the publisher, George cracked a joke about authors at a farewell dinner that was given him in New York on the occasion of his departure for Europe.

"Authors," he said, "never think about money, and, every blessed book they write, they expect a royalty big enough to keep them from thinking about money for the rest of their borp days."

Lofty Plateau

Table mountain, Cape Town, South Africa, is a magnificent natural curiosity. It is nearly 4,000 feet in height and has a level top about three square miles in area.

Just say to your grocer Red Cross Ball Blue when buying bluing. You will be more than repaid by the results. Once tried always used.-Advertisement.

whipped cream. As a matter of fact,

SWISS CHARD MOST VALUABLE FOR FOOD

Pofitable Source of Calcium Favored as Sauce or Garnish and Iron.

(Prepared by the United States Department of Agriculture.)

When asparagus and the green-leaf vegetables of early spring are gone, the United States Department of Agriculture suggests that the housekeeper may well turn to swiss chard, which endures mid-summer heat fairly well, and has a long season. It is called in some localities "cut-and-come-again," because by taking only a few leaves at a time from each head there is a constant supply. One may eat the leaves of swiss chard as greens, or erve the stalks in the same way as rague, or combine the two. The rence in texture makes the cooked as see. A like an entirely different le from the stalks.

ss chard contains vitamins A and B, and is considered a valuable source of calcium and iron. The aristocratic. On hot chocolate or coyounger, more tender leaves are gen- coa, flavored sweetened whipped cream ally preferred because of their milder flavor. They are cooked in little drinks are served that way at soda water for the shortest possible time, in the same way as spinach and other greens. Chard has the advantage over many other greens of being fairly free from grit and dirt, because the leaves grow so high, and hence is easy to clean. Chard leaves blend well with other greens, especially with kale, dock, sorrel, mustard or dandelion. The leaves are very large and broad, and do not boil down in bulk so much as many greens, so that a smaller quantity of uncooked chard leaves will serve the same number of people as quite a large amount of spinach or other greens. When the stalks are used the leafy portions should be stripped from them. They should be cut crosswise into inch or half-inch lengths and toiled in unsalted water from 10 to 25 minutes. The water should be bolled down rapidly at the last and may be used for soup or vegetable stock. If the leaves are to be served with the stalks, the latter should be cooked from 5 to 15 minutes before the leaves are added. A simple seasoning of butter and salt is usually sufficient if the chard is in prime condition. Boiled chard stalks may be used like celery, in scallops or stews, in hash or otherwise with meats, with diced carrots, peas, string beans, or any convenient vegetable combinations. The stalks may also be cooked whole like asparagus and served on toast with white or hollandaise sauce, or with melted butter Of course, when the prepares e' stalks or leaves of r, the of' dould be served at

SHEER, COLORFUL LINGERIE

Important Protein Foods

Meat, poultry, fish, eggs, milk, soy beans, and peanuts, says the United partment of Agriculture, are important protein foods in These are the foods which epended upon for protein used to special advantage y. Milk is one of the best oods for young and old, and cannot atisfactorily replaced by any other in the diet of growing children. e of these foods are rich in mineral substance; for example, meats and egg yolks in iron, milk in calclum, and peanuts in phosphorus. Many of these protein foods, especially milk and egg yolks, are valuable of vitamins A and B.

Beaten Into Mayonnaise Dressing.

water or to top off a sundae. Bavarian cream is a combination of custard and whipped cream stiffened with gelatin, and flavored with vanilla, coffee, pineapple, chocolate or other flavors, according to individual preference.

A spoonful of unsweetened whipped cream on chicken or other light soups often serves to tempt an invalid or

captious taste. Cream or cottage cheese can be blended with unsweet. ened whipped cream, nuts and pimentos and stiffened with gelatin to make an unusual lunch dish; whipped cream can be beaten into mayonnaise dressing to make it richer and flutter for use on fruit salads.

The most satisfactory cream for whipping is raw cream with a butterfat content of 30 per cent or more. Of course any raw cream used should be of high sanitary quality. Pasteurized cream can be whipped as well, if slightly higher in butterfat; but homogenized cream will not whip nearly as well. If homogenized cream has also been pasteurized its whipping quality is further reduced.

Children Like Rice and Cherries as a Dessert

Here is a dessert the children will like. The rice can be cooked at any time, and combined with the cherries and cream in time to be well chilled. The United States Department of Agriculture suggests using:

cupful cream, whipped (vanil-la and dash of rice (salted) 1 cupful cherries, cut in half 1 cupful powdered Bart) cupful cooked sugar

Cook the rice so the grains will be large, dry, and fluffy. Add the suga the fresh fruit, and the whipped crea Chill thoroughly before serving.
