Barrow-Rutledge Funeral Home

Dear friends, One of the penalties life exacts for love's fulfillment is the anguish of grief. It is a mixture of anxiety, anger and despair over the loss of a loved one, and the greater the love, the deeper the grief. Feelings of anger and guilt, as well as sorrow, must be confronted and surmounted by the bereaved if he is to regain normal emotional health. Respectfully,

Barrow-Rutledge

More information regarding the quarantine is available at County Extension Office.

Livestock producers in Hamilton County are cautioned to keep a close watch on all cattle grazing on small grain pastures as nitrate poisoning may occur. The problem is especially prevalent during periods of cool, cloudy weather as

There are a few steps producers can take to minimize the risk of

1. Feed a high energy ration before placing cattle on small grain pastures. This will provide the animals with energy as well as inhibit a rapid intake of plant material over a short period of time. A mixture of grain and molasses should provide the needed energy.

2. Observe closely all cattle on small grain pastures. A veterinarian should be called at the first signs of illness. Early treatment is necessary to keep affected animals from dying. Other animals in the herd should be moved from the pasture and fed supplementary rations until the suspected forage can be tested.

3. Forage samples may be sent to the Texas Veterinary Medical Diagnostic Laboratory at Texas A&M University to be tested for nitrate content. This service can help producers decide when pastures can be safely grazed.
