## INDEPENDENCE DAY 1951

### Wingo-Mercer Nuptials Read At Canyon

All Saints Episcopal Church in Canyon was the scene recently for the marriage of Mrs. L. Jack Wofford Wingo and Fred Mercer, both of Silverton. Rev. Henry F. Seaton, Rector, read the double ring service.

Mrs. Joseph F. Findley, organist, played a prelude of nuptial sections.

The bride formerly Mrs. L. Jack Wofford Wingo, is the daughter of Mrs. Lily Wofford and the late Jack Wofford, of Silverton.

Mr. Mercer is the son of Mr. and Mrs. H. C. Mercer, of the Francis community.

Mrs. Mercer was graduated from the Silverton high school and West Texas State College receiving her B. S. and M. E. degrees and attended Southern Methodist University and taught in the Dallas schools. She has been teaching in the Silverton school for the past three years.

Mr. Mercer graduated from the Silverton high school. The couple will make their home in Silverton, where he is engaged in farming.

Mrs. T. R. Whiteside, Mrs. Weta Milner, of Gladewater, and Mrs. Lois Cowart, returned Wednesday from a vacation trip through Colorado, Wyoming, Idaho and other points. On returning home Mrs. Cowart stopped over in Amarillo to visit her daughter, Mr. and Mrs. Jack Bursleson.

Mr. and Mrs. Calvin Holcomb, of Tulia, attended church here Sunday. They were enroute to attend a Kimbell reunion in Turkey.

Mr. and Mrs. Bill Middleton and son, of Amarillo, were week end guests of Mr. and Mrs. C. R. Baggett.

### Matched Roping at Happy Sunday, July Eighth

A matched roping will be held at Happy Sunday afternoon, July 8, at 2:30 p. m. Roy Reynolds, of Canyon vs. Morris Stephens, of Silverton, will rope ten calves each.

Also there will be open jackpot roping following the above contest.

### Wanda Sue McDaniel Honored With Birthday Party

Wanda Sue McDaniel was honored Tuesday, June 20, with a birthday party celebrating her seventh birthday. Ice cream and cake were served to Daryl and Reba Maples, Jimmie and Monte Smith, Donna and Geneva May, Peggy and Sandra Mercer, Roy and Joy Morrison, Norma Faye Rowland, Lelia Faye Sweek, Mary Jane Jacobs, Laquita Chitty, Doris Word, Peggy Hollingsworth, Anita Stout, Joe Ann Hollingsworth, Linda Beth McDaniel, Mrs. Cleo Jacobs and the honoree, Wanda Sue.

Mr. and Mrs. Manley Wood were in Plainview Monday where he went for a re-check at the hospital. He is doing fine.

Mr. and Mrs. Alvie Mayfield and sons were business visitors at Walsenburg, Colorado last week.

Mr. and Mrs. Rex Long have moved to a ranch near Walsenburg, Colorado recently purchased by Alvie Mayfield.

Visitors in the A. H. Chappell home Sunday were: Mr. and Mrs. A. A. Howard, Mr. and Mrs. Troy Cox and Latresa, Mr. and Mrs. P. D. Thurmon.

### Call Meeting of Red Cross Scheduled for Thursday Night

Carl S. Crow, county chairman of the Red Cross, has called a meeting of the organization to be held Thursday night, July 5, at 8:30 p. m., in the county courtroom, for the purpose of electing new officers for the organization.

All interested in Red Cross work should keep this date in mind and plan to attend.

### CLAUD CROSSING CLUB MET JUNE 28

The Claud Crossing Community Club met Thursday afternoon, June 28, in the home of Mrs. Ruby Stegle with thirteen members present.

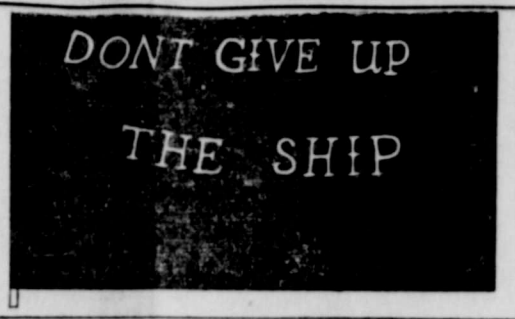

The afternoon was spent in visiting, doing hand work, and opening their packages which revealed who their Sunshine Sisters had been the past three months.

The next meeting will be Thursday, July 26, in the home of Mrs. Edd Thomas. Members present were: Mesdames Billie Lou Thompson, Susie Garrison, Jessie Bomar, Jesse Mae Watson, Kate Turner, Ori Alexander, Evelyn Watt, Artie Northcutt, Mattie Bell Alexander, Monti Lightsey, Lois Thomas, Lottie Garrison and the hostess, Ruby Steele.

Reporter.

Dud Watters went to Oklahoma City Tuesday for his father, Walter, Watters, who has been in Oklahoma City for medical treatment.

Mrs. W. Allard and granddaughters, Ray and Kay Allard, of Redland, California, and Mr. and Mrs. Gus Kalbe, visited Mrs. Vera Allard, who is a patient in the Plainview hospital Monday.

Admiral Perry's Flag

At the battle of Lake Erie, September 10, 1813, Oliver Hazard Perry, who was in command of a fleet which he had been forced to construct in feverish haste from virgin timber, unfurled from his masthead this challenge to sturdy Americanism—the dying words of brave Captain Lawrence. As a result, Perry was able to send his message: "We have met the enemy and they are ours."

Flag of Washington's Navy

This was the flag flown by Washington's six cruisers in 1775. The Lady Washington, a brig fitted out in 1775, was captured by H.M.S. Fowey on December 7 of that year, and her colors were placed in the Admiralty office in London.

The Bedford Flag

Probably the most interesting flag of all the colonial period is this standard of the Bedford Minute Men, carried by them in the Battle of Concord. It is small, only about two and a-half feet square, but it carries woven among its faded threads the love and veneration of a grateful America.

Fort Moultrie Flag

This flag flew from the southeast bastion of Fort Moultrie in Charleston harbor during the famous Revolutionary battle of June 28, 1776. Early in the attack the emblem fell outside the parapet. Sergeant William Jasper, crying, "Don't let us fight without a flag," leaped over the wall in a rain of bullets and replaced it in position.

The Bennington Flag

At the battle of Bennington, Vt., August 16, 1777, 2,000 Green Mountain Boys under Gen. John Stark practically annihilated the forces under General Baum, sent to capture stores and to overawe the country.

### More Funds Needed To Help Keep Local Cemetery Clean

George Seaney, who has charge of seeing that the Silverton Cemetery is cared for, has asked that we announce that funds to keep the cemetery are running low, and anyone wishing to donate to see him or mail their check.

Mr. Seaney said that so far the cemetery was in good shape, but in order to keep it clean, they will need more money to hire help to keep it that way.

### FARM PROGRAM From the County PMA Committee

The Department of Agriculture has authorized the Soil Conservation Service and the Production and Marketing Administration to have offices in the same building. This authorization was made in an effort to give faster and better services to the farmers.

The new locations of these offices in Silverton are the former location of the Y & M Grocery.

The SCS assisting the Cap Rock Soil Conservation District have met with the County Committee of the PMA and discussed the new procedure in which permanent conservation practices will be carried out, the Soil Conservation Service will lay out and check all permanent type practices on which the PMA now make substantial payments on.

This new procedure was adopted to make it possible for soil conservation to be applied on the farms in the shortest and probably least expensive manner.

Troy V. Cox and Wayland Fitzgerald have had diversion terraces laid out in the past week by the SCS technicians for the protection of cropland at the foot of long slopes. Both of the diversions are designed to divert excess water, which was causing gully erosion, onto well coddled pasture. Mr. Cox's diversion terrace is now under construction.

### A. A. HOWARD FAMILY ATTEND FUNERAL OF FRIENDS

Mr. and Mrs. A. A. Howard and son, Joe, attended the funerals in Plainview and Olton Monday afternoon for Daniel Jasper Clark, Jr., and George T. Allen, both young men were friends of the Howard family.

The two men were killed early Saturday evening when their light plane crash between Plainview and Olton.

Rites for Clark were held at Olton Church of Christ at 2:30 Monday afternoon.

Services for George T. Allen were held at 5 o'clock Monday at First Methodist Church, Plainview.

Mrs. Jack Nixon and daughter, of Bronte, Texas, are visiting her parents, Mr. and Mrs. W. G. Byrd and sisters, Mr. and Mrs. J. W. McCracken and Mrs. Adella May. The party visited Mr. and Mrs. Johnnie Byrd in Happy from Monday afternoon until Tuesday.

Mrs. C. E. Anderson, of Quitaque, visited her parents, Mr. and Mrs. Austin Bailey Friday.

Mr. and Mrs. Roscoe Forte, of Lubbock, visited friends here Saturday afternoon. They were enroute to Turkey where they were to attend a family reunion Sunday.

### West Texas Gas Co. Asking for Service Rate Increase

C. I. Wall, president of the West Texas Gas Company, announced today his company has filed a petition with the Texas Railroad Commission for an increase in its general service rate.

Mr. Wall said that for sometime we have been concerned over the fact that ever increasing costs of material, labor, taxes, gas purchased for resale, etc., might make it necessary to request an upward adjustment in our general service rate. He stated further that since the company began operation in the fall of 1927 that several downward adjustments in rates have been made—the last reduction being made in 1940.

This is the first general service rate increase to be requested by the company.

A proposed rate has been filed with the petition to the Railroad Commission—a copy of which is being presented to the Mayors of the towns the company serves. The proposed rate increase would not increase the present minimum charge which is \$1.25 per month for the first two thousand cubic feet used. Twenty-three per cent of the bills rendered to residential and business customers are for two thousand cubic feet or less.

To show the effect of the rate increase the company has made application of the new rate to the actual annual consumption of over seven hundred residences representing several from every town served. The average annual residential consumption for the calendar year 1950 was 86 MCF.

Taking the first fifty examples cited in each of several groups, arranged by annual consumption, the following average annual increases will occur:

Annual Con.	Increase in Bill
41 to 60 Thousand Cubic Feet	\$2.82
61 to 80 Thousand cubic feet	\$4.55
81 to 100 thousand Cubic ft.	\$5.99
101 to 150 Thousand cub. ft.	\$8.13

### "Up Front" Showing At Palace Theatre July 8 and 9

Remember those Mauldin War Cartoons? They come to life. The Laughiest pair of G.I.'s that ever dug a foxhole, or annoyed an M. P. "Francis" was funny, this is funnier, and there's a bit of Hot Mediterranean Romance.

David Wayne and Tom Ewell, in an advanced post north of Naples are reasonably happy because their feet are dry until a new captain draws fire on their foxholes. They retreat to a village which is shelled and David is wounded when a wine cask caves in on him.

Tom wangles a pass, so he can visit his pal in Naples. His muddy, ragged appearance gets him into complications with the military police. More complications follow when he induces David to steal a uniform in the hospital and they go in search of adventure which winds up in a bootlegger's apartment. They return to the front with a load of supplies, pursued by a squadron of military police who are immediately ordered into the fighting ranks.

Next weeks program appears on page two.

Mr. and Mrs. Luke Thompson went to Brownwood Sunday after their children who had spent two weeks there visiting relatives. Mrs. Thompson's father, G. D. Cates, accompanied the home for a visit.

### Do's and Don'ts for Your Summer Vacation Automobile Trip

Automobile travel on the nation's highways is expected to reach a new peak this summer. To help travelers get the most pleasure out of touring, and to help keep their cars in the best possible condition, the Buick Service Department reminds owners of the following DO's and DON'Ts:

- DO be particularly careful to watch crankcase oil level on long trips.
- DO remember to switch tires and to watch pressure, especially on hot days.
- DO wash your car once a week to remove road film and chemicals.
- DO sit in a comfortable, erect position and rest frequently.
- DO keep the windshield free of dust and dirt at all times.
- DO give your car a Lubricare treatment.
- DO remember that most drivers can get 10 per cent more miles per gallon by observing economy rules.
- DON'T neglect inspection and adjustment of brakes before starting a long trip.
- DON'T allow grime and dirt to accumulate on chrome. Clean as frequently as necessary.
- DON'T take chances with improperly aimed headlights. Your safety is at stake.
- DON'T put off having the air cleaner cleaned and refilled with new oil.
- DON'T forget in warm weather your battery needs water frequently. Check it often.
- DON'T block vision with gadgets and stickers.
- DON'T drive faster than conditions warrant, don't run risks on the highway, and don't drive if you are fatigued.

## SUPPLEMENTAL PASTURES ARE RECOMMENDED BY SPECIALISTS

Plant supplemental forage crops to insure against a shortage of grazing on permanent pastures during summer drought and to provide forage for winter storage, advises A. W. Crain, pasture specialist for the Texas Extension Service.

Sudan grass and cowpeas make a good grass-legume combination for supplemental summer grazing. Crain recommends planting a 50-50 mixture of sudan grass seed and cowpeas. Use a corn or cotton plate in the planter and plant about 20 pounds of the mixture to the acre in two to three foot rows.

Crain points out that Chinese red cowpeas cost less than half as much as other varieties. If Chinese red are not available, any other variety may be used. Sweet sudan grass is recommended over the common variety.

Farmers who now have sudan or other supplemental forage growing can benefit by topdressing with a nitrogen fertilizer, if moisture is available. Crain suggests using 150 pounds of ammonium sulphate, 100 pounds of ammonium nitrate or 50 pounds of anhydrous ammonia.

Sudan and cowpeas can be planted as late as mid-July, says the pasture specialist. He emphasizes that land planted to annual winter legumes should not be allowed to lie idle during the summer. Plant supplemental forage crops—a good grass-legume combination.

Mrs. C. T. Jarvis, of Estelline, visited her daughter and family, Mr. and Mrs. Mike Mason, from Thursday until Saturday of last week.

## BIRTH

Mr. and Mrs. Dee McWilliams are the parents of baby boy born Friday, June 28, 1951, in the Tulia hospital, weight seven pounds fourteen and one-half ounces, named Paul Ray. Grandparents are Mr. and Mrs. Paul Webb, of Tulia, and Mrs. C. L. McWilliams, Sr., of Silverton.

Mrs. C. L. Bowman and son, Mr. and Mrs. Volus Bowman, of Electra, Texas, visited in the home of Rev. and Mrs. G. A. Elrod last Friday.

Rev. and Mrs. G. A. Elrod visited J. R. Burson in Plainview last Tuesday.

## 'Mothballing' Process Is Said Much Improved

WASHINGTON—The United States Army's "mothballing" process, a system designed to protect "G. I." war equipment from rust and corrosion when not in use, may be greatly simplified as a result of tests now being conducted by the Army Ordnance Research and Development Division.

Proper packaging is of prime importance in protecting war materials from severe weather conditions and many of the protective methods adopted by the Army during World War II have proven to be expensive, complicated, and time consuming while failing, in many instances, to offer complete protection for the equipment.

Army Ordnance may have the answer to the problem of providing long-range protection for equipment as a result of its exhaustive tests with a new chemical now being used commercially. The chemical, technically known as "volatile corrosion inhibitor," is a powdery substance which releases a thin vapor, forming an invisible protective shield around steel or aluminum. The vapor film neutralizes the effect of moisture and air on the metal surface, thus preventing rust and corrosion from taking place.

### Protective Wrapper

This inhibitor is applied as a coating on one side of a packaging paper and provides a wrapping for the equipment to be protected. Only very simple operations are required to fully protect a weapon or other steel objects from the danger of rust or corrosion; that of placing a clean gun in a treated wrapper and sealing the package. When the wrapper has been sealed, the vapor inhibitor completely surrounds the metal, penetrating to the smallest parts with its protective film to insure complete protection.

The vapor inhibitor would radically alter the present methods used to safeguard Army equipment. At the present time, Army rifles, machine guns, and other metal parts are being packed in a heavy grease for protection against rust and corrosion. Experts say that it is almost impossible to coat every part of a weapon because some parts are too inaccessible to reach with conventional preservatives. As a result, such parts go unprotected and may begin to rust within a short period of time.

Removing the grease and getting the weapon ready for use has presented additional difficulties. Ordinarily, cleaning rifles with a wire brush and solvent takes a skilled man at least 26 hours to prepare a case of 10 M-1 rifles for use. Because of the detailed cleaning required, many small parts are lost; parts that must be replaced before the weapon can be fired. With all these precautions, rust and corrosion still appear in small spaces.

### Easier Cleaning

From the soldier's viewpoint, it is also evident that any new system of cleaning would be an improvement over the solvent and wire brush drudge. Now, Army Ordnance may have the answer to the "G. I.'s" dream of easier cleaning techniques.

Recent tests of the chemical have produced many significant results. If the treated wrapper should be punctured during shipment and moisture allowed to enter the package, the vapors will still protect a weapon even in the presence of 100% humidity. This protection lasts for a shorter period of time than that ordinarily given when the package is completely sealed, however.

A short time ago, a large number of rifle barrels protected by treated wrappers were shipped to Tokyo, Japan and placed in storage vaults. When the 90-day test period had ended, the barrels were removed from their protective packages and no evidence of rust or corrosion appeared. To further attest to the effectiveness of the vapor inhibitors, the rifle barrels gave the same appearance as newly processed parts.

Army Ordnance is now conducting experiments which may improve the old protective "cacoon," used at the end of World War II to protect planes, guns, and vessels from severe weather conditions. Researchers have developed a "shroud" or "cloak" treated with vapor inhibitors which may be placed over aircraft engines and objects of similar size in one operation. To date, these tests have produced highly satisfactory results.

### Man Finds Smart Piggies Won't Always Act the Hog

WATERTOWN, Wis. — Contrary to popular belief, a smart pig won't make a hog of himself.

John Schroeder, Watertown, is now in the manufacturing business because he believed in a porker's ability to balance his own diet.

Schroeder built a hopper that contained 800 pounds of feed in an attempt to simplify his pig feeding problems. The feed was mixed with water and stirred by electricity, before passing on to a trough, from where the pigs help themselves.

The automatic feeder was so successful that Schroeder now makes and sells them commercially.

## CITATION BY PUBLICATION THE STATE OF TEXAS.

To Joseph Leroy Nichols, Defendant, Greeting:

You are hereby commanded to appear before the Honorable District Court of Briscoe County at the Court House thereof, in Silverton, Texas, at or before 10 o'clock A. M. of the first Monday next after the expiration of forty-two days from the date of the issuance of this citation, same being the 6th day of August, A. D. 1951, then and there to answer Plaintiff's Petition filed in said Court, on the 21st day of June A. D. 1951, in this cause, numbered 1398 on the docket of said court and styled Mozelle Sanders Nichols, Plaintiff, vs. Joseph Leroy Nichols, Defendant.

A brief statement of the nature of this suit is as follows, to-wit: Plaintiff sues Defendant for a divorce on grounds of cruel and harsh treatment to her by said Defendant, rendering their further living together as man and wife insupportable. Plaintiff asks for her decree of divorce and full custody, care and control of her unborn child; as is more fully shown by Plaintiff's Petition on file in this suit.

The officer executing this process shall promptly execute the

same according to law, and make due return as the law directs.

Issued and given under my hand and the seal of said Court, at office in Silverton, Texas this the 21st day of June, A. D. 1951. (Seal) Attest: Dee McWilliams, Clerk District Court, Briscoe County, Texas.

\*Here give brief statement of nature of suit, proper description of property, if any, and interest defendants are alleged to hold in said property, if they have an interest therein. See Rule 114, Rules of Civil Procedure. 26-4tc

Mrs. Paul Reid and daughters, Paula and Wanda, left Friday for Oklahoma City where they will visit Mr. and Mrs. Albert Reid.

## A HOME TO LIVE IN

### SMALL HOUSE PLANNING BUREAU ST. CLOUD, MINNESOTA

Design A-214. Here a thorough living room separates the service and sleeping quarters and looks out on both front and garden views. A rear door leads to a concrete terrace overlooking the yard. The fireplace is located away from traffic yet is placed so the furnace flue can be included. Traffic is confined to the front of the living room which can also be used for dining.

Corner windows, with sink below, increase cabinet wall space yet leave room for kitchen dining.

The utility room contains storage closet, cabinet, heating and laundry equipment and service sink and is convenient to the side entrance and the kitchen. In addition there are three bedrooms with wardrobe closets, bathroom, linen cabinet and coat closets.

Exterior finish is wide siding, a touch of brick and asphalt shingles.

Floor area is 1147 square feet and cubage 13,191 cubic feet.

For further information see your local lumberman.

## AND THE SPIRIT OF FREEDOM....

still lives in the youth of our nation. We shall have forsaken our boulder duty as parents — as the elder generation — if by any action, or lack of it, we lead this nation to socialism and leave our youth bereft of the spirit of freedom they cherish, and for which those who came before them have died.

## SOUTHWESTERN PUBLIC SERVICE COMPANY

26 YEARS OF GOOD CITIZENSHIP AND PUBLIC SERVICE

**Vitamin C Can Be Retained Freezing Orange Juice**

Approximately 98 per cent of the vitamin C in fresh oranges can be retained in the frozen, concentrated juice if proper methods are used, a report to the Council on Foods and Nutrition of the American Medical Association revealed. The report said "the frozen concentrated product can be as valuable from a nutritive content as is fresh orange juice." It was pointed out that fresh oranges of good quality picked at the proper time were essential to insure a high vitamin C content in the concentrated product. The report said: "For example, studies indicate that the vitamin C content of fresh oranges may show considerable variation. This is due in part to seasonal influences. In general, fruit picked in midseason tends to be higher in vitamin C content than does that picked early or late in the season. Other factors, including variety of fruit, degree of ripeness and condition of the soil, also significantly affect the vitamin C content of the fresh fruit." "The danger of Vitamin C loss," the report continued, "is most likely to occur as a result of improper handling or storage in the home. For example, if after reconstituting the juice is allowed to stand in open containers at room temperature, appreciable losses will occur. However, if the reconstituted juice is placed in the refrigerator at 40 degrees F., vitamin C losses will be negligible."

**Violent Deaths Not Always Fully Probed, Doctor Says**

Only 13 per cent of the people in the United States are protected by adequate investigation of violent or sudden deaths, according to Dr. Richard Ford of Boston. In most states, Dr. Ford points out in the Journal of the American Medical Association, the coroner is not required by law to be a physician nor are there adequate facilities or thorough investigation of such deaths. Dr. Ford estimates that 300,000 (20 per cent) of all deaths annually are from violent or obscure causes. If medical examination is not a definite part of the investigation in these cases, he said, the true cause and manner of death in many instances may never be established. How does such medical investigation serve society? Its most important function is to exonerate the innocent, Dr. Ford believes. But disclosing murders, providing evidence for civil and criminal courts, recognizing fatal contagious diseases, exposing industrial health and safety hazards are also important. Too often, he continued, the driver of a vehicle involved in an accident is given full blame for killing or injuring a pedestrian whereas the victim — because of drunkenness, disease, or medication — is often equally at fault.

**Cotton for Cots**

More than 41,000 bales of lint cotton and 61,000 bales of cotton linters will be required by the Army, Air Force and Navy in 1951 for bedding. The Defense Department indicated that this material will be used to produce bed tickings, mattress felts and covers, pillows, pillow cases and covers, and sheets. It is estimated that mattress felts will consume the entire 61,000 bales of cotton linters and waste, while bed ticking and mattress covers are expected to use 15,000 bales of lint cotton. Pillows, pillow cases and covers will require about 2,000 bales of lint cotton and sheets will consume the remaining 24,000 bales. Nearly 52 million yards of cotton fabric are expected to be required for these items. Of the total number of square yards, approximately 31 million will be needed in sheets; 18 million in bed tickings and mattress covers; and three million in pillows, pillow cases and covers.

**Steel Sales**

Sales of automobiles and household goods made largely of steel attained higher levels in 1950 than in any previous year. For several important items in this field sales were twice as large as in 1940. Deliveries of steel to manufacturers of automobiles, appliances and a few other household items in the first 10 months of 1950 were over 13.6 million net tons, exceeding the shipments to these industries in all of 1949 by nearly 1.6 million tons and surpassing all of 1940 by more than 5.5 million tons. For the full year of 1950 it is estimated that shipments of steel to makers of the foregoing types of goods was 16 million tons or more, approximately twice as much as a decade earlier.

**Going Metropolitan**

One-quarter of the people of the United States are now rated as metropolitan, living in the urbanized areas of the nation's 12 biggest cities with populations of a million or more, according to preliminary figures issued by the Bureau of the Census. Together these 12 urbanized areas have a population of nearly 38 million. The New York-North-eastern New Jersey area is first with combined population of over 12 million, followed in order by Chicago, Los Angeles, Philadelphia, Detroit, Boston, San Francisco-Oakland, Pittsburgh, St. Louis, Cleveland, Washington and Baltimore.

### Prediction: Racket Of Fortune Telling Continues Forever

NEW YORK—In this uncertain world, about the only prediction that can be safely made about the future is that fortune telling will continue to be a profitable racket, probably to the end of time.

Head of the Bureau of Records and Criminal Information of a large metropolitan area estimates that hundreds of thousands of dollars are squandered annually in his city alone by persons who are determined to consult fortune tellers at any cost. This includes a steady stream of ladies interested in learning what the future holds for them, from the bottom of a teacup.

The racket is as old as recorded time and even older. All that has changed are the names by which those who ply it are called. In Biblical times and during the Middle Ages, they were known as seers, soothsayers, sorcerers, stargazers, prognosticators, super-naturalists, and diviners. Today, they pose as swamis, card and palm readers, crystal gazers, numerologists, astrologers, spiritualists, and telepathists or mind readers.

The ancient city of Babylon, mistress of witchcraft, was a hotbed of sorcerers, diviners, astrologers, stargazers, and monthly prognosticators. Stargazer-priests spent most of their time on temple zigzags measuring the angles and movements of the stars with "astrolabes" while their assistants drew maps of the heavens from the "data" assembled. Sorcerers and diviners made prophecies from thunderstorms, earthquakes, eclipses and even by consulting the clay models of the livers of sheep.

Court supernaturalists were handsomely rewarded by the Egyptian Pharaohs, including King Khufu who reigned about 2775 B.C. Typical reward for a day's work was a thousand loaves, a hundred jugs of beer, an ox, and a hundred bunches of onions.

In early Greece, the future was foretold in sacred places called oracles, which were handsomely supported by the people. Most famous of these was the oracle of Apollo at Delphi, where a frenzied priestess suspended in a cauldron hung from a tripod, answered the questions of worshippers.

### United States Population Increase High for 1950

NEW YORK, N.Y.—The population of the United States was increasing at the highest rate in its history during the latter half of the year 1950.

The actual population increase for the year was 2,474,000, but increase was greatly accelerated during the months from July through December.

Increased birth rates are expected to continue for the next decade. By 1956 or 1957 it is estimated that the country will have a population of 165 million—the number predicted for the nation in 1990 by some 1930 statisticians.

### Sergeant Psychologist Keeps His Troops Happy

WITH THE FIRST MARINE DIVISION IN KOREA—A rare combination—psychologist and mess sergeant—but Marine Master Sergeant John H. Riggs of Oceanside, California, meets the requirements.

The mere mention of food being dehydrated seems to have an annoying effect on Marines. But Sergeant Riggs mixes a little practical psychology with careful preparation and seldom a dissenting note is sounded about breakfasts served to the First battalion of the 7th Marines.

The solution: When Marines have fresh eggs on the morning menu, Sergeant Riggs saves the shells. Then, on succeeding days when the dehydrated eggs are served, the cooks merely scatter the real shells in the trash dump. Pronto, the troops leap to the conclusion that they are having fresh scrambled eggs.

Just strewing shells in sight is usually sufficient, but Sergeant Riggs admits, "Sometimes we sprinkle a few shells into the dehydrated eggs to be really sure of the effect."

### Music Prof's Worm Hobby Pays Better Than Waltzes

TALLEQUAH, Okla.—Worms and waltzes could be said the hobbies as well as the livelihood of music professor Lloyd K. Herren.

Herren divides his time and attention between music classes at Northeastern State College and 30,000 hybrid red wigglers that he raises in his back yard. Together they net him a nice income, the worms probably providing the largest share.

The professor not only sells the worms in wholesale lots to fishermen, but also sells the enriched dirt he raises them in to farmers for fertilizer.

Herren says that his worms are valuable because they wiggle much longer than the garden variety when they have been placed on a book and immersed in water.

"It's not the size of the worms that get the fish," he says. "It's the wiggle. Mine wiggle for 15 minutes under water."

### Reversible Bifocals Soon Available to Spec Wearers

A new type of eye glasses which allows the bifocal portion to be moved out of the way when not needed is described by Dr. David E. Rolf of Cleveland in the Archives of Ophthalmology, published by the American Medical Association.

According to Dr. Rolf, the lenses of the glasses may be rotated, or turned upside down, by a unique method of attachment, so that the bifocal part is on top instead of on the bottom. In his opinion this reversible lens arrangement has certain advantages. He said:

"Its flexibility will save many patients an extra pair of glasses. It offers a possible solution to the long-standing problem of the patient who cannot accustom himself to walking while wearing bifocals in their usual position. It also permits the bifocal segment to be placed upward and out of the way during all or part of his walking activities. It would also seem applicable for patients engaged in occupations with unusual visual demands. Patients in these categories include barbers, switchboard operators, painters and paper hangers, as well as most people employed in the building trades, where sure footing is a necessity."

Dr. Rolf believes that the mechanics of changing the position of the lenses are sufficiently simple so that most persons are able to master them easily. He said there are no limitations regarding size, shape or type of bifocals or trifocals that can be used and the technique of prescribing and fitting these lenses is not difficult.

### Magistrates Continue Life Of England's Lilliput Town

At a Lilliput town of hip-high houses and finger-size inhabitants, the County Council planners of Buckinghamshire, England, have met a big detour sign.

The model village of Bekonscot, set up at Beaconsfield about two decades ago, will carry on, the Beaconsfield magistrates have ruled, in denying a recent Council demand for its closure as a detriment to the local residential area.

The decision will interest thousands of visitors who have flocked to this spot from all over the world. It is a reminder that the unique miniature of England's architecture and way of life has survived both wartime devastation and postwar austerity.

Tiny Bekonscot itself is a graphic example of planning a community to fit its environment. Covering some two acres of the Callingham estate, it spreads over a Lilliput landscape of hill and dale, complete with airport, docks, and an elaborate electrically run railway system.

Buildings, people, and animals have all been reproduced exactly to scale—an inch to a foot. The result is an illusion of reality so strong that a real bird alighting in a field of miniature farm lands and grazing cattle seems like some giant creature from the Brooding-nag land of "Gulliver's Travels."

### Vanishing American

A bit of enchantment has fled the streets of American cities. The sight and sound of it made children dance and lifted the hearts of their elders. It was spring itself, that trio of organ grinder, barrel organ and "monk," notes the National Geographic Society. Yet today the great city of New York is reported to have but one organ grinder left, a man of 75 years slowly cranking out the tunes of yesteryear. The tinkling voice of his barrel organ is barely heard amidst the whirl of motor cars with strident horns, the blare of countless radios, television sets and record players. Things were different 20-odd years ago. . . . The Barrel organ—or hurdy-gurdy, as it is often called—was the rage of New York in the late, gay 1920's. While an estimated 300 professional Italian grinders strode the streets, rich and famous amateurs cranked away on their own "machines" set up in fashionable drawing rooms.

### Painless Childbirth

An improvement of the nerve block technique in painless childbirth—which involves only one site of injection instead of the former two or four—is described in the Journal of the American Medical Association. Dr. Orlen J. Johnson of Bay City, Michigan, reports that he has used the new technique on 161 women, of whom 92 were becoming mothers for the first time. With skilled injection, he explained, the patient complains of no discomfort. He added that no reactions from the procaine, a local anesthetic, or complications have been encountered and that there has been no greater discomfort or delay in the healing of surgical incisions.

### Compass Points

Except in the Arctic and Antarctic regions, the compass needle points approximately the same in both northern and southern latitudes. The needle is actually a small magnet, pivoted so that it can move freely around its center. One end points toward the north magnetic pole of the Earth, which is located on the Boothia Peninsula north of Canada. The other end points toward the south magnetic pole, in South Victoria Land, which is directly south of the eastern coast of Australia.

### Original Letters Provide Intimate Views Into the Past

WASHINGTON, D.C.—"If I were to go over my life again I would be a shoemaker rather than an American statesman." Thus wrote aging John Adams, second President of the United States, in philosophical retirement with his beloved classics at his home at Quincy, Mass., in 1801, shortly after his term expired.

The original letter is one of several hundred items, providing a panorama of intimate home life in the early nineteenth century, of an Adams family collection recently placed on exhibit at the Smithsonian Institution in Washington. The collection was placed on deposit with the Smithsonian about a year ago by Mary Louisa Adams Clement, of Edge Hill, Warrenton, Va., direct descendant of both John Adams and John Quincy Adams. With the donor's death last fall the material became a permanent part of the national collections.

It is, by and large, the sort of material that would have been accumulated by a well-to-do American family of the period, but augmented through the wide connections of the Adamses as diplomats and statesmen in some of the most crucial years of American history. There are six original manuscript letters from John Adams and John Quincy Adams. Among the most interesting articles in the collection is a manuscript poem, a parody on Byron's Don Juan, by John Quincy Adams.

The entire collection comes close to being the contents of an antiquarian's treasure chest, quite aside from its historic significance. Listed under jewelry, for example, are more than 50 items. Notable among them is a coral tiara set on a silver comb with individual coral beads set on a gold scroll design, which is shown in the best-known portrait of Mrs. John Quincy Adams. Notable among the items is a naturalist's hand microscope used by John Quincy Adams, who as an early disciple of the natural sciences played a leading part in the establishment of the Smithsonian. Included, also, is a set of game counters owned by the sixth President, made of brass set with turquoise in a jet holder—in a velvet and satin-lined leather case.

### 'Mama' Doll Spills Beans By Crying for Investigator

NEW YORK, N.Y.—The little doll said "Mama" in a pleading voice, but the sound was music to the ears of John Carroll, detective.

He heard the doll cry out just as he was leaving Mrs. Georgia Smith's Brooklyn home after a routine check for a \$1,700 diamond ring reportedly stolen from one of her employees.

Carroll broke open the doll held by Mrs. Smith's small daughter. There, he said, he found the multi-carat sparkler.

Mrs. Smith was held in \$2,000 bond on a grand larceny charge. The doll didn't even get indignation from eating carats.

### Protest Bonfire Rally Cancelled by British Rain

LONDON—Four housewives who attempted to stage a protest bonfire of ration books at the Houses of Parliament recently reckoned without the frequent British rain. The demonstration was to be staged by the British Housewives League against "an outworn and unjust system of food rationing"—with speeches and everything.

A sudden downpour huddled the four "firemakers" under the quadrangle of a parliament building—alone save for scores of newsmen.

### PERSONALS

Mr. and Mrs. Roy Allard, of Brice, were business visitors here Monday.

Mrs. Fave Billingsley and son, Bo, of Lubbock, visited friends and relatives here Monday.

Mr. and Mrs. C. E. Young, of Turkey, visited in the home of Mrs. Mattie Perry Sunday.

Mr. and Mrs. A. D. Arnold and son, Gean, and Mrs. Carroll Garrison, and Jerry, returned Sunday from a trip to Yuma, Arizona, where they visited their son and family, Mr. and Mrs. Jerald Arnold.

Mrs. Joe Williamson, of Wichita Falls is visiting her sister, Mrs. Lem Weaver.

Mrs. V. L. Chappell is visiting her sister in Amarillo this week. Her sister underwent an operation Friday and she will remain with her for two weeks.

Mr. and Mrs. Bruce Womack visited their daughter-in-law, Mrs. Raymond Lee Womack at Big Spring Sunday. Mrs. Womack recently underwent surgery and is reported doing nicely.

Always Pay!

"The bonds I bought  
for our country's defense  
will see my twins  
through college!"

MRS. MARY CALLON OF INDIANAPOLIS, INDIANA  
CAN TELL YOU—IT'S PRACTICAL  
AS WELL AS PATRIOTIC TO BUY BONDS FOR DEFENSE

"I have twin reasons for buying bonds," says Mary Callon, introducing 17-year-old Jack and Janet. "I've been a widow since my children were 8, but they'll have a college education. The U. S. Savings Bonds I've bought will see them through."

Mrs. Callon says, "In 1942 I enrolled in the Payroll Savings Plan at the U. S. Naval Ordnance Plant where I'm an executive secretary. I put 10% of my pay each week into bonds. I've discovered it's regular saving that makes saving possible at all!"

"By careful managing, the twins and I live comfortably. How thrilled I'll be to see them enrolled in Butler University this fall, thanks to my U. S. Savings Bonds! Every breadwinner should buy bonds—there's no better way to save money!"

*Mrs. Callon's story can be your story, too!*

What Mary Callon did, you can do, too—start now! It takes just three simple steps.

1. Decide to put saving first, before you even draw your pay.
2. Save a regular amount systematically, week after week or month after month.
3. Sign up today in the Payroll Savings Plan where you work or the Bond-A-Month Plan where you bank.

You'll be providing security for yourself, your family, and our free way of life.

**U. S. SAVINGS BONDS ARE DEFENSE BONDS—  
BUY THEM REGULARLY!**

At the very moment you're reading these words, this man is standing ready to risk his life for America—and for you.

Is there anything that YOU can do to help HIM?

Yes. Starting right now you can buy more... and more... and more United States Defense\* Bonds! Sign up for them today—through the Payroll Savings Plan where you work or the Bond-A-Month Plan where you bank. Defense is your job, too!

The U. S. Defense Bonds you buy give you personal financial independence

Remember that when you're buying Defense Bonds you're building a personal reserve of cash savings. Money that will some day buy you a house, or educate your children, or support you when you retire. Remember, too, that if you don't save regularly, you don't save at all.

So go to your company's pay office—now—and sign up for regular Defense Bond purchases through the Payroll Savings Plan. In this plan, you may save as little as \$1.25—or as much as you want—each week. If you can save just \$7.50 weekly, in ten years you'll have bonds worth \$4,329.02 cash! You'll be helping protect America—and helping make your personal dreams come true.

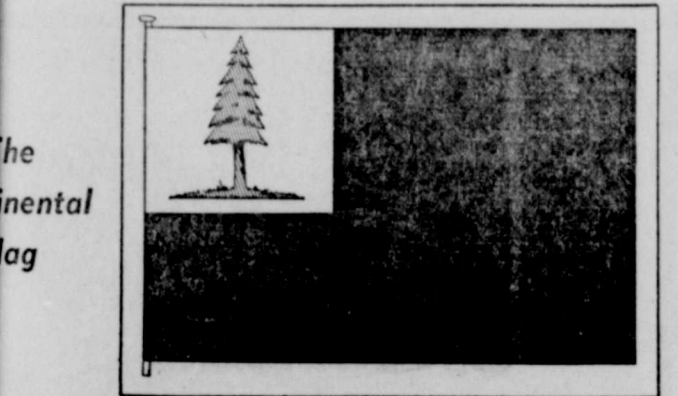

MAY SAY, perhaps, that the first flag was the multi-ribbed rainbow which Jehovah unfurled across the skies after the flood to signal his covenant with man, promising that He would send the waters to cover the face of the earth and destroy all flesh.

Whether or not flags are of this divine origin, they have served as a visible bulwark of idealism through the ages, and in that service there is surely a touch of divinity. Certainly our American flag—the child of Independence Day—has always floated from the pinnacle of resolve and lofty idealism.

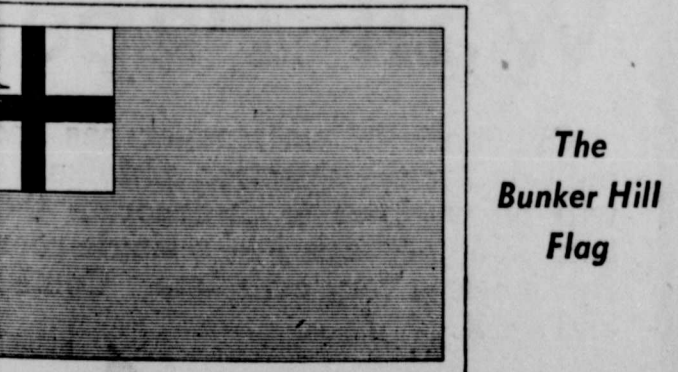

The story of the Stars and Stripes is the story of the nation itself; the evolution of the flag is symbolic of the evolution of our free institutions. Its development epitomizes the amazing expansion of our boundaries and the development of our natural resources. It says, in a single, brilliant flash of color, all there is to say about the United States.

For a real beginning, we go as far back as 1620, when the Pilgrims strode ashore on the Plymouth to become America's first colonists. They had the union flag of England on the mainmast of their ship and they flew it over their settlement.

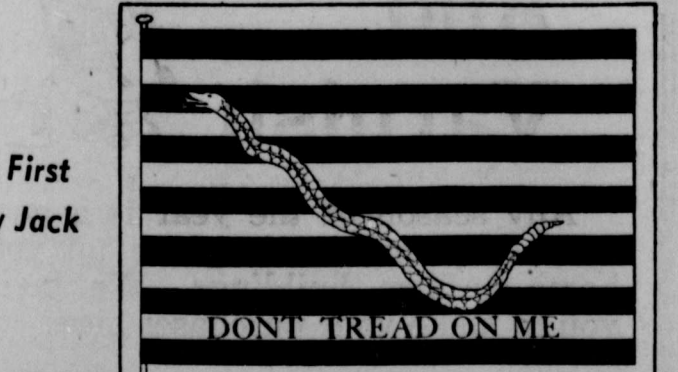

The union flag was not the first American flag, but it was the first flag in America. And, in a sense, it contained the colors of American independence.

This is one of the several famous "pine tree" flags of American history. It was said to have been carried at the Battle of Bunker Hill. Design of the flag probably was derived from the English ensign, which was in use prior to 1705, by omitting the St. George's cross and substituting the pine tree.

Here is another variation of the "pine tree" theme; this flag, too, was carried by Colonial soldiers at Bunker Hill. Also an adaptation of an English emblem, it was derived simply by inserting a pine tree in the upper left quarter of the old blue ensign's canton which indicated the rank of an admiral in the English navy.

As the first jack of the infant American navy, this ensign was hoisted on December 3, 1775. That was the day that John Paul Jones first hoisted the navy ensign over the 13 colonies, when Commodore Esek Hopkins assumed command of the navy built by congress. This flag presents one occurrence of the rattlesnake device, which has been seen again and again in our early American flags.

What a Gasoline!

PHILLIPS 66 is packed with HI-TEST ENERGY

Oh, Baby... what a lift your car gives you when you fill up with Phillips 66 Gasoline! It's loaded with Hi-Test energy!

The Hi-Test elements in Phillips 66 Gasoline help you enjoy smooth performance. Phillips 66 fires fast and evenly, providing easy starting and lively acceleration. And you save gasoline because Phillips 66 is blended to burn efficiently...to help prevent waste and oil dilution.

Along with all this, Phillips 66 Gasoline is controlled according to the season. Winter, summer, spring or fall, Phillips 66 is right for your car. Fill up at any station where you see the famous orange and black Phillips 66 Shield.

### America Depends on Family Car.

Most car rides—68 per cent—are taken for essential or important reasons.

**DETROIT**—On an average day, at least one out of every three adults in the United States uses a passenger automobile for some essential purpose such as riding to work, conducting business or going shopping.

This and some 20,000 other facts about how the American family car is used were revealed in a nation-wide survey recently conducted by the Alfred P. Sloan Foundation.

It was learned that 59 million people over the age of 14 ride in automobiles on an average day. This represents more than half of the U. S. adult population. Nearly half of these individuals use a car in connection with earning a living during a typical day, while almost one-fourth of them go shopping by automobile.

About 40 per cent of all rides taken in motor cars, and nearly one-half of the total passenger miles traveled, are for livelihood purposes, the survey showed. Shopping accounts for another 17 per cent of the rides and 11 per cent of the passenger mileage.

These indications of America's growing dependence upon the family car for essential transportation are borne out by automobile and population statistics of the past 10 years. While our population has grown 15 per cent since 1940, car ownership has increased

about 50 per cent. Passenger car registrations for 1950 totaled 40,167,000 compared with 27,372,397 in 1940.

This growth in the automobile population has taken place despite the fact that motor vehicle production between 1940 and 1950 was less than in either of the two preceding decades. Consequently there are more older cars on the road today. The average passenger car is about eight years old, compared with the prewar average of 5 1/2 years. Likewise, there is a lack of middle age cars as a result of the wartime halt in automobile production.

In addition to the need for motor cars as essential transport tools, the nation relies on them as a major source of business activity, employment, and tax revenues. The automotive industry directly creates business for at least half a million separate enterprises, or one out of every six firms in the country. One out of every seven jobs, for a total of more than nine million, are automotive.

The average automobile buyer pays about \$95 in Federal excise tax on his new car. Last year, total automotive excise payments contributed nearly two-billion dollars to Federal tax coffers. In addition, highway users paid some \$2.5 billion in special state motor vehicle taxes and fees for an average of nearly \$55 per vehicle.

### PERSONALS

Ray and Kay Allard, of Redland, California, are visiting their grandparents, Mr. and Mrs. W. Allard and other relatives.

Rev. Sam Ogan, of Borger, filled the pulpit at the First Baptist Church Sunday night.

D. N. and M. R. Inalls, of Denver, Colorado, spent the week end with their sister, Mr. and Mrs. E. E. Degge.

Mrs. Fred Lemons left Wednesday for Las Alamos, New Mexico, to visit her son and family, Mr. and Mrs. Joe Lebons.

Guests in the home of Mrs. J. R. Guest Sunday night were: Mr. and Mrs. Garner Guest and children, of Lubbock, A. J. Jones, Mrs. Dell Sadler, of Dallas, Texas.

Gloria June Stevenson who has been visiting relatives in Yucca Valley, California, is expected home this week.

Mr. and Mrs. Albert Rawland and Mr. and Mrs. Elza Yancey and daughters visited Sunday in Tulia with relatives.

### WARM WEATHER DRIVING TIPS-

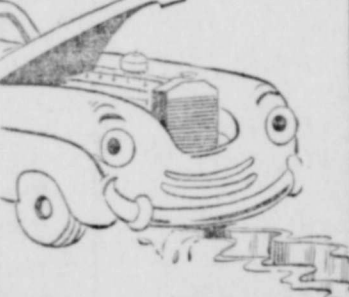

REMOVE ALL WINTER COVERING FROM THE RADIATOR. IN SUMMER YOUR ENGINE'S COOLING SYSTEM NEEDS PLENTY OF AIR THRU THE RADIATOR, OR IT WILL OVERHEAT.

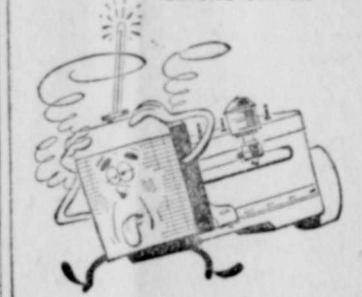

THE COOLING SYSTEM WORKS OVERTIME IN SUMMER. TO BE SURE IT'S AT PEAK EFFICIENCY, HAVE IT CHECKED BY A "COOLING SYSTEM SPECIALIST"—AN EXPERT TRAINED TO SPOT TROUBLE SYMPTOMS AT A GLANCE.

HAVE SUM DRAIN YOUR ANTI-FREEZE—NO MATTER WHAT TYPE IT IS—

WHEN DRIVING, WATCH THE TEMPERATURE GAUGE. A SUDDEN RISE—LIKE A FEVER IN A HUMAN—MEANS SOMETHING'S WRONG. DRIVE SLOWLY TO THE NEAREST SERVICE STATION.

IF YOUR ENGINE IS HOT, DON'T ADD WATER UNTIL IT HAS COOLED OFF—

KEEP YOUR RADIATOR FREE OF PAPERS, RUBBISH, ETC.—A CLOGGED RADIATOR WILL CAUSE THE ENGINE TO OVERHEAT—AND THAT CAN GO ON TO TROUBLE.

## MAGNETIC RECORDING Progress

Valdemar Poulsen Receives Grand Prix

Marvin Camras Invents First Practical Wire Recorder

Surrender on V-J Day Recorded on Wire

Valdemar Poulsen, a Danish scientist, is credited with having invented the first wire recorder. It was a scientific achievement but of little practical value because the playback could be heard only feebly with the aid of ear phones. Poulsen was awarded the Grand Prix for his invention at the Paris Exposition of 1909. For 40 years, other scientists struggled to improve this device. But it was not until the beginning of World War II that a practical wire recorder was invented by Marvin Camras, a young student at the Illinois Institute of Technology. To supply the demand of our armed services, licenses were granted to 48 manufacturers to make wire recorders under the Camras patents. Over 10,000 units were delivered. Since the war, magnetic recording has added tape as a substitute for wire. Today magnetic recording is in use wherever sound recording is required.
