Cotton Defoliating on Minds of Farmers Of Briscoe County

Many Briscoe County farmers are considering defoliating cotton this fall. This has been evident by the amount of interest that the County Agents office has received on this particular item the past few days.

Defoliation of cotton looks promising in a number of cases. But again this practice should be given thought before it is used. There are some extreme precautions that should be observed. Cotton should not be dried or defoliated until there is an actual count of 80 percent of the crop open. In this section of the state, only dessicants are satisfactory for doing the job. These are Pentachlorophenol, and the Arsenicals. These two products kill the entire plant and severe damage may be done if applied before the cotton is mature. They can reduce grade as well as staple quality.

The true defoliates, that only drop the leaves and do not kill the plant have not proved satisfactory in this northern extreme of the cotton belt, according to specialists.

County Agent Ledbetter said that cotton that looked the most promising for profitable defoliation and machine harvest were the dryland cottons and the determinate type irrigated cottons. Varieties that usually come under these are Paymaster 101, Gregg and Macha.

Farmer County Man Reports—

Increased wheat yield 24 bushels per acre

Leon Billingsley, successful High Plains farmer, says: "I applied 100 pounds per acre of Phillips 66 Agricultural Ammonia pre-plant to my irrigated wheat and increased my yield from 18 bushels to 42 bushels per acre. I figure my net profit increase to be around \$40 per acre."

Other successful Southwestern farmers use Phillips 66 ammonia to give them higher grain yields... and more profitable grazing. The 82% nitrogen in Phillips 66 Agricultural Ammonia gives young wheat a fast start, supplies plenty of lush, protein-rich forage that puts on more beef at less cost per pound.

Many of these farmers plow down Phillips 66 ammonia in the fall on maize land. They know that the 82% nitrogen helps decompose crop residue, to provide extra plant food and make the soil more productive. Remember, Phillips 66 ammonia gives you more nitrogen per dollar than any other form of fertilizer—a full 82%.
