

CATTLE MARKET QUIET

WESTERN AND SOUTHWESTERN GRASSERS COMPRISED MODERATE FRIDAY RUN.

COWS AND HEIFERS FIRM

No Change in Bulls and Veal Calves—Stockers and Feeders Slow and Tendency Lower.

Eight hundred cattle were bulletined to arrive here today and about that many came in. The supply was larger than usually arrives on Friday but did not include a very large quota of killing stock.

For the week the beef cattle trade has been mildly uneven. Improvement in the tone of the trade that developed on closing days of last week was continued in the first two days of the current week.

As usual at this season of the year, western and southwestern range offerings comprised the bulk of the week's marketing, both here and at outside centers.

There was practically no change in the price of the week's marketing, both here and at outside centers.

The general market for cows and heifers steered a comparatively even course this week, no material changes marking the current week's receipts.

The following quotations are current on the local market: Choice to prime cows, \$6.25@7.00; good to choice cows, \$5.25@6.25; medium to fair cows, \$4.50@5.25; culls and cullers, \$3.25@4.15; choice to prime heifers, \$7.00@7.75; common to good heifers, \$5.00@6.00; good to fair steers, \$5.00@5.50; fair to good bulls, \$4.25@5.00; veal calves, \$8.50@9.50; medium calves, \$7.00@8.25; common and heavy calves, \$4.50@6.50.

VEAL CALVES

Table with columns: No., Ave. Price, No., Ave. Price. Rows include various calf numbers and prices.

STOCKERS AND FEEDERS

Week-end trade in this division was of any new features, a few scattered odds and ends of light and medium weight stockers selling without appreciable change in prices.

Stockers and feeder values have closed up perceptibly during the latter part of the week, a recession of 15@25c from the improved prices paid during the first half of the week.

As usual at this season of the year, western and southwestern range offerings comprised the bulk of the week's marketing, both here and at outside centers.

There was practically no change in the price of the week's marketing, both here and at outside centers.

The general market for cows and heifers steered a comparatively even course this week, no material changes marking the current week's receipts.

ITEMS IN BRIEF

J. Q. Weller, a substantial farmer, feeder and shipper of Maitland, Mo., sent in a car of hogs for today's trade.

A. S. Mawhinney, rated as one of the heaviest shippers who market at the local yards, was here today, billed from Northboro, Ia.

J. W. Harvey, a successful live stock operator of Osborn, Mo., consigned a one-car shipment of hogs to the local yards today.

Wagner Grain & Live Stock Co., of Bigelow, Mo., increased today's receipts with a shipment of hogs.

Champion Feed saves corn. Wm. Forsen, a well-known farmer and feeder of hogs, was here today with a shipment of hogs.

Try the stock yards lunch at Transit House Cafe. Best meal in the city for the money.

H. E. George, one of the big farmers and feeders of the Plattsmouth, Mo. district, was here today looking after the sale of a car of hogs.

Champion Molasses Feed, cattle like it, cattle feeders like it, because it makes the money. Try a few cars. Champion Feed Co., Tarkio, Mo.

Lon Rice, of Blair, Kan., increased today's receipts at this point with a one-car shipment of good hogs.

For the best values in whiskies, try Higler's 207 So. 4th St. Ketchum, of Edgerton, Mo., a regular patron of this market, had a car of hogs on sale today.

PUMP IRRIGATION USED

MANY ARIZONA, NEW MEXICO AND TEXAS SECTIONS EMPLOY METHOD.

FIRST THOUGHT IMPOSSIBLE

Hundreds of Plants Are Being Installed Where Process Is Found Necessary For the Proper Results.

Deming, N. M., Sept. 20.—It has been the common belief that pump irrigation, so long thought impracticable, is a successful method of furnishing adequate water supply to crops.

There is no other subject of greater importance than this matter of pumping water for irrigation in developing the material resources of the southwest. The irrigation is peculiar in that many of its valleys are watered below instead of from above.

For many years it was considered impossible to do this economically through a water pump. The modern pumps of high efficiency have been devised and the internal combustion engine has been perfected, furnishing cheap power, and central power plants distribute electricity for pumping water extremely remunerative.

One of the first districts in New Mexico to take the matter of pumping water for irrigation seriously was the Deming district. In the vicinity of Deming, in the Mimbre Valley, sand and gravel strata carrying water in inexhaustible quantities occur at depths varying from 20 to 200 feet. This water comes from rains and snows which fall upon the vast mountain ranges to the north, and sink into the valleys, where the river leaves the mountains. The first water-bearing stratum is encountered in the town of Deming at about 45 feet. This stratum is a shallow east of Deming until, about 10 miles out, it rises to within 15 feet of the surface.

The pump has even invaded the great big mining districts. Hereford great progress is being made in developing the underground water by means of pumping plants. In the vicinity of Roswell, N. M., great tracts are being developed by means of the pump, where only a few years ago these lands were worthless land that now sells at the market from \$200 to \$300 per acre.

Wanted—at once, man and wife to work on ranch in central Kansas. Inquire Drinkard, Emmert & Co., Live Stock Exchange Building.

FOR LAND CONGRESS. St. Joseph Is Invited to Send a Delegation to St. Louis Convention.

R. T. Forbes, president of the Commerce Club, has received literature advertising the Missouri National Land Congress and Exposition in St. Louis, Oct. 14-19, and asking that St. Joseph send a delegation.

APPLE STORAGE

If you have apples to place in cold storage, address O. A. Keyes, So. St. Joseph, Mo.

LONDON STATUES PUZZLING

Foreigners Have Difficulty Solving City's Mementoes. London, Sept. 20.—The intelligent foreigner who visits London must frequently find himself puzzled by the many statues which he comes across in the parks and public squares.

HORSE AUCTION POSTPONED

Regular Sale Put Off Until Next Friday, September 27. Light receipts of horses at the local yards, except for a small quantity, the activity of country buyers in sections infected by the fatal horse disease resulted in a postponement of the regular horse auction until next Friday, September 27.

WHOLESALE BEEF PRICES

Following are today's wholesale prices for beef cuts as given out by Swift & Company: Dressed Beef. No. 1, No. 2, No. 3.

FROM CHICAGO TERRITORY

Hogs Here Today From Points East and North of Des Moines. The Chicago Great Western R. R. brought in this morning several loads of hogs originating at points north and east of Des Moines in Chicago territory.

THREE MEN INJURED

Triof of G. W. Wrecking Crew Hurt When Chain Breaks. Three members of a Chicago Great Western wrecking crew were injured, one seriously, in an accident caused by the breaking of a heavy log chain being used in lifting a derailed engine on the tracks at an early hour this morning.

WEATHER FORECAST

For Missouri: Showers this afternoon or tonight, cooler; Saturday fair, cooler in east portion. Kansas: Generally fair tonight and Saturday; cooler tonight, with probably frost in north and east portions. Nebraska: Fair and cooler tonight; frost in east and west; freezing temperature in west portion; Saturday fair.

STOCK YARDS DAILY JOURNAL

The St. Joseph Journal Publishing Co., Publishers.

W. E. WARRICK, Editor and Manager.

Largest Outside Circulation of Any Paper Published in Buchanan County, Mo.

Entered at the Postoffice in St. Joseph, Mo., as Second Class Matter, September 3, 1897.

Subscription Rates: Daily, per year \$4.00; Daily, six months \$2.00; Daily, three months \$1.00; Daily, one month .40; Tri-Weekly, per year \$1.50; Semi-Weekly, per year \$1.00; Weekly, per year .75.

In making change of address, please state your former postoffice. State whether your paper is Daily, Tri-Weekly, Semi-Weekly or Weekly. State whether you pay for it, or some live stock commission firm, and if the latter, the name of the firm.

Country subscriptions are payable in advance. Do not send checks on country banks. Remit with postal order or draft, payable to St. Joseph Journal Publishing Company.

If you do not receive your paper regularly, notify this office or your commission firm, at once, so the matter may be rectified without delay.

Advertising Rates Furnished on Application.

Deal 20 per cent commission allowed postmasters, who are authorized to take subscriptions.

LUMBER PRICES CLIMBING.

Scarcity is the assigned cause of elevating cost of lumber. That commodity has advanced in price an average of \$5 a thousand feet since last January. It is predicted the prices will ascend another \$4 a thousand by next April.

All of which is cheerful (?) news for farmers contemplating making improvements. Big crops and revival of business following several years of liquidation are the causes for the increased demand.

Orders for lumber come from abroad and from big cities of this country where there is a decided revival in building. Demand for railroad car material is heavy. The small lumber yards are receiving orders from the farmers for houses, barns and added improvements of all kinds.

The building of silos, which has come to be very popular among the farmers, is calling for a great deal of lumber. The substituting of wooden block paving for brick and asphalt also is adding to the demand.

THE PROVISION SITUATION.

W. G. Prosser & Co., say of the provision trade situation:

The partial assurance of the making of one of the biggest corn crops this country has ever had, no doubt has created a bearish sentiment in pork products, and were the supply of hogs ahead anything more than normal this year, this bearish sentiment might be well founded.

With a big corn crop it is reasonable to suppose that the early part of the season will find receipts of hogs less than normal. Cheap corn will delay the receipts until late in the winter and there will be no accumulation of lard or ribs going on until after January.

MODERN "PLAGUES OF EGYPT."

We are assured on the authority of the Book of Exodus that God punished the tyrant Pharaoh and his people in a way quite in harmony with modern science. We have not yet found that the frog secretes in his clean, though slimy person, any microbe or germ—but maybe he does.

This is all in a rough sort of way in accordance with what we know of the manner in which small animals and insects spread disease. The fly spreads typhoid, and other diseases.

Daddy's Bedtime Story

The Fairy Castle by the Seashore

THE seashore? Daddy was charmed to hear that Jack and Evelyn were to be taken there by grandma the next day. "I hope you'll have a jolly time," said daddy. "When the other things no longer amuse you, you can build a fairy castle out of the silver sand."

"There was little Marjorie. When she went down to the shore she had a nice new spade and set of molds with which to play in the sand."

"I'm going to build a nice sand castle, like the one I saw in the picture," little Marjorie said to her nurse. "Very well," replied the nurse. "I'll sit down and rest on that rock while you're building it."

"So Marjorie started to work with a will. Soon the white sand was flying right and left. "Marjorie made a lovely castle, with tall towers and windows and nice doors, and then she built a wall on whose sandy sides she stuck shells."

"Now, I'll dig the castle well," she said, and she dug a sand bank to rest and watch the waves for a few minutes.

"As she watched them, one wave larger than the others curled right up to the castle and broke over it."

"Marjorie thought that would wash away the castle, but she was surprised to see that it now began to grow until it was as tall as a real castle. A little green lady with a tall like a fish stood at the door and beckoned to her."

"Now, Marjorie remembered that in the last fairy tale she had read it said that the little mortal child must not go into the fairy castle by the sea, or she would become a little green mermaid and have to live there always, going swimming instead of walking and eating sea food instead of pie and cake and good things of that sort."

"Marjorie was hungry, real hungry, and so she shook her head when the little green maiden beckoned. Then splash! a strange thing happened. The big silver castle shrank till it was lost in the sand and the little green maiden, with a scowl on her lovely face, skipped back and slid into the sea."

"Wake up, Marjorie," said her nurse, "the tide's coming in and it's time to go home for lunch."

"Marjorie rubbed her eyes sleepily. Then she sprang up. Sure enough the castle was gone, the little waves trickling over the place where it had stood as the tide ebb'd out."

There is a fly—the tsetse fly—which gives to live stock in a large part of South Africa a disease which makes farming there an impossibility. It is caused by a germ which lives in the fly and passes with its bite.

One kind of mosquito is responsible for all the malaria—"chills and fever," "fever and ague," "intermittent fever" and the like—from which poor, shivering, burning humanity ever suffers. Another is the sole agent for the spread of yellow fever.

A wood-tick causes the Rocky Mountain "spotted fever" from which Doctor McClellin recently died—but the tick has to have the aid of ground squirrels, chipmunks, rabbits, rats, mice or some other small animal in its life cycle. So both tick and rodent are our enemies.

A kind of tick causes the "Texas fever" in cattle on the eradication of which the government has spent millions. That dread disease pellagra is thought by some to be communicated by the bite of some insect—perhaps some sort of gnaw or sandfly. The most dreadful plagues and diseases of all human experience are spread by fleas, mites, bedbugs, ticks and mosquitoes. Some of these are spread by direct contact with the insect, some through the assistance of small animals. Of all these animals, the rat is the worst enemy of man.

Through his devilish operations we are all the time threatened with disease. Rats spread bubonic plague through their fleas. Other rodents aid in this, but the rat, sailing in ships, and passing from continent to continent, is the worst.

Trichinosis in pork comes from rats. The tapeworms which infest man and others which infest live stock come from rats. Pneumonia is spread by rats. So are cancer and leprosy. A sneaking beast which runs from house to house in spite of quarantine cards must spread other diseases.

Altogether, the rat invites our serious consideration. He isn't mentioned in Exodus in connection with the plagues of Egypt, but it's a perfectly safe bet that he helped the lice and fleas to spread the infection of the "boils and blains." If the human race is ever exterminated, these creatures, small and minute, will be the great exterminators.

ADVOCATES A SHORT CANAL

State Geologist Would Connect Tennessee and Tombigbee Rivers.

Jackson, Miss., Sept. 19.—When Dr. E. S. Lowe, a geologist, advanced a theory about diverting the overflow of the Tennessee river so as to make an alternate waterway to Mobile Bay his plan was so different from anything heretofore considered that it was considered visionary.

WOMAN WINS WITH FRUIT

Twenty Acres in New Mexico Contains Paying Apple Trees.

Albuquerque, N. M., Sept. 20.—How determined New Mexico is to pocket change, has brought success and fortune to a New Mexico woman, is told in the history of the experience of Clara D. True of San Ildefonso Precinct of the Santa Fe country, in fruit growing on a ranch.

Miss True was formerly a teacher in the Indian service, and the woman who was chiefly instrumental in bringing about the investigation which led to the transfer of former Sup't. Crandall from Santa Fe to South Dakota. This story, however, has nothing to do with the merits of that controversy, although it may be said in passing that Miss True's activity in that connection was typical of the determination which has brought her success in horticulture.

Miss True, accompanied by her partner, Miss Bryan, was a visitor in the city yesterday and a series of questions drew from her the interesting story of her experience in raising apples in New Mexico.

Twenty years ago Miss True came to New Mexico, accompanied by her mother, whom she was supporting, and her brother, who was a student at the city yesterday and a series of questions drew from her the interesting story of her experience in raising apples in New Mexico.

Not to go into details too much, Miss True got a situation and gradually accumulated enough money to take up a little land in Santa Fe county. She was not afraid to work, and had some pretty good ideas about looking after the orchard.

She worked as a teacher in the Indian service, her unpretentious salary proving of assistance in taking care of her mother and gradually getting on her feet. "On the land," she said, "I have 200 acres of ground in San Ildefonso Precinct and by careful management and hard work, with her partner in making money. It is understood that if necessary one of the plain little checks bearing the simple legend, Clara D. True—'Fruits,' might be filled out for five very substantial figures.

"I have twenty acres in apples," said Miss True. "Last year I secured a yield of a carload to the market. For these I got from \$300 to \$1,000 a car. They are good apples, because I have worked to make them so, and am prepared to work for whether it be frost or otherwise. Provided you do a little thinking and try to keep up with modern orchard methods, there are no apples in this country adapted to successful fruit raising than New Mexico. I have had little trouble of a serious nature so far. I had smudge some early last spring, but there was no frost. This year I have set out fifty acres in winter apples which ought to be bearing in two years. Property that cost me \$25 an acre five years ago will bring \$50 an acre now. I have refused that much for it. One piece for which I paid \$6,000 six years ago last year furnished crops worth \$10,000, or \$100 an acre, 10 per cent. So you see what careful horticulture will do for New Mexico land."

Miss Bryan, whose assistance to Miss True has been invaluable in the raising venture, used to be a teacher in Philadelphia and came to New Mexico from Pasadena.

Her husband is in New Mexico in California as far as the returns go," she said. She is equally as enthusiastic for the raising of apples in New Mexico opportunities as Miss True.

"Miss Bryan and myself, my mother and one other woman are the only women in the women's precinct," said Miss True. "I suppose we pay more taxes than the rest of the precinct, without a corresponding voice in the government; but then I am not kicking. I am not a suffragette. I don't believe a woman has to have the ballot to make her way in this world—in New Mexico, anyhow."

A CATFISH THAT BARKS.

Oklahoman Has a Nature Fake to Show T. R.

Vinita, Ok., Sept. 20.—Scott Thompson is the luckiest and most truthful fisherman in these parts. This week Scott came in from the Spavinaw with an eel which was attached to 13 rattles and a button, all of which may now be seen on exhibition in the front window of a local drug store.

The queer story about catching this freak eel. He had baited his hook with rooster gizzard and was smoking his pipe, half asleep, when he heard a peculiar noise, a gurgle and splash down a drain pipe. He shifted his pipe. Then his cork bobbed under. He was fearful he had hooked into a snake, then he saw the eel and slashing the water. The eel hitched itself around a dead limb and began making a noise with its rattles.

Thompson saw long, dark objects speeding in every direction in the shallow water and hiding under the rocks. Thompson believes the fugitives were eels that had learned to hide out at the warning signal given by the eel with rattles. He says that when he tried to take the eel off the rattling noise was loud and he thought the eel in a sick and brought it to Vinita. He intends to show the eel to Roosevelt when the Colonel comes to Oklahoma this month.

But Thompson relates another experience more remarkable than the catching of the eel. This happened on Four Mile Creek. Fish were being hooked. Suddenly, there was the greatest commotion among the perch and crappie. There was a jerk on Scott's line and when he pulled a peculiar gray catfish struck the bait at his feet. Then Thompson's hair stood up. The catfish began barking like a small dog.

Thompson did not have the heart to kill the fish, so he took it home and said today that he had it in captivity in a tub of water out by his window.

This fish has betrayed unusual intelligence. It recognizes Thompson.

START RATTLESNAKE RANCH

West Virginia Company Formed to Raise Reptiles for Skins.

Berkeley Springs, W. Va., Sept. 20.—With enormous profits as an incentive, Colonel F. W. Brown and George S. Ziller of this section, have formed a stock company to engage in "rattlesnake culture."

According to Colonel Brown, the demand for rattlesnake skins is greater than the supply. When tanned the skin of the rattler makes a superior grade of leather for purses, belts, women's footwear and toilet accessories.

An immense tract in the mountains above here, where the snakes thrive, has been bought by Colonel Brown.

To Our Out-of-Town Customers Have Your Fall Suit Tailored to Order Here

We have a master tailoring service in our store now. It is no longer necessary to pay a high price in order to get a perfect-fitting custom-tailored suit. You can come into our store, select the material you wish from 500 handsome Autumn fabrics, choose the style you wish from sixty-nine new fall models.

Satisfaction Guaranteed

We will take your measure and GUARANTEE TO DELIVER A PERFECT FITTING, FAULTLESSLY TAILORED SUIT, made as you have ordered it in every detail.

The prices we ask for these splendid suits made to order are so low as to appear almost ridiculous—the cheapest of ready-made garments can hardly be bought at such figures.

Suits to Order Complete

Table with 2 columns: Price Range and Material. Rows include: From \$1.00 Material, \$18.50 and Up; From \$1.25 Material, \$19.75 and Up; From \$1.50 Material, \$21.00 and Up; From \$2.00 Material, \$23.50 and Up; From \$2.50 Material, \$26.90 and Up.

Above prices are good for the balance of September.

N. B.—You can get one of these suits without leaving your home if you wish. If you find it impossible to come to town, write us for samples of the materials desired, ask us for illustrations of our styles, and we will give you full instructions as to how to take your measure, how to order, etc., and deliver the suit promptly, fit and workmanship both guaranteed, the same as if you had come in here and ordered it.

You'll pay more than these prices for a Fall Suit anyway, why not have us make you one to measure—and GET THE BEST.

\$45,000,000 LOSS IN EGGS

Government Recommends That Roosters Be Segregated After June 1.

Washington, Sept. 20.—The agricultural department has compiled statistics to show that \$45,000,000 worth of eggs are lost each year through being allowed to spoil.

The department and the government experts suggest that a little better management by farmers would save most of those now going to waste and if these were added to the present supply it would reduce the price about a cents a dozen without curtailing the income of the farmers.

To make the eggs less likely to spoil it is suggested that the roosters be segregated after June 1. A fertile egg spoils much sooner than one not fertile.

A table of prices of eggs since 1900 shows how steady has been the rise:

Table with 3 columns: Year, Low Price, High Price. Rows include: 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912.

The government report strongly recommends "candling" all eggs and guard against letting bad eggs slip in among the good ones.

The loss of insects is increased annually by the addition of about 8000 specimens.

TRANSPLANTING ONIONS.

This Plan Proves Best in New Mexico Experiment.

State College, N. M., Sept. 23.—On account of the value of New Mexico's onion crop, much experimentation has been effected, with satisfactory results. The experiment station has conducted experiments in the growing of onions by transplanting from a seed bed to the field and by planting the seed in the field where the onions were to grow, and when large enough thinning them in the row to the proper distance. It has been found that everything considered, the transplanting plan is the best and most economical. The thinning of onions in the field beds is exceedingly tedious and expensive, under our method of irrigation. Aside from the extra work and cost of thinning, there are always considerable more weeds in these beds, which make it necessary to start weeding earlier and more frequently. In the germination of onion seed under field conditions there are always a few places, though small they may be, where the seed fails to come up. In these vacant places onions must be transplanted, in order to have a uniform stand in the row.

In order to grow onions by the transplanting method the seed must be started in the fall or winter. The best period of seeding is comparatively short. That is to say, if the seed is planted too early, most of the plants will go to seed the following summer. If, on the other hand, the seed is planted too late, the young plants will not be large enough for transplanting at the proper time in the spring. The best period of seeding has been found to be, at the experiment station, from about the 20th of September to the 10th of October. The practice at the station is to plant the seed in the field seed bed about the last of September. This period of starting the seed may vary a little, according to the altitude and climatic conditions in different parts of the state. The grower should, however, keep in mind not to start the seed too early or too late or else the plants will either go to seed or not be large enough for transplanting at the proper time in the spring.

The preparation of the seed bed is of much importance. The land should be plowed thoroughly and disked or sowed, if necessary. It should be got as level as possible. It is best not to have the beds or plants too large. If the soil is somewhat light, it is advised that a light dressing of well-rotted manure be put on it and be disked in before the seed is planted. The seed can be drilled in rows about 4 inches apart. This is best done by using a garden drill, such as the Planet Junior. Great care should be taken in regard to the depth. If it were possible under field conditions, it would be best to have the seed about one-half inch in depth. Since this is a hard matter to do, three-quarters to an inch depth should be the limit. Immediately after planting the seed it should be irrigated, to produce germination. As a rule, another irrigation is given the plants while they are coming through and before germination is completed. During the winter two or three irrigations may be given the seed bed. The number of these irrigations will depend upon the winter—whether it is dry or wet. If the germination were ideal and everything went on all right during the winter, we could probably count on 2 pounds of seed producing enough plants for one acre; but to be on the safe side in practice we usually count on 4 to 5 pounds of seed. The winter temperatures in the Mesilla Valley do not injure the little onion plants. During the last two winters they have stood a zero temperature without material injury.

In the Mesilla Valley it is the practice to transplant from the lot to the 15th of March. Transplanting at this time gives the best results. The later the transplanting is done the poorer the results. The old rule in regard to the proper size of onions for transplanting was that the onion was ready for transplanting when it was as large as a pencil. This rule does not have to be followed in the transplanting of this crop in this climate, as all of the onions are transplanted before they are that large. Oftentimes when they are not more than twice as large as a toothpick.

LEARNING MORE OF AMERICA

Automobile Doing Much to Bring City Folks to Country.

To the man who loves the out-of-doors, the towering mountains, low sweeping plains, the fascination of speeding over smooth country roads, up hill and down dale, reeling off mile after mile with an exhilarating wind whipping him in the face, the approaching fall, with its crisp and wholesome air, and its kaleidoscopic hues of foliage cannot but appeal. While years ago driving was increasing in volume it is the autumn months that bring the motorists out in great numbers.

The motorist who tours knows the keenest joy that comes from the possession of a reliable car. He knows where nature does her brightest array or performs her greatest wonders; he knows the quiet inns where mine host set forth his larder's best; he knows the industries of one city, the galleries of another; he knows the stream where the trout rises swift to the fly, the field where the quail whirrs at the pointer's flush; he knows the links where hazards make the gamblers' stakes—yes, he knows all of the out-of-doors.

Thousands of Americans never knew their country until the coming of the motor car. Its Swissers, its Rhinelanders and its Italian jakes, were sung only in the prose or verse of pioneers, who by the wagon trail, on horse, or in canoe had penetrated regions fair as the continent of the best can boast.

The owner of a thousand dollar car may today spin through regions unknown to his grandfathers, or vaguely imagined from guide book description or trapper's tale. Borough, township, state or nation have joined hands in a country-wide movement to lay down roads adequate for motor use. Highways have been pushed through wilderness of rare beauty, beside romantic streams, over crazy mountains that test the daring of driver and construction of car.

From steam train window, the traveler might catch a mile-a-minute glimpse of mountain valley or plain; but the spirit of discovery, the impulse to go into the back country, to know its quaint byways, its hills and dales and bubbling streams, to smell the fragrant perfume of nature's foliage, came with the automobile.

Certainly no other factor has contributed so largely to the general knowledge of beauties that exist over a greater area than under any other single flag in the world. Small excuse is there for the motorist to confine his pleasure to city pavements, when half an hour or less will bring him into shady country lanes, past waving verdure, where bright germ-destroying sunlight abounds and life-giving clean air brushes the cobwebs of care from the jaded brain and fagged system. It has been said that God made the country and man made the city, but the motor car has brought the two together.

DISEASE GERM FOUND.

Kansas Scientists Discover Horse Malady Cause.

Hoxie, Kan., Sept. 19.—The germ that causes the horse disease has been found and the scientists of the Kansas state agricultural college who are conducting a laboratory here believe they have a serum that will immunize horses against it.

The discovery of the germ which the specialist says has been found in the brain of every horse that died from the disease examined here positively identifies the horse plague as Borna's disease, a form of spinal meningitis well known in Germany, but never before recognized in this country.

The agricultural college officials say the experiments with the serum prepared from the germs isolated have not been carried far enough to make extravagant claims for it, but that it has been tried on several herds of horses and in every case the disease appeared among horses not inoculated.

Following are the results up to date: Horses vaccinated the first time: 1. Horses taken sick with the disease after the first vaccination, 16. Time between vaccination and sickness in these 16 cases, one to four days.

Horses that died after vaccination: 2. Time after vaccination before death, one to two days. Horses vaccinated second time, all of which are well, 160.

The fact that sixteen of the horses developed the disease after vaccination, and that all but two of them recovered, is taken to indicate that the bacteria treatment is effective, as the percentage of recovery ordinarily is only about 10 per cent.

Another encouraging thing is that in several large herds of horses, part of which were vaccinated, the disease has appeared among those not vaccinated.

BOYS IN DEN OF SNAKES

Twelve-Year-Old Companions Kill Reptiles and Escape.

Altoona, Pa., Sept. 18.—Rambling over the mountain at Point View, a summer resort eighteen miles south of Altoona, Herbert Ritchey and Robert Dillon, each aged 12, of Altoona, found themselves in a den of copperheads. They were literally surrounded by the deadly reptiles, and were having their sun bath disturbed. Being armed with clubs for just such an emergency, the boys began to fight their way out, not knowing how

"GETTING ALONG SIMPLY FINE"

St. Joseph Lady Relieved After Nine Years of Suffering.

The United Doctors Remove the Cause—All Pain and Distress Disappear.

Many patients come to the United Doctors whose only relief at times has been morphine or some other narcotic which simply dulls the senses to pain but does not cure, only to find that a short course under the United system of treatment has removed all the distress and weakness in a natural manner. They are like new beings, and are astonished almost beyond belief at the wonderful change. "Why I hardly know myself any more," said a patient in the reception room the other day. "From a puny invalid I am now a healthy woman doing my work and enjoying my family again."

So say hundreds who have found this treatment and know. A St. Joseph sufferer nine years from a trouble which the doctors failed to find the cause of, or a remedy for. Read her own statement as to what happened when the United Doctors properly diagnosed her case and applied the correct treatment. St. Joseph, Mo., Sept. 15, 1912.

To all sick people: I have been suffering with gallstones for nine years, causing severe periodic attacks which would prostrate me in bed for several days at a time. It was pronounced congestion of the stomach by some doctors; cramps of bowels by others, and no treatment that I took seemed to be of any benefit. At times I had to be relieved with hydropic doses of morphine, the pain was so terrible.

The United Doctors examined me on July 15th and called the trouble gallstones, and they explained things so plainly that I commenced their solvent treatment at once. Well, I am getting along simply fine under their care. I have not had a single attack since taking the first dose of their medicine, and hardly know I ever had gallstones. I have a little trouble in my back yet but am rapidly improving in every way, and what week I did my own washing for the first time in over a year. I am living near the Detention home, St. Joseph, and will be glad to tell anyone what is being done for me by the United Doctors.

MRS. L. VONDERHEIT. Curable diseases of stomach, liver, kidneys, blood and nerves often disappear almost magically under the solvent, soothing methods of the United Treatment. This is a result of certain and surprising in all accepted cases of indigestion; gallstones, dyspepsia, rheumatism, neuritis, bloating, gas in the stomach, weakness and run-down conditions; lack of ambition, eczema, gout, epilepsy, asthma, diseases of women and diseases of men.

The only place in Missouri where the United Doctors can be seen is at 728 Felix street, second floor. There are no traveling agents or doctors on the road representing them. Often only one visit to the office is necessary, as the United treatment is used for the most part in the patient's own home.

For Horse Owners

For 25 years I have studied the common and epidemic diseases of poultry and stock. I am not a graduate veterinarian but have learned some things through long experience, careful observation, and a heavy correspondence. I am in almost daily communication by wire, phone or letter with every town in the infected territory. Such commercial preparations as I have designed have met with wide success and popularity.

The new horse disease is variously diagnosed but seems to be uniformly fatal unless taken in hand at the first moment of noticeable infection. It is certain that the animals receive the infection through mouth, nostrils or ears.

Knowing as little about the origin of this disease as do all others, at this time, I would recommend, from my experience in combating other epidemic diseases of Stock and Poultry, the following: Germozone, given in water, kills germs in the water or in the food previously taken. It is antiseptic, destructive of many fungus and organic poisons, and has gained a national reputation as a remedy for Stock and Poultry. It is also a bowel regulator.

Flyo-Curo is a compound of refined Paraffin, Pine and Cedar Oils and keeps flies and mosquitoes from stock. Give Germozone in all drinking water when disease is active nearby, one to two tablespoonful to a pail of water. As an additional precaution, apply Flyo-Curo once or twice a day to the animal's face, nostrils, lips and ears to keep off flies that may carry the infection. In case the disease appears, supplement this treatment with a rectal and nasal injection of Germozone, a tablespoonful to a quart of water.

We have over 2,000 dealers in Nebraska, Kansas, the Dakotas, Iowa and Missouri. Those in infected territory report almost no new cases of the disease when using above method of prevention. Our factory is working over time in supplying rush orders by mail and by wire.

Germozone costs but 50c per 12-oz. bottle. Flyo-Curo is 35c per quart can. The cost of prevention is small. I will stake my reputation that few cases of any infectious disease will appear in animals receiving daily the treatment of Germozone and Flyo-Curo as directed.

Made and Distributed only by GEO. H. LEE CO., Omaha, Neb.

Many other reptiles might be in the immediate vicinity. The snakes fought back and for a little while it was not quite sure which side would finally win; but after ten of the enemy, ranging in length from twenty-two to thirty-six inches, had been slain, the others disappeared in the underbrush.

A movement is on foot to eliminate the adulteration evil of the silk trade by weighing

CORN CARNIVAL ORATORS. Atchison, Kan., Sept. 29.—For the Corn Carnival, the Progressives will have Senator Clapp or former Senator Beveridge as a speaker. The Democrats expect to get Woodrow Wilson, as the date coincides with his western trip. The stand-pat Republicans have not made any effort to present an orator of their faith.

The British Patent Office receives 30,000 applications per annum.
