Do not send checks on country banks. Remit with postal order or draft, payable to St. Joseph Journal Publishing Company.

Advertising Rates Furnished on Application. Send 25 per cent commission allowed publishers, who are authorized to take subscriptions.

ONE CAUSE OF MEAT SHORTAGE.

The Cateer: The shortage of beef cattle in this country is more largely due to the slaughter of calves than to any other single cause.

It is unprofitable to allow a calf to eat the valuable fluid that is producing 30 cents to 40 cents per pound butter.

The tendency to this too early slaughter of calves caused the enactment of the various "hog-veal" laws of the several states.

Veal is really unfit for human food. Baby beef is also unfit. The government should, for the sake of the hard-working digestion of man, prohibit the killing of calves or any other bovine meat under two years of age.

Even two-year-old beef is, in a sense, baby beef. Such beefs would weigh about 500 dressed, while the calf only weighs about 90 pounds dressed on the average.

Though about 4,000,000 calves are slaughtered annually for food, only about 600,000 of these are slaughtered in Chicago.

Daddy's Bedtime Story

The Leaves That Unfolded Too Soon The Leaves Were Nipped by Frost.

The trees were wearing nice new suits of spring green. Daddy had told Jack and Evelyn all about them. "But once," said daddy, "there was a little branch that was terribly in a hurry."

"That branch liked to be first in everything. So when Mother Nature said to the trees: 'Now, children, get ready for spring. Quite soon you may wake up, and every bough may tell its tiny leaves to rise out of the little cradles in which they have been sleeping all winter.'

"When the trees told this to the boughs and the boughs rustled it to the twigs and the twigs whispered it to the sleeping leaves there was great joy in the forest, for they all loved the beautiful summer, with its sunshine and gentle rains, and they disliked the dark, bitter winter, with its cruel winds and sleet.

"But this little brown bough, who always liked to be first in everything, said to its listening twigs: "Do not forget. We must be the first in the forest to unfold our leaves to the sunshine." And so the leaf babies grew and grew in their little cradles as the tree sent up the nourishing sap which the roots drank in from the ground.

"The days grew milder and milder. At last the tree said that in a few days perhaps the leaves might come out. "Hurry up," the bough said to its little twigs. "Stir up the little leaves so that they will awaken on the first warm day. We want to beat every other bough on the tree."

"The very next day it was unusually warm, and the little twigs said to the bough, 'Shall I be today?' "No, a bit of harm," the bough said to himself. "The tree is sure to say go ahead." So he told the twigs to tell the leaves they could come out into the sun.

"So the little baby leaves began to unfold and lift their little heads in the warm sunshine. "And when the tree noticed them it said to the forward bough, 'Why didn't you wait till I told you to go ahead?' "Oh, dear, I knew very well we should hear from you soon," airily replied the bough, "and I thought we might just as well get up a little early."

"And that very night it grew cold and still colder. By morning there was a frost, and all the tiny baby leaves had their little heads tipped so that they drooped and never were able to hold them up again. Then the little bough shivered and sighed, for it knew that the leaves would wither and all summer, when other boughs were shaded by beautiful green leaves, he would stand bare and leafless."

The feed yard introduced seemed to overcome all fear—and his appetite only was consulted. These range steers almost from the start showed such astonishing gains that all prejudice was soon removed.

The range steer of today, however, is a very different animal from the range steer of twenty years ago. The feeder now sends in his order to his commission firm at the market centers where these cattle congregate and receive a well-bred, high-grade animal that compares favorably with the best native stock of the country.

These range cattle have passed through the improvement process that has been steadily at work during all this time, and they are distinctly a type easily traceable to one or the other of some of the popular beef breeds of cattle.

The demand for good, high-class bulls for the range should not cease, and no better lesson can be taught the range cattle than a visit to these big shows, where the carload exhibit of range cattle is made a special feature, where his own kind of production is being put before the public in such a strong and forceful demonstration.

The difference between the well-bred range cattle and the poorer quality is as distinctly noticeable as the difference between the best pure-bred bull and the less desirable. Quality is what counts with the producer of meat animals today, just as results are what counts with the business man in the operation of his trade today.

BIRDS THAT CATCH FLIES

Department Studies a Species That Labors for Humanity. The agricultural department in a special bulletin issued a few days ago describes the good work of the family of flycatcher birds.

The contents of 3,338 stomachs were examined and they showed an average of 9.91 per cent vegetable and 94.99 per cent animal food. The animal food consists of insects, and those caught and eaten by the birds were almost exclusively of harmful species. Seventeen species of the family of flycatchers were studied, examined, and reported upon.

The moral is to be good to the flycatcher, for it is the friend of the farmer. Besides, the birds have appetites that keep them nearly all the time at work exterminating insects which are harmful to the crops and annoying to human kind.

In addition to preying upon insects, the biological survey also points out that the birds are very courageous, and as a rule will attack large predatory birds, and thus protect the poultry yards from such pirates of the air as hawks and crows.

GERMAN MEAT GOES UP.

Wheat, Rye and Other Necessities of Life Also Are Extremely Costly. Berlin, Oct. 14.—Germans are now paying for all kinds of meats, wheat, rye and several other necessities of life prices higher than are paid anywhere else in the world.

The number of horses slaughtered for meat in Berlin during the first six months of the present year reached 5,242, and exceeded the figures for the corresponding period of 1911 by 1,463.

The Germans ate 43,752 tons less of beef in the first half of this year than in 1910, and paid \$5,750,000 more for the smaller quantity. Dressed swine are bringing more than 18 cents a pound at the abattoirs, and more than half of all the meat

60,000 ACRES TO SYNDICATE

Big Panhandle Tract Will Be Cut Up and Put Under Irrigation.

Plainview, Tex., Oct. 13.—Dr. F. S. Pearson of New York and the British syndicate with which he is associated in varied industrial enterprises in Mexico, Brazil, Spain and other countries, has purchased 60,000 acres of land near here. Plans have been adopted for placing this entire tract under irrigation.

The land is situated in the shallow water belt of the Panhandle. During the last two years many shallow wells have been bored and an abundance of water obtained for irrigation at depths ranging from 80 to 300 feet. The land purchased is in its primitive state and has never been under any irrigation. It is known, however, that water may be obtained on every part of it from wells. Each well produces water for irrigating 100 to 150 acres of land. The water is brought to the surface by means of pumps operated by gasoline, steam or electricity.

The Pearson syndicate will install a large electric power station upon its land and operate the pumps by that means. The land will be divided into tracks of 50 to 200 acres each and a farmer placed upon each subdivision. The syndicate paid \$1,500,000 for the land and the proposed improvements, according to the syndicate, will cost in excess of \$2,000,000. The entire property is to be brought up to the highest state of production.

One scheme is to convert 10,000 acres into an apple orchard. The trees will be planted this fall. Alfalfa will also be in it as quickly as the soil can be prepared. In order to ascertain exactly what products are best adapted to the soil and climate an experimental farm of 400 acres will be established.

Other crops in this section are growing chiefly wheat, milo maize, kafir corn, cotton, apples, peaches, cherries, and other fruits, watermelons, cantaloupes and all kinds of garden truck, especially sweet potatoes.

Ten years ago this land and other ranch property in this part of the Panhandle could have been purchased for \$1.50 to \$2.50 an acre. Not until three years ago was it known that this section, as well as the territory south of here for 200 miles for a width of 100 miles, is underlain with an inexhaustible ocean of pure water. This discovery, together with the development of the dry farming idea, have enhanced many fold the value of the ranch holdings in this section.

Several railroads through the region during the last two or three years has been a development factor. The Pearson syndicate in connection with its irrigation project, will build a railroad from El Paso to Plainview, 350 miles. This road will connect with the existing lines at El Paso, which line is owned by Pearson interests. It is said this railroad will ultimately be connected with the railroad system which Pearson and associates are planning to build by their reorganization and completion of the Denver Northwestern Pacific.

The Pearson syndicate is investing money in the construction of several railroads through the region during the last two or three years has been a development factor. TURN DESERTS TO GARDENS Irrigation Projects Under Way in Texas Involving Over \$30,000,000. Fort Worth, Tex., Oct. 15.—The general public likely has heard vague rumors that French engineers are to irrigate and make fertile the great Sahara Desert. And most people undoubtedly believe the task stupendous and the expense enormous.

But right here in the United States we are today transforming deserts into fertile farming lands, thereby solving the problem of supply and demand, the problem of high cost of living, the problem of finding a place for everyone, without overcrowding the country.

Over in Texas different irrigation projects are under way which involve \$30,000,000. At least half a dozen of them already are complete two of the most important being the Pecos Valley and the San Benito system. The Medina project south of San Antonio, when complete will have cost \$2,000,000. These different systems will save to the United States and make fertile 4,000,000 acres of land.

And the greater part of this land was like the Sahara. Desert. It was wholly uninhabited. Nothing grew upon it but cactus. The horned toad and lizard were its only inhabitants. This land ten years ago sold for a half dollar an acre and the price was considered high. No one would have it. Make such land a farming country? Absurd!

But a few daring yet businesslike men with capital, ambition and expert engineers came to the rescue, and executed irrigation plants and lot the whole country is transformed into a verdant scene. Farmers by the thousands are pouring into the Southwest and taking up land.

Corn in Iowa, the best corn state in the Union, is high at eleven and twelve feet in height. Nothing grew up on it but cactus. The horned toad and lizard were its only inhabitants. This land ten years ago sold for a half dollar an acre and the price was considered high. No one would have it. Make such land a farming country? Absurd!

TO KEEP FARMER ON FARM

This Will Be Big Topic of Kansas Agricultural Congress. Hutchinson, Kan., Oct. 15.—Kansas is going to tackle the farm problem from a new angle when the Kansas Agricultural and Industrial Congress meets here Nov. 19 and 20.

Such things as increased yields, better highways, improved marketing conditions will be incidental to the conserving of the farmer himself. How these problems are to be met will be discussed by a notable array of speakers, who will consider the farm from every possible angle.

IMMIGRANTS WANTED

FARMERS, LUMBER CAMPS AND RAILROADS IN NEED OF UNSKILLED HELP.

CONDITIONS GOOD ABROAD

Many Who Went to Homes in Europe Have Not Returned—Immigration Shows Shrinkage.

New York, Oct. 15.—At present demand for labor greatly in excess of the supply is indicated by the constant appeals to the immigration bureau and steamship lines from certain business concerns to be put in touch with incoming workers.

The district around Pittsburgh, said one of the officials of the information branch of the immigration service, is at present reported anywhere from 75,000 to 100,000 men short.

It would appear that this shortage in labor supply is due to unusually good opportunities for workmen rather than to unusually small immigration lists.

From this it appears that the immigration for this year is likely to be all below the average, 899,999 being about the normal immigration total for one year, and the excess of immigration over emigration, 171,449, is nearly twice that of last year.

The fundamental cause for the present shortage may be seen in the figures. The panic occurred in the autumn of 1907, bringing with it a great industrial depression over the whole country, so that during the following winter laborers could find no work and returned to their homes in great numbers.

Many of those who returned to their homes a year ago have not come back, for the reason that they found unusually good industrial conditions in Europe. There has been a particularly great demand for agricultural labor in Germany and in central Europe.

The demand for farm labor in the middle west this year is particularly great. An unskilled husker in the middle west this year is particularly great. An unskilled husker in the middle west this year is particularly great.

European farmers can now run at a profit many of the farms abandoned by the original possessors in the middle of the last century, owing to the great increase of the market for American farm products, but they have to be experienced farmers.

"I know of no more regrettable sight," said Inspector C. L. Green of the information branch of the immigration service, "than that of the young foreigner of good and respectable family of limited means who comes to this country in search of position as clerk. Many of them do so come, especially from Germany, thinking that there are so many foreign firms in New York that they can easily get positions, although in many cases they do not even know English language.

APPLES GOING TO WASTE

Fruit Rotting On Ground In Parts of Kansas This Year.

Topeka, Kan., Oct. 15.—For lack of cold storage houses and buyers, thousands of bushels of apples are going to waste in Kansas this year.

In Reno county alone, one of the largest apple-growing counties, the waste is estimated at not less than 100,000 bushels.

Except for the work of the State Agricultural College the waste would be even greater. A month or so ago, the

college, noting the great waste that was probable, undertook to bring buyers into the Kansas orchards.

Formerly there were numerous storage houses in the principal apple centers of the state, and nearly every apple packing town had one or more evaporators which used the cull stock rejected by the packers.

Later, when Oregon and other Western states, where orchards were handled on scientific methods, began to put out a superior grade of apples, because of better methods of handling and packing, the Kansas trade dropped off.

INDIAN'S NOTABLE CAREER

From Breaker to United States Marshal—An Expert Farmer.

Tishomingo, Okla., Oct. 15.—From the position of brakeman on a railroad to the office of United States Marshal, and from all parts of the country every fall, now about all the packing that is done is by local buyers, and unless the apples are of a superior quality, they are a dead loss to the farmer.

Colbert is a character—and a good one. He has broken bronchos, fought and men, warred with Spaniards in Cuba, where he was a Rough Rider under Col. Roosevelt, and exemplified the strenuous life in more ways than one.

Ben Colbert is 29 years old. The Colbert family has long been identified with the affairs of the Chickasaw Indian Nation. His grandfather, John Colbert, was a colonel in the Chickasaw regiment in the battle of New Orleans when Gen. Jackson administered such a defeat to the English.

Colbert liked railroading and he began as a messenger boy for the Katy at Atoka, I. T. He became bill clerk at a later year, clerk at Denison, and later yard clerk at Denison, a batch. He served as switchman and brakeman and finally he became a yardmaster in Mexico for one of the principal roads.

MULES GO ON RAMPAGE.

Government Hybrids Raise Disturbance in San Francisco Streets.

San Francisco, Cal., Oct. 15.—One hundred and thirty-eight government mules, en route to the Presidio and temporarily quartered in the Southern Pacific corral at Sixth and Berry streets, broke out of the inclosure and started to see the town.

At dawn burghers of the Mission district were startled out of sleep. Windows flew open, heads popped out with the accord the neighborhood, wailing not what was doing at such an unseemly hour, raised its voice in questioning.

Against the northern sky were winking the electric lights of the city. After their incarceration in the box car those lights looked good to the mules. Braying and kicking their heels in their banks and trotting in the deserted streets and started the householders into a near-panic.

They grew playful, then quarrelsome, finally they drifted up the streets in three or four straggling over gardens and lawns and thumping against front doors and fences.

Within ten minutes the officers of the Society for the Prevention of Cruelty to Animals had received nine calls to come and raise the siege. Deputies were aroused and sent on horseback, Maj. K. Hampton of the Quartermaster's Department, issued orders to the First Cavalry and the sleepy soldiers were tumbled out of country with the intention of doing noncommissioned officers.

SETTLE LONG WILL CASE.

Enormous Fortune of Mexican Consul Is Divided.

Los Angeles, Cal., Oct. 14.—After six years of contest over the estate left by Don Guillermo Andrade, consul of Mexico in Los Angeles, who died in 1905, has been settled and the estate will be distributed according to the terms of Andrade's will.

The principal beneficiary, Guadalupe G. Andrade-deBlinn, widow of Andrade and now the wife of E. F. Blinn of Los Angeles, will receive one-fourth. The other heirs are Albert and Eduardo Andrade, sons; Mercedes Andrade, daughter; and two grandchildren.

Stationary Vacuum Cleaner \$35.00

Driven by GASOLINE ENGINE or Motor One of the Best on the Market. Place in Cellar or Outer Building and Pipe to Each Floor Where the Hose is Attached When Cleaning is to be Done

Practical for any home or a ten-story office building. Piping and hose extra. See in operation at Sedalia State Fair in machinery hall.

Manufactured by W. S. SCHUYLER SAVANNAH - - - - MO.

COL. ROOSEVELT SHOT

Continued from Page One.

hit," he said, "but I don't think it is anything serious."

Dr. Scurry Terrell of Dallas Tex., Colonel Roosevelt's physician, who had entered the automobile just before it started off, insisted that the colonel return to the hotel. He would not hear of it, however, and the car was driven on to the Auditorium. As soon as they reached the building Colonel Roosevelt was taken into a dressing room and his outer garments were removed. Dr. Terrell, with the help of Dr. John Stratton of Milwaukee and Dr. S. S. Sorenson of Racine, Wis., who were in the audience and came to the dressing room on a call from the platform, made a superficial examination of the wound. They agreed that it was impossible to hazard a guess as to the extent of the colonel's injuries, and that he should by all means go at once to a hospital.

"I will deliver this speech or die, one or the other," was Colonel Roosevelt's reply.

Despite the protests of his physicians, the colonel strode out of the dressing room and onto the stage.

Then Mr. Cochems stepped to the front of the platform.

"I have something to tell you," said Mr. Cochems, "and I hope you will receive the news in quietness."

His voice shook as he spoke and a deathlike stillness settled over the throng.

"Colonel Roosevelt has been shot, he is wounded," he said in a low tone, but such was the stillness, that everyone heard him.

A cry of astonishment and horror went up from the crowd, which was thrown into confusion in an instant. Mr. Cochems turned and looked inquiringly at Colonel Roosevelt.

"Tell us, are you hurt?"

Colonel Roosevelt rose and walked to the edge of the platform to quiet the crowd. He raised his hand and instantly there was silence.

"It's true," he said. Then slowly he unbuttoned his coat and placed his hand on his breast. Those in front of the crowd could catch the slight of the blood stained garment. "I'm going to ask you to be very quiet," said Colonel Roosevelt, "and please excuse me from making you a very long speech. I'll do the best I can, but you see, there's a bullet in my body. But it's nothing. I'm not hurt badly."

Colonel Roosevelt began to speak in a firm voice, somewhat lower than his usual tone, and, except that his characteristic gestures were less emphatic than usual, there was nothing about the man to indicate his condition. After he had been speaking a few moments, however, his voice sank somewhat, and he seemed to stand rather unsteadily. Dr. Terrell and Colonel Lyon stepped up to him and the doctor insisted that he stop.

"I'm going to finish this speech," said the colonel emphatically. "I'm all right, let me alone."

Dr. Terrell and Colonel Lyon sat down again. The colonel continued his speech evidently with increasing effort, but he succeeded in making himself heard and talked for more than an hour. Then he was rushed to his automobile and flashed through the streets to the emergency hospital.

An examination of the wound showed that it had been made by a bullet of large size. It entered the fleshy part of the right breast, half way between the collar bone and lower rib. The physicians found that they knew no more after their examination than before as to the location of the bullet and it was decided to send for an X-ray machine to determine to what depth the missile had penetrated.

While he was waiting for the X-ray machine, Colonel Roosevelt sat upon the operating table and talked politics and joked with the physicians.

DREAM INSTIGATED ATTACK.

"God Called Me to Be His Instrument," says Schrenk Proclamation.

Milwaukee, Wis., Oct. 15.—John Schrenk, Colonel Roosevelt's would-be assassin, after a long cross examination finally gave his name to the police.

At first he refused to give an account of himself, and would say nothing except that "I will tell you tomorrow."

At length, however, the police forced from him the statement that he was John Schrenk of 379 East Tenth street, New York.

Clippings found in the man's pockets showed that he had studied Colonel Roosevelt's itinerary carefully, with the evident intention of selecting the place at which he might accomplish what he had in mind.

A written proclamation found on the clothing of the man who did the shooting reads: Sept. 15, 1912. "Sept. 15, 1901, 1:30 a. m. In a dream I saw President McKinley sit up in a monk's attire in whom I recognized Theodore Roosevelt. The dead president said 'this is my murderer, avenge my death.'

"Sept. 12, 1912, 1:30 a. m., while writing a poem, some one tapped me on the shoulder and said: 'Let not a murderer take the presidential chair. Avenge my death.'

"I could plainly see Mr. McKinley's features. "Be fore the Almighty God, I swear this above writing is nothing but the truth." Another note found in the man's pocket reads: "So long as Japan could rise to the greatest power of the world despite her surviving a tradition more than two thousand years old, as General Nogi so nobly demonstrated, it is the duty of the United States of America to uphold the third term tradition. Let every third term be regarded as a traitor to the American cause. Let it be the right and duty of every citizen to forcibly remove a third term. Never let a third term party again appear on the official ballot. "I am willing to die for my country. God has called me to be his instrument, so help me God. (Signed) Innocent Guilty." "In Germany a strong tower is our God."

HORSE SETS SELF AFIRE. Spark From Shoe Ignites Bandage and Owner Is Hurt. Lawrenceville, Ind., Oct. 15.—Daniel H. McGuire saturated a woolen cloth with kerosene containing gasoline and bandaged the leg of a horse he was driving. The horse struck a railroad track with his shoe and sparks flying from the rail ignited the kerosene. With one leg ablaze the horse ran
