

Inside Russia

By Rev. T. G. Craft

Stalin has hung his "iron curtain" around the boundaries of Russia for eighteen years trying to keep his people from having any contact or knowledge with the outside world, and from the outside world knowing what was going on inside Russia. Why does Stalin, the dictator of Russia, keep his people in ignorance of the outside world? Why does he try to keep the outside world from knowing what goes on inside Russia? There are several answers which I shall relate in the topics of this brief discussion. (I am talking most of my information from a native Russian who did escape Russia and is now here in the United States. Mr. Victor Kravchinko is the author of a recent book, "I Chose Freedom" in which he discusses freely and

frankly the terrible conditions inside Russia.) First, may I remind you that there are not more than five million Communists in the total population of two hundred million Russians. There are just enough Communists to enslave the one hundred and ninety five million Russians under the guise of the government. Some three million communists are employed by the government as secret spies and police. Many of the spies are not known by the people with whom they work on farm and factory. The spies have trained minds to remember the names of the people with whom they work and in particular any statement made by anyone who might criticize Stalin's government. All reports are secretly made to the department of what they call "justice." From there, the police or the MVD, take over. There are some 20,000,000 native

HERE'S A BRAISING BEAUTY

ROAST for Sunday, roast for company dinner, and only you to know that its cut comprises thrift! Can be conjoined with thrifty veal shoulder or breast, boned, spread with herb-savory stuffing, then rolled and tied for a regal roast that counts its cost in budget brackets. Try, see how economical an aid to the meat budget the veal cuts can be!

Russians who are slaves in Russia and are worked at forced labor under most brutal conditions. These slaves are the Russian criminals. A Russian criminal is one who opposes Stalin's Communist form of government. Moral criminals make up about fifteen percent of the Russian slaves. Usually the moral criminals are separated from the political criminals, but each group must pay the most terrible penalties in hard work, in cold, in starvation, in fatigue, in sickness without attention, and separation from relatives without the privilege of writing them and receiving letters from them.

The prison camps are all located in the frigid zones of Siberia. The prison barracks are usually in dug-outs with leaking roofs over them. The mud is often knee deep. The barracks are long buildings with only one stove for heating. Fuel is scarce and the building is never heated. The prisoners sleep on boards without mattresses or blankets. The prisoners sleep side by side with their feet extended towards the aisle and in the only clothes they have—the ones in which they work. They work in the rain and snow and the mud from five o'clock in the morning to eight at night. They go to their bare board beds with wet clothes, and try to sleep half frozen.

At four thirty o'clock in the morning, the guards arouse the muddy prisoners and line them up for rye flour, uncooked, mixed with water. Two tablespoons are allowed for each prisoner. Their best meals are made of fish heads and eyes floating in boiled water. A small bowl of this soup is a meal. The vegetables consist of boiled cabbage and water added to make it go around. This dish too is limited to a small bowl. With such foods these millions must do hard work under the rifles of hard boiled guards. No one can live long under such conditions, and these prisoners are no exceptions. So Communist Russia is literally devouring her own people in order to support the Stalin ideology of state Socialism. One can understand this cruelty if he knows the principles of Communism. In Communism the state is everything; the individual must be sacrificed for the welfare of the state. The people of Russia have no freedom, no privileges, no opportunities for self development and self expression. Their lives are not their own but belong to the state, and therefore, must obey the voice of the state.

From whence does Stalin find recruits for slave labor, as millions die each year? The KULAKS are

those enterprising farmers who have some degree of prosperity and some of them own their farms. All Russia is not in agreement with Stalin and Communism. So these farmers who get on and accumulate some wealth must first submit to the police who come and confiscate their farm products and their cattle and their household possessions. Next they are deprived of their farms; then they are arrested as enemies to the Soviet State. The only indictment against this class of farmers is that they have some property. But the police charge them of being enemies to the state. Under this charge, conviction is always certain. The penalty is a prisoner camp for life. Death comes in a few months and ends their misery and life.

All the workers in Russia are not prisoners. The factories and industries have paid workers who barely get enough to keep soul and body together. These industrial workers live in government owned houses which are not much more than hovels. Only the members of the Communist party live in good houses and eat good food. When the workers are tardy one time the government penalizes them by confiscating a large amount of their wages. The second offense is more severe; the third offense means a sentence to a concentration camp of hard work where the prisoner works the rest of his life for the government.

Absenteeism except in the case of serious illness means a severe penalty for the first offense, and the third offense means being sentenced to a prison camp for life. Only a state doctor's report de-

termines one's illness regardless of how sick the patient may be. If the patient is not able to have the services of the state doctor to testify and report the worker's illness to the proper authority, the worker is sentenced by a communistic jury to hard work in a prison camp. The statements made by any Soviet police whether true or false, is never refuted. He who refutes the testimony of the police is an enemy of the state, and is sentenced as such to death or hard labor for life.

If a machine breaks down and production is stopped even for a few minutes, some one is immediately charged with sabotage. Sabotage is a crime against the state. The Russian police and spies do not see any reason why a machine should break down. To these fellows only sabotage stops a machine. The innocent workers have to pay with their lives when machines break down or even produce a bad quality of goods.

In Soviet Russia, workers are on peace work production. If a factory fails to produce quotas of goods demanded and required by the government, then those in authority

of the factory management must answer to the proper department of government. In most cases of slowed production, somebody must pay the penalty which is always costly in human suffering and death. Americans must remember that in Russia there are no labor unions;

closed shops; strikes; slow downs, and demands for higher wages. Such attempts on the part of a group would mean death for the leaders, and life imprisonment at hard labor for those who would cooperate in such criminalities toward the state. (Cont. Next We

Prompt Handling Required To Save Vegetables' Value

Vegetables to be stored in home freezing units or lockers should be frozen, just as they should be cooked, as soon as possible after harvesting. This is the recommendation made by state experiment stations which have tested loss of flavor, tenderness and vitamin content in vegetables after the harvest.

"Prompt handling of garden produce from harvesting to freezing is of the utmost importance," say extension specialists. "For example, holding freshly picked peas in a warm room for three to four hours will materially toughen the skins. Losses of vitamin C are greatest during this period."

One to two thirds of their original vitamin C value may be lost by vegetables in 24 hours at room temperature. If necessary to hold overnight, they should be placed in a refrigerator or covered with crushed ice. Never try to hold them after shelling, slicing or scalding.

The findings concerning the loss of nutrition are of importance to housewives who harvest or purchase vegetables for the table. Peas are an outstanding example of the loss of flavor due to delay in cooking or processing. Tests by the state experiment station at Geneva, N. Y., showed also that vitamin C content dropped as peas grew older. In lots harvested at different stages of maturity over a 10 day period, the oldest lots contained 36 per cent less vitamin C than the youngest. They also lost tenderness.

Plant Extracts Surveyed For Antibiotic Properties

The green portions of sage brush, mountain pasque, juniper, wild butterscup and water leaf contain compounds which may rival penicillin in their antibiotic properties, believes Dr. Harve J. Carlson, assistant professor of bacteriology, department of pediatrics, Western Reserve university.

A pound of plant material yields extracts equivalent to several quarts of penicillin culture. Some of the plants extracted in Carlson's laboratory come from the west coast, others from the Rocky mountain area; some are collected locally and some in Wooster, Ohio. Ether is used to extract the antibiotic substances.

Dr. Carlson is chiefly interested in finding agents that are active against virus diseases, particularly infantile paralysis, which resist the present-known antibiotics as well as the sulfa drugs. The antibiotics that he has found in plants destroy cultures of pneumococci and of typhoid types of bacteria.

Penguins Are Comedians

Comedians in formal black-and-white dress—those are the solemn emperor penguins enticed from Antarctic shelf ice by men of the Byrd expedition for shipment to the Washington zoo. These flat-footed, flightless birds are partial to the southern hemisphere, says National Geographic society. Some species live as far north as the equatorial Galapagos islands. Unknown in the Arctic, penguins in the northern hemisphere are counted by the half-dozen in zoo and resort exhibits. Largest of nearly a score of living species are the emperor and king penguins. Their stalwart adults average a yard high, and include individuals that surpass 40 inches in height, 80 pounds in weight and an estimated 30 years in age. Small species grow only 15 inches tall. Fossil discoveries indicate many species that are now extinct, among them a family of six-footers! The rugged emperors incubate their own eggs and raise their downy young in the darkness of Antarctic winter when temperatures range from 40 to 80 degrees below zero. At this time their enemies, the leopard seal and the skua gull, are busy elsewhere.

Colors Are Important

Psychologists report that there is much more to the selection of colors than just "liking them." Color has a definite effect on the emotions and, as a result, affects the individual physically and mentally. They point out that red is a strong color and can be stimulating to a degree of over-excitement. Blue is more soothing but, if used in too large quantities, becomes depressing. Yellow is a warm, happy color. Color experts claim that color can quiet down over-active people or "pep up" those who are listless. It can create a feeling of hunger or kill the appetite, induce a feeling of well-being or actually result in illness. Clever use of color can create many desired effects without awareness on the part of those living with it. For this reason, the homemaker should plan color schemes carefully, not only for decorative appeal but also for psychological effect.

Testing Alloys

In a "bombproof" dugout at the Westinghouse research laboratories, engineers soon will determine the maximum strength of parts for aircraft jet engines. Disks of specially developed alloys, one foot in diameter and one inch thick, will be heated to temperatures above 1,400 degrees Fahrenheit and spun at the speed of 1,200 miles per hour—38,000 revolutions a minute—until they fly apart under the combined attack of centrifugal force and heat. The tests will reveal the ultimate strength of alloys now used in motors of jet engines.

Matched Roping At Littlefield Sunday

Littlefield — Rodeo fans from a large part of West Texas and Eastern New Mexico are expected to pack the Jaycee rodeo arena here Sunday afternoon at 2 o'clock, April 27, to witness a matched roping duel between Troy Fort of Lovington, N. M., and Red Whatley of Crosbyton, two of the Southwest's top roping artists.

The match bringing together Fort and Whatley in the same arena is an event that fans of this region have been looking forward to for a long time.

Fort, who only recently won over the famed Toots Mansfield at Levelland, and Whatley will each rope 10 calves. Although Fort has a national reputation, Whatley is also one of the best known ropers in this part of the country.

The roping classic is being sponsored by the Littlefield Roping Club.

Other events on the western program will include exhibition bronc riding, wild cow milking and open jackpot roping. The latter event is attracting a large number of entries.

Fort recently won honors at the 1947 Championship rodeo at El Paso, and was awarded second place in calf roping at the Southwestern Exposition and Fat Stock show at Fort Worth.

Labor Bill Will Protect Public

Representative George Mahon reports that the long awaited labor bill designed to protect the public and prevent abuses by labor bosses and management passed the House of Representatives in Washington last week by the overwhelming vote of 308 to 107. The bill now goes to the Senate for consideration where some revisions are anticipated. Mahon expressed the hope that when the bill is put in final shape it will be reasonably fair to all concerned, meaning fair to labor and industry, and not least of all, the public.

The Texas Members were divided on the final vote on the bill. Mahon, along with 13 other Texans, voted for the measure, and five voted against it.

"LIFE'S EDITOR SPEAKS"

He is not a preacher, but here is what he says: "We are witnessing an intercontinental divorce spree. The all-round champion is the U. S. where one urban marriage in two goes on the rocks, thus approximating the record hung up by the "Bolshevik free lovers," prior to Russia's familial reformation of 1936. And nobody knows how many American upper middle-class families are precariously held together because the partners feel that the Internal Revenue doesn't leave them enough money to support separate establishments. The normality of this situation is no less ordinary than the statistics. As Dr. Holmes has truly said, "When a Hollywood actress takes a fourth husband, who is finding her a fifth wife—they have no more to do with marriage than prostitution has to do with chastity." —Selected.

SERVES ABOARD O'BRIEN

Portable Hog Feeder

SPRING is a good time to plan for the summer hog range. A successful pig raising program demands not only that the porkers have good pasturage but also that adequate facilities be available for supplementary feeds.

The ideal way to meet the problem of supplementary feeding facilities is to make a number of portable feeders. Mounting the feeders on skids will enable the operator to move them from one

location to another by team or tractor with a minimum of difficulty. A unit of this kind should have a strong framework so it can be hauled from one site to another and be enclosed with materials that will protect the contents from the weather.

The feeder shown in the illustration was made by nailing asbestos cement board to a wood framework. Asbestos board was chosen because it provides a barrier against rodents in addition to being proof against sun, wind and rain.

C. R. Montgomery Circus Features Many Animals In Its Menageries

More can be learned from actual inspection of animals in an up to date zoo in one hour than can be gleaned from weeks, or perhaps months of study in books.

The largest Menagerie carried by any show in America is to be seen with C. R. Montgomery Wild Animal Circus which comes to Muleshoe, Wednesday, May 7.

The circus menagerie, which is opened a full hour before the regular performance, gives youngsters a chance to observe a variety of wild animals at close range. Especially appealing is the nursery department where a number of animal babies may be seen along with their elders.

Babyton, said to be the largest elephant on exhibition in America is always a delighted source of amazement to the kiddies, while in the clever tricks of pert little ponies, dogs and monkeys, and even mules, they can picture their own animal pets.

The acrobatic and aerial performers with the C. R. Montgomery wild animal circus are clean cut, fine appearing athletic champions whose excellent physiques and demonstrations of skill and courage are an inspiration to any boy or girl who

wants to grow up strong and healthy.

Nor let the clowns be overlooked. Children are as fond of these chalk faced, red-nosed, big footed merry makers as they are of their favorite comic strip characters.

Parents find C. R. Montgomery Circus particularly worth while for children because of the complete absence from its premises of any gambling games or undesirable exhibitions sometimes associated with itinerant amusement enterprises.

Two complete performances will be given here at 2 and 8 p. m.

Mr and Mrs. R. G. Spence visited at Friona Sunday with Mrs. W. A. Amburn and Mr. and Mrs. Leon Hart.

Legion Meeting To Begin Sunday

Snyder—Election of a new District Commander will head the business agenda of the annual Spring Convention of the 19th District of The American Legion to be held Sunday, April 27, in Snyder.

A. C. Jackson, Lubbock, 19th District Commander, will preside with the Will Layne Post No. 181 at Snyder as host. Post Commander of the Snyder Post is Elmer Taylor. George S. Berry, Lubbock, 5th Division Commander, will speak.

Mrs. Houston Hart and Mrs. L. S. Barron spent the day in Lubbock Tuesday.

Food Market Is Formally Opened

Formal opening of the Benton Food Market was held here Saturday, with a large crowd attending and getting in on the free coffee and doughnuts.

Mr. and Mrs. G. B. Benton expressed their pleasure at the warm reception given them. They recently moved here from Sudan and bought the store formerly known as Bulloch Grocery & Market.

Mrs. Lillian G. Goodson, of Childress, was here Sunday to visit her daughter, Miss Wanda Goodson, and with Mrs. M. A. Goodson and Mrs. Mary Hart.

Local Guernseys Place High In Plainview Show

Karl K. Kent, who lives northwest of Muleshoe, exhibited the grand champion Guernsey cow at the Panhandle Plains Dairy Show held second place aged cow, Red Cloud Margie, also was senior champion. M. C. Mason, of Muleshoe, showed the first place three year old bull, Acme and Marie's Valor; the second place aged cow, Red Colud Nellie; and the 4th place three year old heifer, Buddy's Florence. Kent also scored first with a senior yearling, Buddy Flora; second with his aged cow; first on his three year old bull; and second on his aged cow. These animals are some of the stock bought from Flume Farm, Derry, N. M., by a group of local stockmen cooperating with the Farmer's Home Administration office in Muleshoe, Leo Baker, manager. Their high showing at the big

regional Plainview show indicates their great blood lines and proves that the local men know their Guernseys.

Cancer Control Agent Was Here

Mrs. Henry B. Trigg, Fort Worth, field commander in 72 Texas counties for the American Cancer Society, was in Muleshoe Saturday in connection with the nation-wide observance of Cancer Control Month. Mrs. Trigg is known to local club women as the past president of the Auxiliary of the Texas Medical Association and past president of the Texas Garden Clubs. A campaign to collect funds in Texas to help fight cancer, one of the greatest causes of death among Americans, is now being waged.

L. H. Boulter, Lubbock, the district deputy state school superintendent, was in the county on business Monday. Please watch out for stakes along farm to market roads.

Most Accidents In Small Towns

Austin—Texas small towns are becoming more dangerous each year for motorists with an alarming increase in fatal traffic accidents shown last year the Texas Safety association revealed this week. The death toll for towns under 2,500 population in the state during 1946 was 76 per cent above the 1945 mark. George M. Clarke, managing director of the association, announced. Fatalities in larger cities increased only 13 per cent, he said, with a 34 per cent increase on state highways and a 22 per cent rise on county roads.

Clarke said a final compilation of traffic accidents in 1946 showed that 76 per cent of all traffic deaths in Texas—in other words three out of every four traffic deaths, occurred in small towns, on highways, or in unincorporated rural areas.

One of the reasons for the imbalance between accidents in cities and in rural areas, Clarke said, was a lack of emphasis on traffic safety programs in the smaller communities.

Miss Elizabeth Harden spent the weekend with friends in Lubbock.

Her Leading Man

Nutrition experts say the 6,000,000 American babies and other millions of children slightly older are better fed than at any time in the nation's history. That's real reason for celebrating National Baby Week, climaxed by National Child Health Day.

This homemaker like millions of others who want their babies to grow strong, is seeing to it that this child gets his breakfast early, only his is strained and comes from a typical food shelf can. Nutrition experts have proof that, with the addition of specially prepared meats to their diets, more babies than ever before are getting the well-balanced, complete diets they need.

Production Credit In Annual Meeting

Stockholders of Plainview Production Credit association, holding their 13th annual meeting in Plainview last Thursday, were told that the \$250,000 which the association borrowed from the federal Production Credit corporation 13 years ago had been reduced to \$50,000. Payment of \$55,000 during the last 12 months on the obligation, was one of the largest payments made on it in several years, they were informed.

In an election of officers held just before the group adjourned for a beef roast dinner with trimmings, R. A. Axtell, Castro county, was re-elected to a one-year directorship term, and A. B. Brown, Lamb county, was re-elected to a three-year directorship. Axtell has been serving as vice president of the association. W. W. Branscum, Muleshoe, is president of the association. He was chairman of the meeting Thursday.

O. G. Thomlison, secretary of the Production Credit corporation office in Houston, addressed the association members briefly on the state growth of the loan group. He said the Plainview association was one of 36 in Texas with a total of 30,000 members, and with \$9,000,000 capital. The Plainview association has 908 members in eight counties, Hale, Swisher, Farmer, Castro, Briscoe, Bailey, Floyd and Lamb. M. R. Snyder, secretary-treasurer

of the local association, gave a financial and operation report, listing assets at \$984,556.12, with \$677,648.29 of this being loans to members and \$207,300 invested in government bonds. Its liabilities of \$709,633.29 included \$513,297.73 in loans re-advanced and \$175,119.66 in other borrowed money. The figures were as of April 10, 1947, Snyder said. Net worth of the association was

reported by Snyder as being \$224,922.83, including membership stock of two kinds totaling \$149,610.00 and accumulated earnings of \$75,321.83.

Mr. and Mrs. C. A. Adams and son spent the past week end with her parents, Mr. and Mrs. J. D. Smith of Rochester, Texas. Enroute home they visited the O. L. Smiths of Idalou.

Chicken Range Waterer

ALTHOUGH the practice of turning out the laying flock on range in the summer has been demonstrated to be good poultry management, it does present some problems. One of them is the water supply. Except in large and specialized operations, it is usually impractical to pipe water to the flock. The next best thing is to use portable waterers that will provide a plentiful supply of fresh water

with a minimum of labor. A unit developed by the Montana State College poultry farms is made of an old barrel, float valve, a wire protected drinking pan and some lumber.

The sketch shows how lumber was used to make a framework on skids that holds the barrel and pan firmly enough to enable the unit to be snaked behind a tractor. It also can be filled from a tank truck if one is available. A portable waterer of this sort will take care of the needs of a fair sized flock and

Battleship Texas Is Coming Home

With the slogan of "Bring Her Back Home" the Veterans of Foreign Wars of the State of Texas, through its Senior Vice District Commander, Joseph Hutchison of the Fourth District of Texas, announced that they are going to raise \$100,000 to bring the Battleship Texas to the San Jacinto Battleground.

Commander Hutchison said one of the biggest drives locally and throughout the State has already been started by the sale of tickets to the Gigantic Rodeo at M. J. Fletcher's Autotel Stadium, April 25, 26, 27, Friday through Sunday. Tickets for adults will sell at \$1.20, while children tickets will be 60c tax included.

Mr. Rex Poston, District Commander, issued the following statement:

"The Veterans of Foreign Wars is certainly counting on the people supporting the rodeo in order that the Battleship Texas can be brought soon."

LEGUMES NEED NOT INTERFERE WITH ROTATION
(Bulletin of Armstrong Fertilizer Service)

Legumes can be grown without interfering with crops such as wheat, cotton, grain sorghums, potatoes and others.

With wheat use clovers such as crimson, or such as ordinary red clover planted with the wheat seed in the fall. The clovers will survive the winter and provide a good stand next spring only where rock phosphate has been planted below the clover seed in this territory.

When it is time to harvest the wheat, neither of these clovers is ever tall enough to get in the way of the combine.

Either of these clovers can be plowed under as a nitrogen source, or a good profit can be secured from renting as pasture or from cutting as hay or seed. The roots

required to produce three tons of clover hay contain about 72 pounds of nitrogen per acre or 350 pounds of 20 per cent nitrogen. The three tons of hay would add another 350 pounds of 20 per cent nitrogen.

Another legume which has proven successful with wheat and other small grains on the high plains on phosphated fields is hubam, the clover which prevents bloat in cattle.

Hubam clover should be planted in the spring with a seed drill over the growing fall wheat. Eight miles west of Kress the spring planted hubam did not get tall and was not in the way of the combine. The first cutting of hubam seed netted \$74.00 per acre and if the frost had held off two weeks longer, a second larger seed crop could have been harvested.

With cotton or with grain sorghums, just before the last cultivation, plant a suitable legume and irrigate if necessary.

The row crop should have received a sidedressing of phosphate.

Rock phosphate helps germination and stimulates early, vigorous root development of the legume as well as the row crop.

With grain sorghum, hairy vetch is perhaps the best legume. Soy beans are widely grown in other states in the row with corn.

Cotton requires a shorter legume. White Dutch clover stays out of the way of the mechanical cotton picker. Red or crimson clover are not too much in the way of picking cotton by hand. Clovers in growing cotton have given good results near Plainview and near Aiken.

As soon as early potatoes are off the ground apply rock phosphate if necessary and plant hairy vetch or Austrian winter peas. Both are giving results at Hereford, Muleshoe, Tulla and elsewhere.

\$317,000.00 WORTH OF NATIONAL AWARDS

More than \$317,000.00 worth of merit awards are offered in 1947 for superior achievements in national 4-H contests arranged by the National Committee on Boys and Girls Club Work, according to G. L. Noble, director.

Outstanding records of members in the United States will receive recognition on county, state, sectional and national levels in 24 different 4-H agricultural and home economics awards programs this year. Noble announced. Adult and junior leaders, clubs and county groups will also be given special awards. In Alaska, Hawaii and Puerto Rico, 4-H'ers are offered rewards for superior records in ten of the programs.

The programs are conducted under the direction of the Federal and State Extension Services. All awards are provided by private citizens, educational foundations and industrial organizations interested in furthering 4-H Club work.

Awards for county winners comprise 143,500 gold and silver medals, and \$9,200.00 in cash prizes of \$20.00 to each of the ten top ranking 4-H health improvement clubs in a state. Plaques of merit will also be awarded to the county in each state reporting the most outstanding 1947 program in 4-H farm safety and better methods electric activities. State, sectional and national awards include 184 gold watches, 1,087 U. S. Savings Bonds, 118 college scholarships and 785 educational trips to National 4-H Club Congress at Chicago.

In addition, scholarships totaling \$38,480.00 are offered to adult and junior 4-H Club leaders in 42 states to receive special instruction at tractor maintenance clinics.

ARTIFICIAL DAIRY CATTLE PROGRAM INAUGURATED

Lubbock — An artificial dairy cattle breeding program to serve hundreds of farmers operating on the South Plains has been authorized for Texas Technological College by recent action of the board of directors. Dairymen in the Lubbock milkshed will particularly benefit from the service, according to W. L. Stangel, dean of Agriculture.

The college plans to purchase two proven registered Holstein-Friesian bulls and two equally fine Jersey bulls for the program, Dean Stangel said.

Citing the practice of artificial

breeding to superior bulls as the surest method of increasing efficiency, both of type and production, Dean Stangel further pointed out that cost of such service is less expensive to the majority of farmers than the cost of individually maintaining bulls.

JIM JOHNSON STARS

Sunday's Lubbock Avalanche carried a full length picture of Jim Johnson, Lubbock high school's crack quarter mile runner, hitting the tape to win first place in that event in the time of 51.8 seconds. Jim has been a standout all year in Lubbock Western athletics, playing a stellar end on the football squad. He is a son of Mr. and

Sophomore Skating Party Is Held

Members of the Sophomore class enjoyed a skating party at Morton Roller Rink last Friday night. The party was given by the sponsors, Miss Margie Moore, Coach Beam, and room mothers, Mrs. Jim Clements and Mrs. F. H. Davis.

Delicious refreshments of sandwiches, cookies and cold drinks were served to the following:

Bill Thomas, Laura Marberry, Jimmie Clements, Don Fudge, Ledene Freid, Marlene Lindsley, Bettie Guthrie, Marion Davis, Virginia Riddle, Billie Bartlett, Dorman Riddle, Dorothy Waggoner, Willard Heatherington, Weldon McCarty, Jasper Pruitt, Patsy Blair.

Darlene Hennington, Johnnie White, Charlene Prather, Chubby Seal, Joyce Nickels, Dot Kent, Joan Nickels, Cullen Kent, Carolyn Moore, Don Seal, Dorris Bickel, Bill Jeter, J. C. Buchanan, Joe Bob Horsley, E. L. Reeder, C. W. Riddle, Alton Taylor, Harney Coffman, Kenneth Huff, Junion Benson, Richard Barnett, and Miss Joyce Huff.

JUNIOR-SENIOR BANQUET SCHEDULED FRIDAY NIGHT

The annual junior-senior banquet will be held in Fellowship Hall Friday night, beginning at 7:30. "Stardust" will be the theme, with the setting in a flower garden. Program will be carried out by members of the two classes, sponsors said. Among other things the seniors' class prophecy and will be to be revealed.

HALF CENTURY CLUB

Half Century Club met April 17 in the home of Mrs. Beulah Mardis, with Beulah Charles as co-hostess. Eleven members were present. We enjoyed very much having Mrs. Emma Wyer with us. The evening was spent piecing quilts for the storm victims and playing 42. The next meeting will be May 1 with Mrs. Anna Moehler.

BIRTHDAY DINNER

W. H. Awtrey, jr., of Lubbock, spent Saturday night here with his parents, Mr. and Mrs. W. H. Awtrey, sr. They visited Sunday with Mr. and Mrs. Deon Awtrey at Goodland. They Awtreys gave a birthday dinner in honor of their little son, Ronnie, on his first birthday. Mr. and Mrs. O. J. Awtrey of Melrose, N. M., drove over with the Awtreys from here. Mr. and Mrs. Arless Graham and little daughter, Pam, of Lubbock, also were there.

MUSIC LOVERS CLUB MET IN FARR HOME

At their regular meeting Monday night, April 21, the Music Lovers Club voted to continue meetings during the coming summer vacation. The club met in the home of Mrs. Farr, with DeWayne Farr as host and Rilda Lou Gabbert as co-hostess.

The program was made up of individual selections on the piano by members. Refreshments of banana ice cream and angel food cake were served to the following members and guests:

Bettie Marie Ford, Rufus Aylesworth, Truitt Craft, Roald Johnson, Amrina Aylesworth, Marilyn Gupton, Frances Totten, Bobbie Frances Collins, Holly Ann Cox.

New Bamboo Pattern

Bamboo patterned Weaves wallpaper in tones of brown, green and pinky-beige creates an effective background for this corner grouping in a modern living room or study. Coffee-table of generous size is dark oak, done in square modern lines with a parquet top. Modern lamp base is metal on wood with a gold parchment shade.

Billie Ann Pence, Cecil Wayne Ford, Billie Margaret Collins, Joy Snyder, Robin Butler, Mrs. Anita M. Butler, Mrs. Farr and Gary. Members will be notified of the date and place of the next meeting.

SUNSHINE CLUB

Sunshine club met Apr. 17 in the home of Mrs. H. D. Crawford with nine members and three visitors present. Roll call was answered with a Bible verse. Two quilts were to be quilted this week and sent to the needy people of Texas City.

It was also voted that Mrs. C. H. Odom and Mrs. L. E. Ware are to collect clothing next week to be sent there. We meet next with Mrs. Dave Coulter, May 1. Mrs. Selbert, Mrs. Frank Rowland and Mrs. Dave Coulter are new members. Refreshments of iced tea, cool aid and sandwiches were served by the hostess.

BAILEYBORO H. D. CLUB

The Baileyboro H. D. club met Tuesday, April 22, in the home of

Mrs. Loyal Judkins, with four members present. The afternoon was spent making dresser scarfs and tea towels for the hostess.

There was not enough present for a business session, but the "Commissioners' Supper" that is to be Monday night at the Fellowship hall was discussed.

We hope some of the sickness in our community will be over so many from here can attend.

Our next meeting will be at the home of Mrs. Florence Fine, Tuesday, May 13, at 2:30 p.m. Everyone is invited to come as a visitor or member.

The following were present: Mesdames Florence Fine, Fiddle Shafter, Janie Moraw and hostess, Loyal Judkins.

Bill Tilson, of Brownfield, loan appraiser for the Great National Life Insurance company and for the Veterans Administration, was here on business first of the week. Mr. Tilson is a director of the Texas Farm Bureau. He was here in connection with applications for GI farm and home loans.

- Hospital News -

Mrs. R. L. Brooks of the Progress community, spent a few days in the hospital under medical care. She has been discharged.

George Havvis of this city had an accident this last week. He injured his right eye and has been in the hospital for treatment.

Mr. O. S. Richards of Progress spent a few days in the hospital under medical care.

Mrs. Cliff King is in the hospital this week, under medical care.

Mrs. Martin Oliver underwent surgery this week. She will be discharged soon.

Mrs. J. E. Wilhite is in the hospital. She will be discharged soon.

Congratulations:
To Mr. and Mrs. L. D. Johnson on the birth of a son, Darrel Clifford, born April 21; weight 6 pounds 10 ounces.

SPEECH STUDENTS WILL GIVE RECITAL MAY 1

The Speech students of Mrs. Marly Ezell will present a recital at the high school auditorium Thursday night, May 1, 8:00 o'clock. The public is cordially invited to come and enjoy the readings and skits prepared by the following students: Bob Jennings, Patty White, Mike Morgan, Gaylon Ezell, Joan Green, Paula Province, Texann Holdeman, Charles Lenau, Stanley Fox, Gaylord Tate, Marilyn Gupton and Howard Tate.

News Briefs

Mrs. Jack Lenderson is in Littlefield to be with her father, W. T. Fowler, who has been seriously ill.

Mrs. J. D. Witherspoon Saturday received a message announcing the death of her sister-in-law, Miss Willie Witherspoon, El Dorado, Okla. Mrs. Witherspoon was accompanied to El Dorado by her son and wife. Mr. and Mrs. J. W. Witherspoon of Longview community and they were met there by the other children: Mrs. Lyle of Austin; Mrs. Alexander, Hollis, Okla.; Miss Mary Ellen of Lawton, and Mrs. Losey of Omaha, Neb. All returned home Sunday.

Develop New 'Hooks'
Development of a new artificial hand for amputees that is far superior, mechanically and cosmetically, to anything yet perfected has been announced by the army prosthetic research laboratory.

The new hand operating more effectively than the present "hook" is life-like in appearance because of a plastic glove that is seamless, flexible and waterproof. It weighs 12 ounces.

Major Gen. Norman T. Kirk, surgeon general of the army, in announcing the new device emphasized that the hand is not on the market now and will not be until industry gets them into production.

One of the features of the device, it was pointed out, is the psychological effect it will have on veterans by giving a boost to their morale through the life-like appearance of the glove.

Key To Cookery
Temperature is one of the keys to successful egg cookery. For some purposes eggs will perform better if they are cold; for others they should be at room temperature. When it comes to separating raw whites from yolks, eggs should be neither too warm nor too cold. An egg just out of the refrigerator is difficult to separate because the white clings to both shell and yolk. On the other hand, at a temperature of 75 degrees or more the yolk flattens out and breaks more easily. The happy medium, then, is reached by keeping the egg at room temperature about half an hour before separating.

Mrs. Buck Wood had as guests Sunday her mother and father, Mr. and Mrs. M. L. Hardy and an aunt, Mrs. Nora Houser of Hart.

Bring Your UPHOLSTERING to MISS OLA SEALS 3 Blocks East of Bank 14-4tp

Mr. and Mrs. J. E. Perkins, of Circle Back community, visited here Sunday with the families of Albert Perkins and Mrs. Tom Bertry.

Mr. and Mrs. Eddie Lane and children returned yesterday from Waco where they had visited several days with relatives.

Mr. and Mrs. Dave Aylesworth and Mr. and Mrs. L. V. Jull Sunday visited friends at Wick Falls and Lawton, Okla.

Miss Evelyn Milam, a teacher at the Perryton schools, was in Muleshoe Saturday. Miss Milam is the daughter of Mr. and Mrs. John Milam.

Mr. and Mrs. Ben Oglesby, Jr., and little daughter visited Sunday with Mrs. Oglesby's parents at Westbrook.

Mrs. Christine Howard, Mrs. Albert Perkins, and Miss Mamie Kelton attended the annual Fiesta in San Antonio last week end, returning home Wednesday. They were enraptured with the "Battle of the Flowers," the great parade and celebration. Tremendous crowds attended, they said.

METHODS TO REMOVE LETTERING FROM FLOUR AND FEED BAGS

By O. E. Bowman
Science Instructor, Muleshoe, Tex.

Due to so many questions about lettering on feed bags, I contribute this to the public.

Due to the scarcity and high prices of textiles, homemakers have long used the sturdy cotton fabric of many feed and flour bags in color designs for making everything from napkins, towels, draperies, bedspreads, luncheon cloths, and tea towels. With the use of the bags the problem of how to remove the black printed letters that label the bags has presented itself. Below is outlined five methods which have been used successfully in taking print from sackcloth:

1. Wet a bar of laundry soap and

Uncle Sam Says

This is getting ready time for my farmer nieces and nephews. Today's plowing and investment in money and labor may or may not pay off in rich crops. There's a big IF in every farm family's life. If the sun shines, if it doesn't rain too much, if we have a drought-if, if, if. However, there's one crop which has no "if" side. It's a crop of Savings Bonds, which grows steadily, rain or shine, wind or calm, year after year until it produces \$4 for every \$3. My city nieces and nephews can plant this crop, too, by joining and staying on the payroll savings plan or by arrangement with their bank. U. S. Treasury Department

rub on the dry bag until it is entirely covered with a thick layer of soap. Roll up the bag and let stand several hours.

2. Scrub the bag with hot water and laundry soap. This often removes nearly all the ink and dyes, and the rest usually disappears if the bag is boiled in soapy water for half an hour and rinsed. Then a chlorine bleach may be used to take the last traces of black.

3. Soak the bag in kerosene overnight. Then wash, first in lukewarm water, then in soapy water, and rinse thoroughly.

4. Cover the black print with lard or soft petroleum jelly (vaseline), rubbing the grease into the fabric thoroughly. Leave overnight to loosen the black, then wash in soapy lukewarm water and rinse.

5. Boil bag in water with sodium hydrosulphite or some other dye remover, which may be purchased at drug stores. Always follow directions given on package, and rinse well afterward.

War Prisoners Recall Pies Concocted From Dry Milk

The average "ex-krriegle" (prisoner of war in Germany) probably has had many delicious desserts since returning to the United States, but it is doubtful that any dessert ever will taste quite as good to him as his first "kriegle-pie" after being released from solitary confinement.

Prisoners of War received the majority of their food from Red Cross parcels. Each parcel contained a can of dry whole milk which came to be one of the most important items, valued not only for its nutrition, but for the many diversified foods which could be made from it.

At first, prisoners used the dry milk according to directions, for drinking purposes, but it wasn't long before it was discovered that dry milk had many other uses. It isn't known who discovered that dry milk, mixed with butter or oleomargarine, and whipped until fluffy, then sweetened and flavored, made a rich and satisfying pie filling. However, it wasn't long before all "kriegles" were having dry milk pies for dessert, and any person who drank his milk was considered extravagant. Basically, all the recipes for pies were the same. The crust was made in one of two ways. One method was to grind the crackers from the

Mr. and Mrs. Howard Cox spent the latter part of the week in Oklahoma City on business.

Bailey Cancer Deaths Numbered Four Last Year

Houston—Deaths due to cancer in Bailey County rose from 2 in 1945 to 4 in 1946, as cancer deaths throughout Texas continue to increase, according to official statistics of the State Board of Health released today by J. Louis Neff, Houston, executive director of the Texas Division, American Cancer Society.

Mr. Neff reports that there were 6,343 deaths from cancer in Texas last year, as compared to 9,548 during 1945.

A nationwide drive started this month with a goal of \$12,000,000 to fight the rising menace of cancer. Mr. Neff urges that citizens of the county give to conquer the disease which kills one person every three minutes.

Orchard Spraying Time Is Here

It's spraying time now, or will be soon, in every peach and plum orchard in Texas. Mrs. Laurette A. Williamson, county home demonstration agent of Bailey County, has outlined a complete spraying program for us, and she says that on peach and plum trees we have two separate enemies to worry about... worms and disease.

Worms are our first concern, and the time to kill them is just as the blossom petals begin to shed. And here's the spray mixture to us four lbs. of zinc sulfate, eight lbs. of hydrate of lime, and two lbs. of arsenic of lead—all mixed in 100 gallons of water. The idea here is to get this solution sprayed thoroughly over the small leaves and fruit so it will kill the weevil-like beetles which lay their eggs about this time and cause wormy fruit. Here's that mixture again: 4 lbs. of zinc sulfate, 8 lbs. of hydrate of lime, 2 lbs. of arsenate of lead, and 100 gallons of water. Mrs. Williamson says that 2 to 4 applications of this mixture ought to do the job, and that the second spray can be applied ten days after the first.

Against the diseases that attack peaches and plums, we have to change up the spray mixture. Scab and Brown Rot do the most damage to Texas peaches and plums, and a wettable sulphur spray will take care of them both. The mixture is simple—just put 6 lbs. of wettable sulphur in 100 gallons of water, spray it over the young fruit to prevent the growth of disease spores that are flying around in the air. This treatment, for best results, is given about two weeks after your last application against worm damage. Then follow it up with a second spray after another two weeks have gone by. Mrs. Williamson tells us that through the rest of the growing season, only one other spray job needs to be done. Time to do it is when the fruit gets two-thirds to three-fourths full size, or when the weather has begun to get dry. We use the same mixture: 6 lbs. of wettable sulphur in 100 gallons of water. This should protect the fruit right up to harvest time. However, if we get a big rain after any of these spraying jobs, another application will be needed.

Incidentally, Mrs. Williamson puts in a word about blossom blight, too. If your peach and pear trees are just beginning to swell and show a little pink color now, blossom blight is something you'll want to watch for, providing the weather warms up to around 80 degrees. If it gets that hot, it's a good idea to get busy and spray

Your Home

The other morning one of my neighbors dropped in for coffee. While we were chatting, she asked me if I had seen the article in the paper regarding a law requiring enrichment of white flour, bread and rolls. Twenty states already have passed mandatory laws. The article pointed out that the need for such laws is greater since the war-time food order requiring enrichment of white bread and rolls was revoked last October. My neighbor asked me if I felt that such a law was needed. Well, my answer was "yes" definitely—and I told her about my recent visit to a Baking Laboratory.

At the laboratory, I watched one of the women technicians test enriched flour to determine the thiamin content... and as I watched her she told me that enriched bread contains not only the famous B1 vitamin, but riboflavin, niacin and iron as well. I was interested to learn that many bakers in our state (as well as others) voluntarily enrich their products without a law. The technician explained that enriched flour may be used—or the baker may add vitamins and iron to his dough mix.

The use of enriched flour certainly seemed the simpler method to me—and my neighbor agreed. But the main thing is the added food nutrition. I'm sure every mother of growing children will agree that we should obtain a food enrichment law in every state. For after all, the health of our children—and ourselves—is our main concern, isn't it?

with eight pounds of dry lime sulphur in 100 gallons of water to prevent blossom blight. If the weather stays cool, however, you can leave this spray job out.

Mr. and Mrs. A. J. Gardner and Don have been visiting with the parents of both Mr. and Mrs. Gardner at Hollis, Okla.

As Homelike As a Barn"

Cy Hartman finally got his barn painted, but plenty of folks had a hand in it. Whenever someone got a free day, or a little extra time, they'd come over and help out with paint and brush.

And Cy, to show his appreciation, held a big "barn warming" Saturday—for all the folks who'd helped him (but not barring those who couldn't). Ma Hartman supplied sandwiches, and Cy rolled out a mellow keg of beer.

You'd never think of a barn as "homelike." But with those lanterns hanging from the rafters; makeshift tables spread heavy with food; and Ed Carey's fiddle playing while the folks enjoyed their beer—Cy's barn was sure a mighty hospitable-looking place!

From where I sit, it's just about as appropriate to have a barn warming as a housewarming... if only because it's another chance to get neighbors together in a spirit of good fellowship.

Joe Marsh

Yellow Jackets Hard Hit By Loss Of Key Boys — Reserves Are Lacking

Spring training, now underway at Muleshoe High, has revealed to Coach James A. Beam the big job he has in filling places on his 1947 football team that were left vacant by graduation.

The team this year will have virtually no reserves, and important jobs will be undertaken by boys who last year couldn't even get into the lineup. However, these boys are growing fast, and even now would be able to give a good account of themselves in scrimmage. By next fall they may look entirely adequate.

Thirteen boys look like first string material, whereas other members of District 5-A report many of their letter men returning for another year of competition.

If he were to make up a team tomorrow, Coach Beam would probably line the boys up as follows:

Left tackle: Bobby Goss, who played in several games last year, weight 180.

Left guard: A newcomer, Earl Henry, who suited out last year but never played a down, weight 140.

Center: David Wyer, weight, 155, who got in one game for a few minutes.

Right guard: Bill Garrett, who played in about half the games last year, weight 140.

Right tackle: Max Gardner, 180, who was in two games, did not letter.

Right end: Bobby Precure, weight 160, who was in one game, or Curtis Goss, weight 160, who played 6-man football year before last.

Quarterback: Teddy Joe Lawler, 140. Teddy Joe got in one game in the 1946 season.

Tailback: Wiley Moore, weight 175, veteran of the last two teams. More is a fleetfooted runner and

accounted for many touchdowns and many long gains last season.

Wingback: Weldon McCarty, weight 140. Weldon played in the Littlefield game.

Fullback: Jim Bickel, 150. Jim played at guard last year. He is a member of this year's track squad. Tough and fast, he ought to be a backfield power.

Don Mickey Sanders, weight 165, is a backfield utility man. Sanders played a very short time last year.

This gives two men, on for line play and one for backfield use, as reserve material. Perhaps some of the smaller boys will look good next fall, but to date it is a pretty glum prospect, for Muleshoe on the gridiron in 1947.

POSTOFFICE SUNDAY

OPENING HOURS POSTED
Patrons of the Muleshoe postoffice are advised that Sunday opening hours are from 9:30 to 11:00 a.

m. and from 1:00 to 4:30 p.m. Postoffice officials said many people have been inquiring about the hours and asked that a statement be published in the paper.

Butane-Propane FOR YOUR ENGINES

ENSGN CARBURETION

Thousands of successful Butane-Propane engine installations using ENSGN Carburetion return handsome dividends in fuel savings and in greatly reduced maintenance. There is no hard carbon. Lubricating oil can safely run three to four times as long. Because Butane-Propane burns as a dry gas, lubricating oil is neither diluted nor washed from cylinder walls. This means longer engine life than with gasoline or diesel fuel. Tractors, trucks and stationary engines burning Butane-Propane run three to four seasons without overhaul or valve grind.

CONSULT SPECIALISTS

The carburetion you buy and its method of application is the key to successful engine operation on Butane-Propane. ENSGN, carburetor specialists for 36 years, pioneered Butane-Propane Carburetion and has perfected an highly efficient vaporizer and carburetor for maximum power, economy and safety. Insist on ENSGN. Your local authorized ENSGN Dealer is trained to make good installations. Let him check your engines. He will tell you what you can expect from Butane.

CONTRACTORS NOTICE OF COUNTY HIGHWAY CONSTRUCTION

Sealed proposals for constructing 24.160 miles Farm to Market Road comprising grading, drainage and paving from Goodland East and North to 1/2 mile West of Baileyboro; a 1.745 mile road extending North from Maple; a 0.631 mile lateral extending East from Thirt Way School; and a 3.157 mile lateral extending East from Stegall School, all in Bailey County, will be received at the Office of the County Judge of Bailey County, Texas, until 10:30 A. M. May 15, 1947 and then publicly opened and read.

Bidders must submit a cashier's check or certified check for Five Thousand (\$5000.00) as a guarantee that the bidder will enter into contract under the conditions set forth within ten days (10) after notice of award of contract. The minimum wages which shall apply on this work are the established rates for this area. Each bidder shall submit a statement of his experience, financial resources and equipment with the bid. The County reserves the right to reject any or all bids, and waive all formalities. Plans and Specifications may be obtained at the office of Hasie & Green Engineering Co., Wilson Building, or P. O. Box 1139, Lubbock, Texas, upon a deposit of \$5.00, \$19.00 to be refunded when same are returned.

FARMERS CAN PREVENT CHICK RESPIRATORY DISEASES

Lubbock—Farmers may help prevent respiratory diseases in baby chickens by lining brooder house walls up about 36 inches from the floor with heavy tar paper, according to Delbert Devin, assistant professor of animal husbandry at Texas Technological College. Paper will not only keep out drafts, but will also prevent chicks from piling up in corners if it is rounded there instead of being tacked tightly.

A chick guard of 12-inch cloth, commonly known as hail screen, should be kept around the hover for 36 hours after baby chicks arrive to keep them in. The guard may gradually be moved back for about four days, when it should be no longer needed.

Temperature under the hover should be 95 to 100 degrees during the first week, 90 to 95 degrees the second, and gradually decreased until the end of the eighth week. Two or three inches of litter should be kept over the floor at all times, to be changed weekly for two or three weeks and twice weekly thereafter. Ground bundles or shredded corn stover are recommended for litters, but farmers should make sure no grain remains on the stalks before they are ground.

When chicks are 24 to 36 hours old they should be fed a good chick starter, containing about 20 per cent protein and fortified with cod liver oil or vitamin D.

Cleanliness is of utmost importance in disease prevention. Brooder house floors and walls up about 12 inches should be scrubbed with a stiff broom dipped in lye water, and the rest of the house sprayed with a good disinfectant before the chicks arrive. All movable equipment should be soaked in lye water, using one can of concentrated lye to 10 gallons of water.

Mr. and Mrs. E. E. Dyer left Sunday for a business trip to Dallas, and a visit of several days with her parents, Mr. and Mrs. W. M. Cobb, at Lake Providence, La.

Men Like This Coat

Lauritz Melchior, Ed "Archie" Gardner and other members of Cosmopolitan magazine's all-male fashion jury selected as one of the winning entries the all-weather, all-purpose coat designed by Aquatogs, shown above as pictured in the April issue of the magazine.

Fashioned of Milliken's tattersall check, it has patch pockets, dressmaker cuffs, and detachable hood. Other members of the jury who felt this was a rainy day rig that combined pertness and protection were Ernest Truex, Frank Shields, John Hodiak, Herbert Marcus of Nieman Marcus, Mischa Auer and Ed Condon.

NEED CONTINUES FOR SALVAGING USED FAT

The continued need for salvaged used kitchen fat was emphasized at a recent meeting of the Association of Agricultural Extension Editors in New York by Roy W. Peet, chairman of the American Fat Salvage Committee, Dr. Bristow Adams, former extension editor of Cornell University, and Harry P. Mileham, publications expert of the United States Department of Agriculture's extension service.

Mr. Peet reviewed the fat salvage program's fifty five months of operation and explained due to the world-wide shortage of fats and oils no improvement in the domestic situation is expected before the end of the year.

"Consumers in the United States

could use one billion pounds more fats and oils in 1947 than will be available," Wilder Breckenridge, manager of the committee pointed out, adding, "At present it looks as though only 15 per cent of that amount will be supplied by the salvaging of used kitchen grease."

Guests, who also included food editors of Metropolitan area newspapers and national magazines, radio commentators and home economists from vicinity universities, were welcomed by Alexander Williams, the committee's director of information. Roscoe C. Edlund, secretary-treasurer of the committee, acted as master of ceremonies.

J. K. Adams, county agricultural agent, attended a conference on 4-H Club matters held at Lubbock Tuesday.

Defective Vision Traced To Emotional Disturbances

Prolonged emotional disturbances can cause permanent injury to the eyes in persons with unstable sympathetic nervous systems, reports Dr. David O. Harrington, assistant clinical professor of ophthalmology in the University of California medical school.

Dr. Harrington reported the analysis of a large number of cases of defective vision in young men examined by him while on active duty with the navy during World War II. Several varieties of ocular diseases were brought about by various emotional disturbances in large numbers of young soldiers and sailors, he said.

The physician said that the young men in whom these psychologically induced ocular diseases were found had inherited a deficient autonomic nervous system which controls certain involuntary muscles in the blood vessel walls and thereby affects blood circulation.

When such individuals are subjected to severe emotional disturbances there is an involuntary, severe contraction of blood vessels in various parts of the body. In the case of the eyes this contraction may cause marked changes in the retina or sensitive nerve layer at the back of the eye. If the disturbance is short-lived, these retinal changes may disappear, but if it lasts a long time the damage may be permanent.

Filipino Writes Pritchett To Tell Of School Needs

Euel Pritchett, local business man, has received from his former orderly in the Army, a Filipino, living at Donas, Cebu, Philippine Islands, a communication that we believe will be of interest to our readers. The young man, Antonio Almacan, is in need of several books and school materials in order to finish his school work. Mrs. Pritchett and other friends have accumulated things to be sent to him, as well as clothing, etc. for the family.

The letter follows:
Mr. and Mrs. Euel Pritchett:
Dear Sir:

Sorry indeed that until now I never received any letter or note from you. What is the cause of your silence? Have you any sentiment against me? If it is so, I ask you to tell it to me and to pardon any errors I have committed for although I believe I have done something which is not good to your liking.

Sir, am writing you this letter in behalf of your companions, Lt. Alton, Argue, Lee Parcell and Roseberry for the purpose of conveying or extending my warmest regards to all of you, my masters. Are they in good condition? Hoping to hear from you soon. I'm very glad that

Scout Chief Aids Young Craftsmen

NEW YORK — Dr. George J. Fisher, left, national commissioner of the Boy Scouts and honorary president of the Fisher Body Craftsman's Guild, discusses plans with W. S. McLean, Guild secretary. Teen-age boys, enrolled in this year's competition of model cars and Napoleonic coaches, will receive \$85,000 in awards, including eight university scholarships.

each of you will write to me a letter. Sir, even though I'm married,

still I'll never discourage hitching my wagon to proceed my study for that is always life. I lack one more year to graduate. Please, sir, extend your help to me. Tell Mrs. Pritchett about this. I need fourth year books and school materials. I need Webster's Dictionary, Physics, Botany, and others. We are now enroll in the Southern College in Cebu City but we have to begin on June 12, 1947. Thank, good night. Sir, I'll remain as ever good—

TONY
If anyone has any of the above books or would like to send Tony and family anything, the Pritchetts will explain how to get them into their hands.

PANHANDLE DECLARES WAR ON BINDWEED

College Station—Panhandle farmers and agricultural workers have an organized movement on foot to control bindweed, one of the state's biggest farm and pasture land weed pests.

Eighty-one farmers, county commissioners, A CA committeemen, county agricultural agents and other agricultural workers met in Amarillo recently and voted to set up a Panhandle Bindweed Control Committee to request assistance in using latest research information and to organize a Panhandle-wide effort to combat bindweed.

Art Bralley, Potter County agricultural agent, reports that more than 60,000 acres of the best Panhandle farm land is overrun with bindweed. Infestations have spread rapidly in recent years, he says, due in part to combines which travel over the state and spread the seed. Bralley also states that Texas is being made "a dumping ground" for bindweed seed, as there is no restriction on use and movement of grains infested with the seed.

Wortham Seale, district PMA fieldman, reported at the meeting that the 1947 PMA farm program provides a \$5.00 per acre payment for bindweed control, and urged interested farmers call at their county ACA offices for details.

The group meeting at Amarillo set up a temporary executive committee, with D. F. Osborne, Gray County farmer, as chairman. Each Panhandle county is being invited to select a person to serve as a director of the permanent Panhandle Bindweed Control Program.

PIANO RECITAL AT HIGH SCHOOL TONIGHT

Piano pupils of Mrs. C. S. Holland will be presented in recital tonight at 8 o'clock in the high school auditorium.

Pupils who will have a part on the program are Don Copley, LaVon Copley, Betty Shanks, Rosemary Pool, Marion Harris, Quinell

Elliott, Sue Young, Peggy Pettit, Mona Smith, Eibel Hicks Robert Holt, Peggy Robison, Herbert Jenkins, Bill Barbour, Joyce Gwyn, and Gwyneth Bigham.

Watch out for stakes on farm-to-market roads.

Mr. and Mrs. Clyde Keith, and R. J. Klump to San Angelo Sunday at the home of Mr. and Mrs. Carlyle, former Muleshoe. Mrs. Klump had been several days and return with them.

A-B-C Listing Shows Uses Of Electricity on Farms

Electricity was a toy when Benjamin Franklin made his famous kite experiments 200 years ago. Today it has become an essential part of the daily lives of city dwellers and many Americans who live on farms. Electricity is not a luxury to many people; it is a necessity.

Recently electricity specialists of the department of agriculture made a tally of the uses to which electricity is put around the farm. The astonishing total of uses comes to 600. So varied are the uses of electricity that there is at least one use for practically every letter of the alphabet.

A typical A-B-C listing of farm electric uses might run like this: A: Aerating milk, brooding chicks, clipping livestock, drying hay, elevating grain, filling silos, grinding feeds, heating water, irrigating fields, jointing woodwork, killing insects, lighting farmsteads, milking cows, neutering livestock, opening doors, pumping water, quickening housework, refrigerating food, sawing wood, turning grindstones, unloading hay, ventilating buildings, welding machinery, and X-Y-Z represent some 370 additional uses for farm electricity.

Delicate Process

In making glass for spectacle lenses, carefully selected materials—sand, alkali and other substances—are melted together in special clay pots. The molten glass is poured on a large table and rolled to desired thickness, following which it is allowed to cool slowly for about eight hours. When properly cooled the glass is cut into squares, each of which is subjected to careful inspection. About one out of every four of these squares is rejected as below the standard of quality for spectacle lenses. The accepted squares are heated and molded to the approximate shape of the lenses desired, after which they are carefully annealed. The glass now is ready for grinding into lenses, a delicate, precision operation.

All steps in the production of ophthalmic glass are carefully controlled, so that the glass will have the proper purity, uniformity and correct light refractive power.

Speculate on Spawning

For tens of centuries the spawning habits of American eels were shrouded in mystery, and even now eels that inhabit streams of this country are the subject of fabulous speculations when fishermen get together.

The American eel is one of the most remarkable of the fishes inhabiting our waters. She is a deplorable creature, but is a tough and voracious battler that will devour anything she can overcome. Only the female eel is known to enter fresh water, according to scientists who have studied the migrations of this curious species.

Despite her snake-like appearance and movements, the eel is a true fish whose scales are embedded in a slimy and gelatinous skin. Through examination of these minute scales it has been determined that an eel has a life span of at least 37 years.

Kitchen Is Fascinating

The kitchen is a fascinating place for the child as soon as he is able to move about. The kitchen furnishes more situations for learning than any other place he goes. Kitchen tools and equipment provide him with endless activities like dropping clothespins into a basket and fitting tops on jars and bottles. All his kitchen experiences help him to develop motor skills, judgment and ability to reason. The common everyday articles he uses are as valuable for learning as the most expensive "educational" toys. The child learns names of many things and what to do with them, and so learns common words more readily by this association with objects.

Gifts FOR THE GRADUATE...

GIFTS — That Will Be Treasured through the Years

FOR THE GIRLS —

- Diamond Rings \$42.00 up
- Pearl Necklaces \$4.95 to \$27.50
- Wrist Watches \$29.95 up
- Bracelets
- Locketts
- Costume Rings

FOR THE BOYS —

- Watches \$19.95 up

Farm To Market Road Program Is State Problem

By I. B. HOLT
 Representative of this district in the Texas Legislature, has written a letter to The Journal giving information on the proposals being made to finance farm to market roads in Texas. We are here printing the article, realizing its great importance to all our people, especially to farmers and land owners.

Farm-to-market roads are one of the urgent needs of Texas. This fact is one with which I am acquainted and is a problem the 50th Legislature should provide for. I am sure it will give SOME program of roads to the people—just what program is still an unsettled question down here.

I have been consistently supporting those measures that, in my estimation, would be acceptable to our people and give them some material results. First, I supported House Bill 44, which was a bill that would place a tax on one of our natural resources, natural gas, and half the revenue derived earmarked for the construction of farm-to-market roads. This bill has long since passed the House and is now in the Senate, and the opinion is that the Senate will not pass this bill.

Last week my Committee on Highways and Roads had for consideration House Bill 650, which would place an additional tax of two cents (2c) on the retail sale of gasoline in Texas. (We already have a four-cent tax, and this would raise it to six cents.) Our Committee had a long public hearing on this bill, said hearing lasting parts of two days with many witnesses testifying both for and against the passage of such an additional tax. At the conclusion of the hearing the tired and weary Committee voted 11 to 6 in favor of the bill. During this hearing I, as one of the Committee, submitted what I considered a much better plan, a substitute Bill taxing all the gasoline PROCESSED in Texas one-half cent (1/2c) per gallon, and submitted the following facts:

The tax would realize \$40,000,000 to \$50,000,000 a year, while the two-cent tax would only raise \$30,000,000. These facts were supported by data obtained from the Comptroller's office which shows over 90 billion gallons processed in Texas during the 1945-46 period and over 100 billion will be during the 1946-47 period, while only 15% is consumed in Texas. Consequently, only 15% of tax would be paid by Texans, while 100% would be paid by our citizens under the two-cent retail tax. The only objection seemed to be that it would drive industry out of Texas, which statement in my estimation is a mere presumption and conclusion. However, the Committee tabled my substitute.

I have had some communications from my district objecting to this bill and objecting to the additional tax. I agree with them that we certainly should not tax retail gasoline any more than at present and that the Legislature should find a better way to provide roads. I, for one, definitely think there ARE better ways; however, as a last resort, I do plan to vote for this bill, after I have done all I can toward raising the funds necessary from other sources. For the benefit of the farmers I wish to advise them that the bill DOES provide for the exemption for non-highway-use gasoline, and we would get the refund on this as well as the other tax the same as we have been in the past.

I hope I have made myself clear and would appreciate your giving as much publicity as possible to the people, as I would like to have their opinion on this.

I shall be glad to give you or any

HAT CLINICS ARE FUN

College Station—If you're tired of last year's hat, or if it has become somewhat worn and out of shape, don't discard it completely. Mrs. Dora R. Barnes, Extension clothing specialist, suggests that you get together with neighbors in your community and call in your county home demonstration agent for a "hat clinic".

At these hat clinics, old hats are restyled, cleaned, blocked and are sized. Veils are freshened, ribbons, flowers and other trimmings are added. Women study styles, how to purchase hats to suit individual personalities, as well as ways to handle and care for hats.

According to Mrs. Barnes, "a will to do, a little imagination and ingenuity is all that is needed and you can have fun as well as lots of hats."

Dr. Marshall Wayland Prexy

Dr. J. W. Marshall of Richmond, Va., has accepted the presidency of Wayland College of Plainview.

A telegram from Marshall said in part: "With humility I have accepted. Wayland College is engaged in the greatest business in the world. Joyfully I anticipate working with the board of trustees, the officers of the administration, the faculty, the present and future student bodies, the Baptists of Texas and with all the people in the great Panhandle section and the surrounding areas."

Dr. Marshall is to assume his post upon the retirement of Dr. G. W. McDonald, president of Wayland for 23 years, who has requested that he not be considered as president or in any capacity with the college when his present term expires July 31. Dr. McDonald has not been in good health in recent months and is retiring on that account.

Dr. Marshall has had his headquarters at Richmond, Va., the past several years while he served as secretary of the Foreign Missions board of the Southern Baptist Convention. He was secretary of the

TO TEACH HERE

L. C. Browder, of Lubbock, was here last week conferring with Superintendent W. C. Cunningham. The latter announced that Mr. Browder will teach Math in the high school here next fall. He is now teaching at Lubbock. Mrs. Browder is a sister of Mrs. R. L. Hobbs of Muleshoe.

Watch out for stakes on farm-to-market roads. If you need any information on this bill.

LET'S PLAY EDITOR—At the Texas Scottish Rite Hospital for Crippled Children in Dallas, the patients take their editing mighty seriously as they buckle down to getting out their four-page play newspaper, "Little Scotty" which goes to 57 hospitalized subscribers, "every so often." During the long periods of treatment and convalescence the children find much pleasure in preparing cartoons and copy for their tiny paper. Pictured are "City Editor" Kenneth Garner, 4, of Cisco a polio victim of the 1946 epidemic; Sharon Erenbrack, 9-year old San Antonian, undergoing treatment for a bone infection, and Barbara Allison, 10, another polio patient whose home is in Texarkana.

The Scottish Rite Hospital, which is supported by individual contributions, offers the best possible medical care and treatment at no cost to Texas crippled children whose parents are unable to provide for adequate medical services.

Baptist Student Union in Texas for five years before taking the secretaryship with the convention. Dr. Marshall has degrees from several educational institutions and for several years was pastor of the University Baptist church at Fort Worth.

Get B. F. Goodrich Silvertowns that OUTWEAR PREWAR TIRES

The new B.F. Goodrich tire has a wider, flatter tread that puts more rubber where it counts . . . on the road. More rubber there means more to share the wear . . . less wear at any one point . . . better mileage . . . greater safety all the way.

More rubber also means more grip . . . more safety from skidding . . . better stopping. This huskier tread is held by a sturdier cord body made with stronger cords and more of them to give more protection against blow-outs and greater resistance to road shock.

It all adds up to better service longer. That's why the new Silvertown is best in the long run. You pay only regular prices for the extra value features of the new B.F. Goodrich Silvertown that actually costs you less per mile.

Experiments Show Salt Is Common Vegetable Food

Vegetables have to eat just like human beings who eat vegetables. Vegetables, however, are not vegetarians; they are, if a name may be coined for them, mineralarians. Unlike vegetarians, some vegetables like salt and plenty of it to season their bill of fare, but others like only minimum amounts.

Investigation of fertilizers at New York state agricultural experiment station at Geneva have revealed that table beets have a great fondness for salt. In the first experiment ordinary table salt was substituted for one-fourth of the potash in the fertilizer. The yield an acre improved so much that the amount of salt was increased until the maximum yield was obtained, when seven times more salt than potash was supplied.

Soy beans will take up to one-third of the maximum amount of salt taken by beets and show improved yields, but they must have their full amount of potash in order to do so. If the amount of potash in their diet is reduced then they are unable to utilize salt.

Stone Age Paintings

Copies of Australian cave paintings, the originals of which are believed to date from Australia's stone age, which lasted until the white man arrived, recently were put on exhibit at Australia house in London. The originals have been annually retouched through the centuries by the Australian aborigines, with the use of red and yellow ochre and pipe clay white. The aborigines believe the pictures originally were made by the spirits of rain and fertility by casting their shadows upon the rocks of the cave. It was the practice before each rainy season for the aborigines to approach and touch the pictures—following which act of reverence the rains came. The pictures, which were found in the Kimberley district of northwestern Australia included "white, mouthless faces," some of which "appeared to be swimming in seas of little kangaroos, ducks, lilies and yams."

Mostly Static --

By Berry

Howdy Folks: According to the newspapers the government is buying huge quantities of potatoes and selling them to the alcohol distillers after they have been rotted beyond the stage of human consumption.

We wonder if that sort of thing is classified as political economy.

We have read and heard a lot about the economic system and still don't know what it's all about.

Some times we wonder if it isn't some one's plan to do something with some one else's money.

Or perhaps an economist is a man who tells you what to do with your money after you have done something else with it.

Studying economics won't keep you out of the bread line, but at least you'll know why you are there.

Lots of economical folks, hereabouts are buying Proctor Never-Lift Irons. Also Pop-up Toasters. Come in and see our 12 cu. ft. Home Locker—all stainless steel throughout.

Recipe for

Roast Ham, Apricot Sauce

Place ham fat side up on a rack in an open roasting pan. Make an incision and insert meat thermometer so that the bulb reaches the center of the largest muscle. Be sure the bulb does not rest on fat or bone. Do not add water; do not cover. Roast in slow oven (300 degrees F.) until the meat thermometer registers 150 degrees F. About 45 minutes before ham is done, remove the ham from the oven. Spread the apricot sauce evenly on the surface of the ham and return to the oven, continuing cooking until the ham is done. To serve, decorate with maraschino cherries placed in clusters over the surface. Allow about 20 minutes per pound for roasting the ham.

Apricot Sauce

2 c. apricot juice and fruit
3-4 c. sugar.
Rub apricots through a colander, add sugar and cook slowly until thickened.
