CONTINUING DRY SPELL As you know, the past few months have been unusually dry over the High Plains. What are the prospects for improved moisture conditions? I took up this questin with my friend, Dr. F. W. Reichelderfer, Chief of the U. S. Weather Bureau. It is his estimate that the chances for a wet summer are one in two. Because science has yet to solve nature's weather generation secrets, it is impossible to determine definitely whether the dry pattern will continue over the Plains for a prolonged period.

Despite the advances made in irrigation farming in the Panhandle and South Plains, the fact remains that our area's economic health is ranchers and dryland farmers, and while they were there. lack of rainfall means decreased income for them. When they are hurt by dry weather, as many of cur wheat farmers are this year (particularly north of the Canadian River), retail and wholesale business firms, service firms of all types, and banking institutions also are affected.

Since October of last year, the yon last Thursday. Mr. Bruce was abnormally dry weather. The Am- the former Elsie Dudley. arillo Air Terminal reports only 3.5 inches of precipitation from October 1 through April 30-only 57

illo. This is by no means a record. mained for a longer visit. On the average, Dr. Reichelderfer reports, the October-April period is this dry or drier at Amarillo in

Ray Persons took T. D. Hollis to Lockney General Hopital Monday afternoon. The cause of his illnes had not been determined at this writing. It was reported that his blood pressure was high and that it was possible he had suffered a light stroke.

Mr. Hollis is back home again and up and about. \_\_\_\_\_
