## Jayton Jaybirds Football Drills Are Now Underway

The Jayton Jaybirds opened the 1975 workout season Monday, August 11, with the largest squad in many years. The coaches have issued 40 sets of shoes for the conditioning drills. By the time school has started, there should be 45 gridders in the Black and Gold.

The Jaybirds will scrimmage Matador in Matador August 22 and scrimmage Knox City in Jayton August 29. All the

athletes will take part in both scrimmages so the new coaches can get a good look at all players.

The Jaybirds will open the season against Roscoe September 6th. Everyone is invited to come to the workouts to see the '75 Jaybirds.

We have a great group of boys that are working very hard to make you the fans proud of them this football season.

## State Brucellosis Eradication Program Being Planned

Mark A. Geeslin, interested Texas cattle producers will have an opportunity to hear and discuss proposed changes in the state's brucellosis eradication program in a meeting to be held in Lubbock on Tuesday night, August 19, at 8:00 a.m. in the Plains Coop 30 Mill.

Changes in the brucellosis regulations which will be discussed include the following:

1. Outlining the manner in which cattle may move into, within, and from certified areas.
2. Authorizing testing of all eligible test carrier cattle prior to loan, lease, sale, or change of ownership, except breeding cattle consigned to slaughter or animals originating in certified brucellosis free herds.
3. Requiring "S" branding of brucellosis exposed cattle only when going to slaughter or to a quarantined feedlot.
4. Authorizing and providing for using supplementary tests in certain phases of the program.
5. Allowing officials brucellosis calfhood vaccination down to two months of age instead of the present three months.
6. Outlining provisions to move breeding cattle from a county which has lost its modified certified free status.
7. Providing for methods of handling brucellosis negative cattle at livestock markets by keeping them separate from infected, exposed, or unknown status cattle.

More information on the new brucellosis regulations may be obtained from the Texas Animal Health Commission, Austin, phone 512-475-4111.

## Pointers Given On The Maturity Of Area Sunflowers

Early planted sunflower crops in Kent County, have completed the bloom stage and are now in a period of grain filling, says Mark Geeslin, county Extension agent. Since this is the period in which oil content and seed weight are being determined, farmers need to be careful not to stop plant growth too quickly with harvest-aid chemicals. Early killing could have a drastic effect on final yields.

The agent says that with the excellent moisture conditions prevailing in the High Plains, it would take four to six weeks after completion of the bloom stage for seed to reach full maturity.

By that time, he points out, the back of the head and stalk should be lemon yellow in color and most of the leaves will be dead or appear to be dying. The triangular shaped bracts on the outer edge of the head will be brown and brittle. The seed in the center of the head will be dark in color and as firm as the seed on the outer edge.

When these characteristics are noted, the seed is mature but the fleshy head base (which when cut open with a knife looks somewhat like a sponge) will not be sufficiently dry for combining. To avoid adding this high-moisture foreign matter to the seed during the combining operation, the head base must be dry, Geeslin cautions.

Several weeks could be required for the head base to dry naturally. During this period seed will begin to shatter and some yield will be lost. The best alternative is rush the final drying process with the use of a harvest-aid chemical.

Recently, Paraquat was cleared for use as a sunflower desiccant in Texas. The chemical may be applied at a rate of 1 to 2 pints per acre when sunflower seeds are mature, Geeslin says. Five gallons of spray mix (Paraquat plus water) should be used when treating by air and 20 to 40 gallons with ground equipment. For best results, a surfactant such as Ortho X-77 should be in adjacent fields.

"Chemical drift is a potentially serious problem," he says. "Since desiccation will, in most cases, be done with aircraft, producers should insist that the aerial applicator pick a calm day for the spraying operation."

Aerial applicators can help by equipping their aircraft with the new types of drift reducing nozzles such as "Raindrop" or by using drift reducing agents such as Target or Nalco-Trol. These equipment changes and additives will probably increase the costs of spraying operations. In the long run, however, this could be money well spent if there is danger of damaging adjacent crops, Geeslin believes.

## FmHA To Enact Emergency Credit

SNYDER, August 8 -- Changes in the special Livestock Emergency Credit Program are now in effect in Texas, according to Dale A. Keith, County Supervisor of the Farmers Home Administration (FmHA) announced today. The program, originated under the Emergency Livestock Credit Act of 1974, will continue to be administered through county offices of FmHA, the U.S. Department of Agriculture rural credit agency.

Under the program, FmHA guarantees loans made by banks and other commercial lenders to help farmers and ranchers continue in various lines of livestock production through a period of adverse economic conditions. The bill (Public Law 94-35) signed June 16 by President Ford, amended terms of the program established last year and extended its duration through Dec. 31, 1976.

Major changes in the program are: --Farmers and ranchers assisted by loan guarantees must be primarily engaged in agricultural production, and livestock operations must account for a substantial portion (at least 25 percent) of their gross income, working time, or investment. Previously, FmHA required that more than 50 percent of the gross income or time be devoted to livestock operations.

--The limit on any one borrower's guaranteed credit is raised to a \$35,000 line of credit from the previous loan limit of \$250,000.

--The maximum guarantee to a lender is raised to 90 percent of principle

and interest from a previous guarantee limit of 80 percent of loss.

--Maximum term of a loan was raised to seven years, with a three-year renewal permitted. Under the previous terms, loans could be made for three years, with a two-year renewal permitted.

--Under certain conditions, satisfactory evidence of a borrower's repayment ability can be accepted by lenders in lieu of collateral for a guaranteed loan.

--The national ceiling on total guaranteed loans outstanding at any one time is reduced from \$2 billion to \$1.5 billion. (Loans guaranteed by FmHA through mid-June totaled about \$325 million)

The amended Livestock Emergency Credit Act continues the previous guarantee authority for loans to farmers and ranchers in connection with the breeding, raising, fattening, or marketing of beef or dairy cattle, swine, sheep, goats, chickens, and turkeys. Interest rates are negotiated between borrowers and lenders.

Farmers and ranchers who may benefit from loan guarantees should apply to banks or other lending institutions. When details of a loan are negotiated, the lender may apply to FmHA for a loan guarantee. Benefits of FmHA programs are available without regard to race, creed, color, sex, or national origin.

County Supervisor Dale A. Keith said further information about the program can be obtained from the Scurry County FmHA office located at 3423 Ave. T in Snyder.

## New Plan To Be Enacted on Food Stamp Program

State governors have 45 days to comment on plans and amendments that are submitted by states participating in the Food Stamp Program, according to a new regulation announced by the U.S. Department of Agriculture (USDA).

The new regulation provides a 45-day opportunity for each state governor or his delegated agency to review the relationship of food stamp plans and amendments to other state plans and programs. State agencies will then send the governor's comments to USDA's Food and Nutrition Service (FNS), along with the state plans and

amendments when they are submitted for approval.

The proposal is in line with requirements of Office of Management and Budget and is similar to regulations that have been adopted by other federal agencies.

FNS received seven comments on the regulation after it was published for a 30 day public comment period on March 6. Six of those comments were in favor of the regulation, and one was not in favor. The final regulation will be published in the Federal Register of August 7 and will be effective immediately upon publication.

## Screwworm Spraying Is Being Advised

by Mark A. Geeslin

The first case of screwworms has been reported in Kent County. This is the farthest north that screwworms have been found in 1975. A northern migration has been expected because of the warm, wet weather. Livestock owners are urged to watch their animals for any wound, and to avoid ear-marking, branding, or other surgery or working wounds to animals until cool weather sets in.

Spraying with a recommended insecticide can reduce the risk of screwworm infestations. Livestock owners are urged to submit samples of larvae (worms) from deep in the center of the wound for laboratory identification.

The Kent County case was found about 12 miles west of Jayton and eight miles north of Clairmont, east of State Highway 208 and south of Farm Road 2320.

The area was to have been treated with sterile screwworm flies early this week. Release of sexually

sterile males among known screwworm populations is the primary tool of the Screwworm Eradication Program. Female screwworm flies usually mate only once in their lifetime.

Eggs produced as a result of mating with a sterile male will not hatch, thus ending the life cycle. When enough sterile matings have occurred, eradication is achieved.

A total of 90,000 sterile flies will be released this week in the area, and 90,000 each week for three weeks following to combat screwworms in the immediate area of the confirmed infestation.

Kent County reported only two cases of screwworms last year, compared to 165 in 1972. Kent County had only one case of screwworms reported from 1964 to 1972.

Mailing kits for sending samples to the Screwworm Lab in Mission are available from the office of the Kent County Extension Office.

## Commissioners Court Meeting Monday

In a regular meeting of the Kent County Commissioners court, it was more or less of a routine day, with no real important matters coming up.

Complete minutes of the meeting, as recorded in the office of County Clerk Zana Sherer, are as follows:

**ORDER TO PAY BILLS**

A motion was made by Sarah Byrd and duly seconded by W.H.Parks to approve all bills presented before the Court on this date. Vote on this matter was unanimous. Motion carried.

**TRANSFER OF FUNDS**

A motion was made by Donnie Carriker and duly seconded by George Taylor to transfer \$100,000.00 from Lateral Road Fund to the General Fund. Vote on this matter was unanimous. Motion carried.

**REQUESTS FOR LATERAL ROAD FUND**

A motion was made by W.H.Parks and duly seconded by Sarah Byrd to request from the State of Texas \$11,700.45 which represents Kent County's share of the Lateral Road Fund. The above amount is to be used to repair roads and to pay County road employees. Vote on this matter was unanimous. Motion carried.

**PURCHASE OF WATER VACUUM**

A motion was made by W.H.Parks and duly seconded by Donnie Carriker to purchase a water vacuum with attachments from Underwood Chemical Company for \$420.00. Vote on this matter was unanimous. Motion carried.

## Miss Teenage Abilene Contest Is Planned

A scholarship fund for the winner of the Miss Teenage Abilene competition has been formally established, according to Cleber Massey, president of Dr. Pepper Bottling Company of Abilene, sponsor of the Miss Teenage Abilene program. "Due to the fact that scholastic achievement is emphasized so heavily in each year's MTA program, we feel it extremely important to find the resources to enable us to award a college scholarship to the winner," Massey said.

Dr. Pepper Bottling Company of Abilene sponsors the Miss Teenage Abilene pageant, but due to franchise costs and promotional expenses the scholarship fund is

supported by banks and savings and loans in the area. "Both the Abilene Clearing House and Abilene Savings and Loan are participating in the scholarship program from the city of Abilene," Massey said. "And we still expect response from the banks throughout the area," he added.

The Miss Teenage Abilene competition is open to girls between the ages of 13 and 17 throughout 25 counties of the Dr. Pepper distribution area. Entries are still being accepted with the entry deadline set for August 23rd. The Miss Teenage Abilene pageant will be Saturday, September 27th, in the Abilene Civic Center.

## The New Polar Jayton Teachers Home-Coming

New teachers in the Jayton School system for the 1975-76 school year are:

- Donald Bagwell, History, P.E., and Coach
- Kathy Owen, Home Economics
- John Richey, History, Art, Elementary Principal, and Coach
- Terry Wilson, Speech, U.J.L. and Drama
- Jan Wilson, English
- Mrs. John Richey, Kindergarten
- Mrs. Beryl Murdoch, L.L.D. Program

## FLATLANDER LABOR DAY JUBILEE

You are invited to attend the Third Annual Flatlander Labor Day Jamboree, August 31-September 1, at the Fairgrounds in Lubbock. A big time for all and support for Texas Boy's Ranch as well. Texas Boy's Ranch will have the snack bar open all day, both days, with all proceeds going to T.B.R.

For more information, contact Texas Boy's Ranch, Lubbock, Texas, telephone 747-3187.

**Way of Life**  
Somehow it's easier to forgive an enemy after you get even with him. -Times, Marshalltown.

Children need adult help in learning to become self-directing and responsible for their own actions. Mrs. Ilene Miller, family life education specialist with the Texas Agricultural Extension Service, the Texas A&M University System, points out.

Polar Homecoming will be held Sunday, August 17, at the Polar Barn.

Registration will start at 10:00 a.m. and lunch will be served at noon.

President of the reunion is Ernest Ford; vice-president, Cecil Randolph, and secretary, Bessie Randolph.

Everyone who ever lived at Polar is invited to come and bring your neighbor, a spokesman stated.

**RELEASES TRASH**  
LANTANA, FLA.--The weekly National Enquirer has announced it will comply with a Secret Service request to return documents it found in Secretary of State Henry Kissinger's trash.

**CAR DEALERS QUIT**  
DETROIT--The auto industry's 22-month slump caused 368 new car dealerships to close in the first six months of the year. This decline being the steepest in five years.

**Not Always**  
Man does not live by words alone, despite the fact that sometimes he has to eat them. -Beacon, Philadelphia.

Children need adult help in learning to become self-directing and responsible for their own actions. Mrs. Ilene Miller, family life education specialist with the Texas Agricultural Extension Service, the Texas A&M University System, points out.

## Lady Bird Gives Highway Award

LUBBOCK-- Six maintenance construction supervisors for the State Department of Highways and Public Transportation have been selected as finalists for the 1975 Lady Bird Johnson Award for Highway Beautification.

The finalists are Grady James of Fort Worth, Clay Jameson of Matador, Rufus Jones of Fredericksburg, J.C. Larson of Gainsville, Dwain Rogers of Anson, and Wayne Rust of Mount Pleasant.

Mrs. Lyndon B. Johnson will present a plaque and her personal check for \$1,000 to the first place winner and a \$500 check to the runnerup in a special program September 18 at the Lyndon B. Johnson State Park in Stonewall.

Milton Clay Campbell, State Highway Department Maintenance Foreman from Ralls was the nominee from District Five for this award this year.

The award was established six years ago by the former First Lady to recognize the department maintenance man who does the best job of highway beautification in his area. The finalists were selected by department administrative officers from entrants representing all department districts across the state.

A selection committee appointed by Mrs. Johnson will judge the finalist entries and choose first and second place winners. The committee, headed by Professor Ely Urbanovsky, chairman of the Department of Park Administration, Texas Tech, includes Roy White, Glen Biggs, Mrs. Bill Hobby, and Mrs. Marshall Steves.

Maintenance supervisors are responsible for taking care of all state-maintained highway facilities in their areas. In addition to maintenance of highways, the men care for roadsides and the 1,100 roadside parks, safety rest areas, and scenic turnouts on the Texas highway system.

**Gerald Ford, President:**  
"I'm really encouraged and optimistic. I honestly believe there were more pluses than minuses."

**Richard Petty, stock car racer:**  
"I've always been thankful that I've been able to set a few records in my career."

**Henry Kissinger, Secretary of State:**  
"There is some slight movement on both sides towards seeking a solution."

**HOME BUYER CLINIC**  
By Robert J. Jay  
President  
American Land Title Association

### Prepare For Closing

Closing your purchase of a home can be confusing if you fail to study the facts in advance. If your acquisition involves a federally-related residential loan, be sure to review the closing cost information provided to you ahead of settlement under requirements of the Real Estate Settlement Procedures Act of 1974. This will help you better prepare for the closing.

Procedures and requirements of closing in your community have been developed through local and custom to protect individual interests in real property.

Local real estate law is an important safeguard where your rights and property are concerned. The same law also protects the interests that others may claim in land you think you own. Accordingly, your preparation for closing should include consideration of protective measures against possible challenges to your ownership.

A home buyer in the east recently learned about land title difficulty through direct experience when he purchased a residence and began erecting a fence along what he believed was his property line. His neighbor responded to this activity by filing a lawsuit in which it was contended that the fence was on land the neighbor claimed by adverse possession.

Fortunately, the buyer had obtained owner's title insurance before completing his real estate purchase. An attorney was retained and a settlement was arranged with the neighbor, through which the fence was relocated and necessary deed corrections were made. Related costs and fees were paid by the title company that issued owner's title insurance to the buyer.

Local real estate law is an important safeguard where your rights and property are concerned. The same law also protects the interests that others may claim in land you think you own. Accordingly, your preparation for closing should include consideration of protective measures against possible challenges to your ownership.

# POP-ing Off

By DON RICHARDS

Not many people knew there was an Aggie aboard the recent Apollo joint flight with the Russians. However, there was not only one Aggie but 25 of them.

The 25 "extras" aboard the Apollo were Aggie fish—not freshmen, but real live fish. You may have heard about them both from comments by Walter Cronkite and Johnny Carson.

**THE KILLIFISH**, one-month old at the time of blastoff, were raised at Texas A&M and are expected to tell Aggie researchers about the workings of the inner ear.

The fish were sent off in five different containers, five fish each, and each of the five groups had been raised differently with varied visual backgrounds. The scientists wanted to study the reaction the fish then had to the weightlessness of zero gravity in space. The three astronauts spent considerable time photographing how the fish were adapting to their new no-weight state and the fish are now back at A&M.

The A&M scientists said fish have two basic cues for orienting themselves — visual and gravity. Without gravity, the fish must then adapt themselves visually. How well the fish did and how it effected the inner ear is the major objective of study.

**THE FIVE** containers each held fish which had been raised with varied visual backgrounds since being hatched. One group had normal background, one group no sight, one raised with horizontal bars, fourth group with vertical bars, and the last with a black background. In the words of the

Aggie researcher, "This is basically a behavioral and anatomical analysis of the sensory mechanisms associated with balance and orientation."

It's hard to believe all that came out of an Aggie, isn't it?

**IT'S ALSO HARD** for us to objectively talk about Texas A&M — especially with football season coming up. However, the Aggies have been getting a lot of credit, and rightfully so, for the many research projects they have been conducting.

**TEXAS MONTHLY**, its August issue, heaps high praise on the Aggies and says the university research may, indeed, save the world. The article cites the work of the Aggies in developing farm techniques and research which has produced high crop yields and individual vegetables unbelievable in size.

**"THEY ARE** making highways out of garbage and peanuts into milk... They are counting insects by computer... They are growing lettuce in moon soil, so as to be prepared when the first lunar farm gets underway," writes John Fallows says.

"Under that farmland sky, amid the gentle zephyrs from the swine-land and the music of marching Aggie band, there is a miracle underway that has nothing to do with beating the University of Texas in football. If the Family of Man ever has reason to thank our state, it will not be for the Astrodome or the chicken-fried steak, but for off-riculed, much maligned Texas A&M. The university best known for its shaved-headed, brown-shirted Corps and a massive inferiority complex is producing the innovations

that will feed the hungry, clothe the poor, and not incidentally, enrich the people of Texas."

The article goes on to list the tons of research by A&M and of the various impressive departments of study in fields other than agriculture including medicine, oceanography, weather, and aviation.

**THE WRITER** also had much praise for a now-resident of Plainview, Mr. J. Roy Quimby, and referred to him as "Mr. Grain Sorghum" for his outstanding contributions in the creation of hybrid sorghums. Grain sorghums had had trouble producing significant yields in the High Plains of Texas, and the article says Texas farmers "had used catch-as-catch-can methods of selection" to find the right sorghum to grow.

"But it was only with the pioneering generation of sorghum breeders, led by Mr. Grain Sorghum himself, J. Roy Quimby of A&M (who later joined the Pioneer Hi-Bred Seed Company of Plainview, where he is not Geneticist Emeritus) that sorghum production left the Stone Age and moved into the modern era of high technology...."

Quimby and his associates began the work that would lead them to the first great breakthrough in sorghum production — the creation of a hybrid sorghum."

It's hard to brag on the Aggies, but it looks like they might be doing quite a bit in our behalf down there.

Does the weather affect our mood because of psychological factors or physical factors?

The changing weather affects the way we feel in both the real, physical sense, and the psychological. Changes in the pressure of the air affect us, as does the relative amount of moisture in the air, so that many people feel genuine physical "omens" and "signs" in advance of a weather change, and during certain periods.

The psychological effect is also great. Psychologists have found that some people associate cheerfulness with rain, others link it with bright, sunny skies. It depends, to a large extent, on childhood experiences and the business you are in.

Both of these influences must be taken into consideration in appraising the effect of weather on humans, which is sometimes quite great. Generally speaking, most people feel best, physically, when they are under a high pressure area of clear, dry air.

Casper W. Weinberger, Secretary of Health, Education and Welfare: "New scientific research has affirmed that cigarette smoking is a serious public health problem."

## The Corner Filling Station

Once upon a time, beginning in the twenties, when there was plenty of gas and no highway congestion, the corner filling station appeared to serve those preferring motor cars to horses and buggies.

The process continued until—a few years ago—one could enter a service station in America with confidence he would encounter smiling faces, personnel eager to serve and please the customer. Windshields were washed without a word being said, floors were often brushed clean, oil and water were automatically checked. And often there was a game, stamps or prize. Certainly there was a cheerful, "Thank you, come back to see us," as the motorist left.

The filling stations became personal refuges in America's smaller towns and cities, and in rural areas, and the owner or attendant would fix flats, repair the engine, fetch a stalled vehicle, etc.

Rapidly, the good old days, as described above, are disappearing. The trend is toward self-service. Many of the oil companies are buying up old-style stations and replacing them with self-service supermarkets. No extra service, just gasoline, and mostly self-service gasoline at that.

This began only sixteen months ago with the Arab oil embargo. And things are likely to get worse, until

the Arab states and Israel reach a peace settlement and Arab land now occupied by Israel is returned.

Israel, however, seems increasingly unlikely to turn the seized land, and is supported by most Senators and Congressmen, though President Ford urged such action. And even if there is a peace settlement, there's little likelihood prices will come down sharply in the near future.

The greatest loss to the average American motorist may not be the money spent on higher-priced gas, but the disappearance of the corner filling station which offered both fuel and personal service.

## BIBLE VERSE

"And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?"

1. Who spoke these words?
2. Upon what occasion?
3. Where are they recorded in the Bible?
4. What is a mote?

# Social Security Direct Deposit

## Sweetwater Savings' convenient income producing program for Social Security recipients

Federal regulations permit social security payments to be mailed directly to Sweetwater Savings' Social Security Direct Deposit account which is:

**PROFITABLE:** Your deposits will earn 5.25% compounded daily making an annual yield of 5.39%.

**NO SERVICE CHARGE:** Even though you can withdraw as you desire, there is no service charge from Sweetwater Savings or the Federal Government.

**INSURED:** All deposits are insured to \$40,000 by the FSLIC.

**CONVENIENT:** Requires no effort on your part. Social Security checks are mailed directly to Sweetwater Savings where it is deposited to your account automatically even

if you are on an extended vacation. **SAFE:** Avoid the risk of loss by theft or fire when away from home.

**FLEXIBLE:** Any part of your Social Security income can be transferred to your checking account automatically. Joint recipients, such as husband and wife, may leave one check in a Sweetwater Savings account and put the other into a checking account automatically each month. Withdrawals or transfers from savings accounts can be made easily as needed.

**EASY TO ARRANGE:** A Sweetwater Savings officer will help you fill out a form which permits the government to mail your check directly to Sweetwater Savings for deposit to your account.

## Farmers Union Opposes Grain Sale To Russia

(The following letter from Harry Hubbard, president of the Texas AFL-CIO and Jay Naman, president of the Texas Farmers Union concerning the grain sale to Russia was sent today to George Meany, president of the AFL-CIO.)

We are concerned about the chaotic conditions concerning food in this country. Soviet Wheat Sale 2 exemplifies these conditions. The proposed sale would again put Labor, farmers and consumers, at the mercy of grain speculators, the multi-national grain traders and the Ford Administration, which seems to be working far too closely with speculators and traders. It is time to stop the manipulation of food for private exploitation. We feel that overseas sale of grain is necessary

and desirable. It helps create jobs, helps farmers obtain a fair return on their investment and work, and helps create a favorable balance of trade.

However, it is in the best interest of Farmers and Labor that a national food policy be established to protect the interest of the farmer, the consumer, and the world's need for food. Under present conditions, the nation's food policy has been too often determined by speculators and traders in their own interests and this should be stopped by national legislation.

Creation of a national food policy by Congress should be a high priority. Sincerely, /s/ Harry Hubbard President Texas AFL-CIO /s/ Jay Naman

"The question I'd like to ask is, if the recession has ended, when does the next one stop?"

**Answers To Who Knows**

1. Frank Woolworth, Utica, N.Y., 1879.
2. Rest in peace.
3. William S. Burroughs, 1888.
4. Virgil Grisson, July 21, 1961.
5. Robert Perry, American explorer.
6. In 1775.
7. Benjamin Franklin.
8. Thirty-two square miles.
9. Raphael.
10. A collection of poems, stories, etc.

**FOOTBALL**

By Pete Fritchie

WASHINGTON, D.C.—John McKay made the college All-Stars a competitive team in the star-tilt with the Pittsburgh Steelers and for three quarters—as the Stars led the world champs—fans couldn't believe their eyes.

Going into the fourth quarter the Stars still held a 14-7 lead and had not one receiver dropped a pass about that time, the Stars might have gained field position to enable them to gain a tie.

But it was not to be. The Steelers dominated play solidly after the first quarter and deserved to win. The college stars, in fact, really can't be expected to play world champion pros an even game.

And that brings us to the question of changing the format of this game. Why not an All-Star pro team against an All-Star college team? Then neither group of players would have played together and it would make for a more even contest.

As it is, the Stars can't be expected to win for they give away an advantage of having not played together—to the best pro team which has trained and played together for years.

Until I became interested in sailing, I thought boats simply drifted with the wind. It hadn't occurred to me that few sailors would ever reach port in this manner.

And before I became earnest about church, I thought people's lives—their joys and disappointments, their achievements and failures—were largely a result of fate or fortune. Luck would long ago have replaced religion if this were true.

Now I know the thrill of sailing into the wind. Sure, tacking to port or starboard requires a zigzag course, and when your craft heels over at that precarious angle, it takes skill to control her. But that's part of the adventure—making headway against a strong wind.

Now, too, I know the thrill of believing in God. . . of setting a goal, of relying on His power, of devoting myself to reaching the destination. Making headway against adverse winds heels us over—but it's part of the adventure of being a Christian today.

*Favorite Recipes  
of Opal Richards*

**Forgotten Cookies**

2 egg whites  
1/2 tsp. salt  
1/2 c. sugar  
1 6-oz. pkg. chocolate bits  
1 c. chopped nuts  
Preheat oven to 350°. Beat egg whites and salt until stiff; gradually add sugar. Fold in chocolate bits and nuts. Drop from teaspoon onto greased cookie sheet. Put into oven; turn off heat and leave for 1 hour with opening door. Remove from cookie sheet. Yield 36 cookies.

**Wheaties Coconut Cookies**

1 tsp. soda  
1/2 tsp. salt  
2 c. flour  
1/2 tsp. baking powder  
1 c. shortening, 1/4 c. butter  
1 c. brown sugar  
1 c. white sugar  
2 eggs beaten  
2 c. coconut  
2 c. Wheaties  
1/2 tsp. vanilla  
Sift soda, salt, flour and baking powder. Mix shortening and sugar together; blend in eggs. Add coconut. Add sifted ingredients; mix. Add Wheaties and vanilla. Roll into balls, size of a walnut. Place on cookie sheet. Bake for 12 minutes at 400°. Yield: 4 dozen cookies.

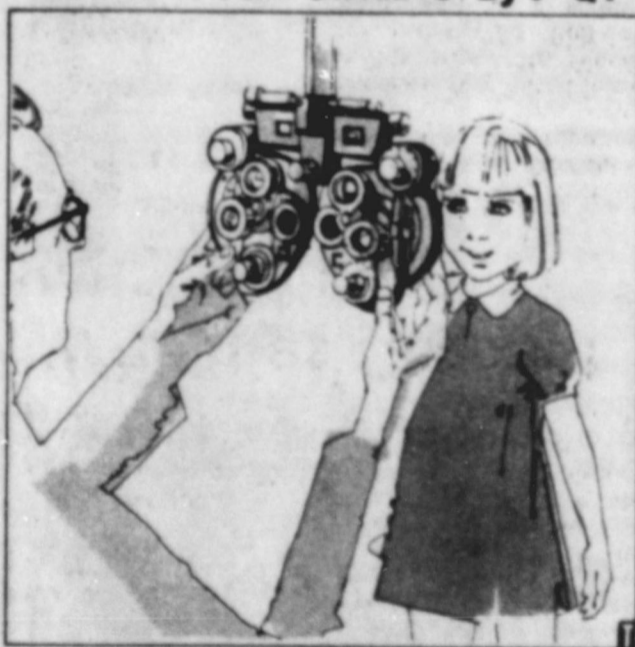

**Oatmeal Pecan Cookies**

1 c. shortening  
1 c. brown sugar  
1 c. white sugar  
2 eggs, beaten  
1 tsp. vanilla  
1 1/2 c. flour  
1 tsp. salt  
1 tsp. soda  
3 c. oatmeal  
1/2 c. chopped pecans  
Cream shortening, brown sugar and white sugar together. Add eggs and vanilla. Sift flour, salt and soda; add to sugar mixture. Add oatmeal and pecans, mixing well. Shape into rolls; chill in waxed paper and slice 1/2-inch thick. Bake, on ungreased cookie sheet, at 350° for 10 minutes. Yield: 5 dozen cookies.

**Sand Tarts**

1 c. oleo, 2 sticks  
2 c. sifted flour  
Powdered sugar  
1 tsp. baking powder  
1 c. finely chopped nuts  
3 tsp. vanilla  
Cream oleo; sift together flour, 1/4 cup powdered sugar and baking powder. Gradually add to oleo, mixing well. Stir in nuts and vanilla. Form centers with fingers and place on ungreased cookie sheet. Bake in 350° oven for 10-12 minutes, until done but not brown. Roll in additional sifted powdered sugar while cookies are still warm. Handle with care as they are very short and flaky at this point. Allow to cool before serving. Yield: 4-5 dozen.

**How's Your Child's Eye-Q?**

You may not know it, but poor vision is frequently the cause of reading problems, lower school achievement, and in some cases leads to anti-social behavior and even serious delinquency. That's why a child's vision should be tested frequently—with a professional eye examination before age 3 and annual eye examinations between the ages of 6 and 20. Many eye problems, if detected early, can be corrected either with lenses or exercises, so it's important that children have professional eye tests. In fact, 1 in 100 children between 3 and 5 has amblyopia, sometimes called lazy eye, which can be corrected if detected in time. Eye tests conducted at school are not at all sufficient. They only measure a child's ability to read an eye chart 20 feet away. Vision at reading range is not measured nor are coordination of both eyes, focus, astigmatism and eye disease. Sometimes eye problems lead to school or social problems, so be alert. If your child is having trouble with school, arrange for an eye check-up. It may not lead to the answer. But there's a pretty good chance it will.

**FAIR EXCHANGE?**  
DENVER—Mrs. Robert Schneider of Salem, Ore., lost her purse to a thief, in 1973. But it wasn't found until recently by an unidentified worker. The thief took \$500 cash from the purse but left jewelry valued at more than \$15,000.

**MANAGING YOUR FAMILY'S FINANCES**  
By Dr. Carl F. Hawver

Q. We've been married three months, and like most of our friends we've made a few purchases on credit. We sure don't want to bite off more than we can chew, but how can we tell? Credit seems so easy! Are there any signal flags that will let us know if we're getting close to the danger line?

A. There sure are! The first danger signal is when you have to defer payment of a bill because there just isn't enough money to pay them all. Another signal is when you make a part payment on a credit account, to try to give all creditors a little something on account. Another danger signal is when you have to defer the purchase of current necessities to pay old credit obligations. Do you sometimes depend on overtime or other uncertain income to pay normal monthly expenditures? Well, if you do, its another danger signal. And finally, if you have an open debt that has no maturity date, but allows you to pay just enough to keep you under a "perpetual debt" ceiling balance (revolving credit), this is a danger signal, too. Every credit obligation ought to have a definite termination point, established at the time the credit contract is signed.

Breast cancer mortality rate increases.

**ABOUT YOUR HOME**

By April Rhodes

Parents if you haven't gotten your first-grader's shots up to date, get busy. These are required by law.

Carry a pastel cardigan in polyester when traveling in hot weather. It's perfect for cool nights.

Since bright patches will adorn jeans and jackets for school wear, mom can sew a few on last year's jeans and they'll be up-to-date.

Vests are coming back with womens suits and the slim line is seen in many of the coats and other garments in the fall showings.

If you do not have an air conditioner to keep moisture out of your home, keep a small light burning in closets to keep shoes and clothes from mildewing.

Keep your small trash cans lined with plastic bags--a twist and throw the full bag into a larger trash container.

Be sure to date this year's packages for the freezer and use all left over food first.

With collarless coats there is usually a shawl scarf. If not a regular wool scarf may be worn.

Twin sweaters, the short sleeve snug one under the long sleeve cardigan, are popular.

**SOME MEAL**  
SAN DIEGO, CALIF.--Commercial fishermen harpooned a female great white shark, and thought it to be pregnant because of its girth, but it had eaten two man-sized seals, one weighing 175 pounds.

**COFFEE FUTURE**  
NEW YORK -- General Foods has boosted its wholesale coffee prices by 20 cents a pound for ground coffee and 3 cents an ounce for instant and freeze-dried brands.

Historians say that the art of seasoning was discovered by a man who wrapped his meat in leaves to keep it clean and discovered that the leaves had added a new and distinctive flavor to the meat, according to Marilyn Haggard, foods and nutrition specialist with the Texas Agricultural Extension Service, the Texas A&M University System.

One new look to accessorize today's dresses or skirts is signature hosiery -- forming a signature up the side of the leg. Beverly Rhoades, clothing specialist with the Texas Agricultural Extension Service, The Texas A&M University System, says.

**FOR DISABLED VETS**

The Senate passed and sent to President Ford a bill providing increases of 10 to 12 per cent in payments for two million veterans disabled in military service.

**GEM THEFT**

LONDON--Four raiders wearing stocking masks and armed with shotguns robbed a safe deposit center in London's jewel district and escaped with gems worth about \$2.2 million.

Wood new head of WFL Philadelphia Bells.

**Wedding Vows Are Exchanged**

Pamela Jo Kelley and Thomas Alan Hanke married Saturday in the First United Methodist Church. The Rev. Tom Ewing officiated. The bride is the daughter of Mr. and Mrs. Allen Kelley. The groom is the son of Mr. and Mrs. George Hanke of Spur.

Pianist was Mrs. Rose Murdock and soloist was James Prochaska. Maid of Honor was Minette Geeslin. Bridesmaids were Tanya Williams of Andrews, Kay Williams of Post, Beth Alexander of Irving and Kathy Tibbels of Rotan.

Flower girl was Rose Murdock.

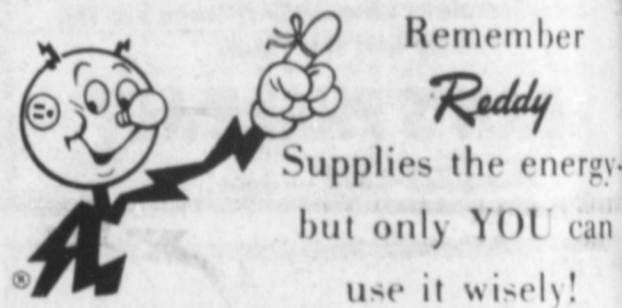

Best man was Bob Hanke of Spur, brother of the bridegroom. Groomsmen and ushers were Allen Murdock, Bobby Kelley, brothers of the bride, Steve Kidd and Mike Wilson of College Station.

After a wedding trip to Ruidoso, N.M., the couple will live in College Station.

Graduates of Jayton High School, the bride and bridegroom are attending Texas A&M University where she is a special education major and he is a bio-chemistry major. The bride attended McMurry College where she was a member of Delta Beta Epsilon social club.

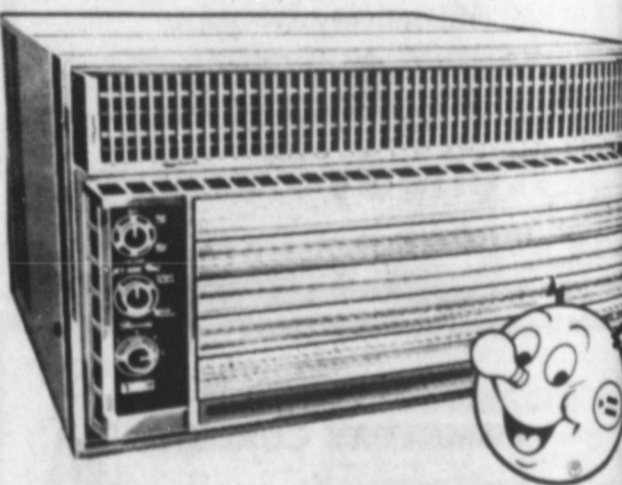

**Lucky Pup**

"There are direct and indirect taxation. Give me an example of indirect taxation."  
"The dog tax, sir."  
"How is that?"  
"The dog does not have to pay it."

**Remember Reddy**

Supplies the energy... but only YOU can use it wisely!

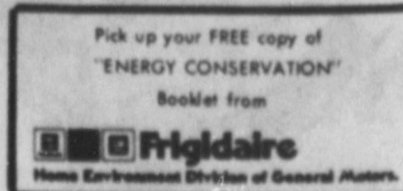

**Reddy's helpful tips for your Room Air-Conditioners**

Your air-conditioner will operate inefficiently if filters are not cleaned regularly. Dirt and lint, collected on the filters, restricts air flow to the coils. Clean filters every two weeks.

Let nature help you save energy by shading your home with trees and shrubs to help cut down on summer cooling costs. Draw draperies against afternoon sun.

Remember to keep outside doors, windows, and fireplace dampers closed. If you have window units, close the heating vents near the floor, as cool air falls and can escape through vents.

You purchased fine home comfort when you bought your air conditioning unit. Properly maintained, it will offer you years of efficient service. A once-a-year check-up by your dealer pays dividends in savings on operating and breakdown costs.
