## Community Suggestion Box

In an effort to stimulate more interest in our fair city, the Rotan Lions Club is sponsoring a Community Suggestion Box. Here is a chance to get your ideas recognized.

You are urged to send your suggestions as to what you think Rotan needs or should do. All citizens are urged to participate. All you need to do is send in your suggestions on a postcard or piece of scrap paper, addressed to Rotan Lions Club care of Rotan Advance. Send as many suggestions as you like. To sign your name is not necessary.

Let us all push Rotan and make it a better place to live, work and raise our families.

## Suggestions For Improving Rotan Are Continuing

The original plan was to end the project this week and survey all suggestions to start some movement, but a number of good suggestion letters were received and interest seems to be mounting, so the plan will remain open for a short time.

Everyone is urged to make their suggestions. You may have something that is practical and just what Rotan needs.

**Air Force Restoring Buddy Recruiting Plan**

The local Air Force Recruiting representative, Sergeant Harp, announces that it has been a long time since the Air Force Recruiting Service could recruit for "Buddy" flights or groups. The restoration of the buddy system is mainly due to an accelerated quality recruiting program. The special "Buddy" flight program means that young men from this area can enlist with their friends and join an Air Force "Buddy" flight which assures them of traveling and training together with hometown friends at Lackland Air Force Base, Texas. Sergeant Harp said that it was possible that friends may stay together during other technical training schools if they have the same qualifications, abilities and desires. This special plan will be available for a short time only, according to Sergeant Harp.

The Air Force recruiter stated that those interested in joining a "Buddy" flight should contact the Air Force recruiting office at the Postoffice bldg. in Sweetwater every Thursday for full details. He emphasized that two or more may join the Air Force under the Buddy plan.

That depends. By today's standards, he probably is. By standards ten years from now, perhaps not. How can that be? Is his I. Q. likely to change? No. But conditions are. Many college classrooms are crowded today. By 1967, applications are expected to double. Low salaries are driving too many qualified teachers into other fields. By the time your child reaches eighteen, there may not be any room for him in any college. This is a frightening situation. Now is the time to put a stop to it. Help the college or university of your choice now. The rewards will be greater than you think.

### About Your HEALTH

A weekly public service feature from the Texas State Department of Health. HENRY A. WOLLE, B.S., Commissioner of Health.

Births outpaced deaths by a ratio of 3.5 to one in Texas last year, provisional State Department of Health figures show.

The Department's section on records and statistics counted a total of 248,700 births for 1959, as against 73,753 deaths. That's an increase of 174,947 births over deaths during the 12-months period.

The 1959 births represents an increase of 3,194 over the 245,606 births recorded during 1958. State Health Department satatistics described the 1958 birth rate as the "lowest in several years", but do not speculate as to the reason.

The 1958-1959 death rate remained fairly constant, with an increase of only 310 between the 1959 figure and the 73,443 deaths registered in 1958.

The 1959 excess of births over deaths represents a natural population increase of 1.9%, the Department pointed out.

The Department's section on rec-10 year period between April 1950 and April 1960, there had been 2,351,464 births registered, compared with 683,244 deaths, for an excess of 1,668,220 births over deaths during the decade.

Disregarding immigrations and migrations, this represents a natural population increase of 21.6% over the 1950 Texas population of 7,711,194—contrasted to an increase in population from births alone of 20.2% for the preceding decade between 1940-1950, the Department said.

and evaluation center will shortly be opened within the Texas Medical Center in Houston, under auspices of the Texas State Department of Health, Baylor University of Medicine, and the U. S. Children's Bureau.

Complete physical and psychological examinations will be made of all children accepted for service, sponsors said. The clinic's staff will consist of a medical director, medical social worker, psychologist, and a public health nurse.

Project sponsors said funds amounting to some \$65,000 to \$75,000 annually are presently on hand to operate the clinic for five years, after which its future will be contingent on the availability of additional money.

## New '3 R's' Golden Rule For Insulation

Just as sound education always has depended on a thorough knowledge of the "three R's," so does efficient, low-cost air conditioning in the home today.

The "R's" in this case are not the well-remembered "readin', ritin', and rithmetic." Rather, these "R's" stand for "resistance" to the flow of heat—the most important factor in good, economic air conditioning.

The new "three R's" are the result of years of scientific exploration by the mineral wool insulation industry to discover the exact formula that would result in the lowest-cost, yet most-efficient air conditioning for today's homes.

The "R" method is based on exhaustive calculations that show that a home to be air conditioned (or heated electrically) requires a given amount of resistance to heat flow for the equipment to be practical economically as well as to make the house completely comfortable.

To combat heat flow, mineral wool engineers worked out performance standards for insulation resistance in the three areas where heat penetrates or escapes—ceilings, walls, and floors. These resistance standards are R-19 for ceilings, R-11 for walls, and R-13 for floors.

This standard conforms to the new All-Weather Comfort Standards developed by electric utilities and manufacturers of air conditioning and electric heating equipment.

For the most efficient, low-cost air conditioning available today, families who plan to build or buy an air-conditioned house should insist that the ceilings, walls, and floors be insulated with mineral wool batts and blankets bearing these "R" numbers.

## EXODUS ENDING?

Sociologists now feel that the low cost and ready availability today of air conditioning may keep more families from moving out of cities to suburban areas.
